## Microvax II debuts; users give high marks

By Ite Bunker  
CW Staff

BOSTON — Digital Equipment Corp. last week unveiled the Microvax II, said to run all VAX software and to give VAX-11/780-level performance at a fraction of the cost. The system gathered bouquets from early users and analysts following its formal debut here.

"We're very pleased with the machine," said Richard Newton, a professor of computer science at the University of California at Berkeley, a Microvax II beta test site. "We can't fault it so far. It's the first machine to reach this level of price/performance."

Its performance was better than we would have expected," said Al Hagen, president of Caddex Corp., a DEC OEM in Woodville, Wash. "We really

have now taken the power of a large computer room right out to the people."

George Colony, president of Forrester Research, Inc. in Cambridge, Mass., also applauded the supermicro's price/performance characteristics and gave it a favorable overall review. Colony joined other analysts, however, in suggesting that the machine will allow more other VAX machines out of the limelight.

"DEC is going to eat some of its children, specifically the 11/725 and 11/750," he said. "I think the 11/750 will be threatened as well."

DEC officials did little to squish this speculation, making no apparent moves to repudiate or otherwise reposition the existing line. Asked about plans for machines caught between the high-end VAX

## Breaking up easy to do for Bell MIS

By Paul Karszenowski  
CW Staff

MIS departments at the former Bell operating companies have thus far been sheltered from the postdivestiture trauma of separation from AT&T, according to interviews with MIS managers at the companies.

The trauma in other quarters has been well documented. Customers were added with confusing service policies as AT&T and the former operating companies tried to determine who was responsible for what. The divested operating companies tightened their belts by significantly trimming their staffs. Ameritech, for example, has cut approximately 7% of its 112,000-member work force, and U.S. West has let go 12,000 workers.

Despite such changes, MIS managers at the former operating companies report that life for them today does not differ very much from predivestiture days. "I doubt anyone would say that there have been drastic changes since divestiture," said Daniel Munster, manager of capacity planning at D-Link Bell Telephone Co.

Even though former operating companies reduced personnel, data processing managers report that their staffs have increased or at least remained stable. "Our staff has increased by approximately 10% this year," said Thomas Gallagher, information system organization assistant vice-president at Sysnex Corp.'s New England branch. The

## Corporate moves: A tale of two DP shops

### With local division's buy out, DP center starts from scratch

By Tom Henshaw  
CW Staff

WEIRTON, W. Va. — Almost every DP executive has occasionally wished for a magic wand that, with a wave, would make the firm's data center, applications handling, irate users and incompetent employees permanently invisible.

For most executives, miracles never happen. But for a group of former DP workers at National Steel Corp. here, the dream came true.

National Steel's parent company, National Intergroup, Inc., decided in 1983 to close its Weirton Steel Division and consolidate its DP operations here and at another data center in St. Louis. Its purpose was to form a for-profit center, Genix Corp., in Pittsburgh, giving some DP employees here an almost unprecedented chance to start over with a clean slate.

Employees at the Weirton Steel Division had voted to buy the division from National Intergroup under the federal Employee Stock Ownership Program. As a division of National Steel, the Weirton Steel Division had one of National Steel's DP services. Now, as Weirton Steel Corp., it had to build its own data center and hire the staff to run it.

### DP center-turned-business finds mind-set must change

By Clinton Wilner  
CW Staff

PITTSBURGH — Here in the heart of steel country, the parent company of one of the nation's largest steel producers, National Steel Corp., is hoping to forge profits in data processing. The new direction has turned National Steel's former DP operation into a full-scale business.

That business, called Genix Corp., began its for-profit operation Jan. 1 in a multimillion-dollar data center on the site of a former apple orchard 16 miles from downtown Pittsburgh. Although most of its current customers are other subsidiaries of the \$2.3 billion parent firm, the National Intergroup, Inc., Genix said it believes it has the hardware (an IBM 3061, 3063 AP, 3063 MP and two 870/186s) and the talent to become a significant player in the business of contracted DP services.

Genix grew out of the consolidation of National Steel DP centers in St. Louis and Weirton, W. Va., in 1983. Turning a DP department into a business required more than a diesel-generated backup power system, new mainframe and major upgrading of communications and data security. It also required a complete mind-set turnaround.

# N.J. transmissions hazardous?

## Group blames birth defects on earth stations' microwaves

By Paul Hattis/University of Iowa

VERNON, N.J. — A citizens group and three satellite network vendors here are locked in a Love Canal-like debate.

This rural village houses major ground station facilities for three domestic satellite communications carriers: RCA American Communications, Western Union Corp. and American Satellite Co. Vernon's hills buffer the city and create a radio-free zone, enabling clear terrestrial transmissions. Vendor earth stations ship voice, video and data information to satellites that relay the information to receiving microwave dishes on the Eastern seaboard.

Recently, Citizens Against the Towers (CAT), formed in 1982, charged that the earth stations have caused an abnormal number of health problems here, a claim that the vendors deny. CAT has 300 members; Vernon's population is approximately 15,000.

Not enough cases to signify problem

When CAT was formed, it lobbied the New Jersey Board of Health to conduct a study to determine if incidences of Down's syndrome had increased since the first tower was built in 1975. Last summer, the state released the study. It found three cases of Down's syndrome, one more than statistical averages but not enough to signify a problem.

When the report was released, CAT challenged the findings. "CAT found 10 cases of Down's syndrome, 500% more than normal," noted Elise Kreindler, CAT vice-president. "We wanted to see how accurate the state's information would be. The state searched only for addresses where Vernon was listed as the city. It should have also included addresses of Vernon borough. The boroughs are part of Vernon." The state has decided to reopen the study.

In addition to the increased incidences of Down's syndrome, CAT reported that there were high rates of other birth defects, including chil-

dren born with clubfeet, heart problems and dislocated hips. CAT has claimed that some citizens are in direct line with microwave transmissions and are constantly being exposed to radiation that has caused the health problems. "Two women who lived next door to one another within five days gave birth to children with Down's syndrome," Kreindler said. "What are the odds of something like that happening?"

Although earth station facilities have been used for a number of years, there has been no indication that their transmissions create health problems. The universal belief has been that the transmission waves are very narrow and do not disperse enough radiation to create any health problems, according to Lewis Slesin, editor of "Microwave News," a newsletter based in New York.

In addition, the Federal Communications Commission licenses each facility. Before licensing a facility, the FCC determines if the facility will raise local radiation levels above those considered safe, according to an FCC spokesman. The FCC approved the Vernon facilities.

Vernon officials side with vendors

Thus far, Vernon municipal officials have sided with the vendors. The citizens group has objected to the towers' locations, which are within a few blocks of four elementary schools. The city plans to open another elementary school in the tower areas. "The zoning board does not believe that there is a problem with the facilities," Kreindler noted.

Archie Miller, manager of spacecraft operation at the RCA facility, stated, "My six children have gone to the Vernon schools. I would not send them to school there if I believed that there was a health problem."

Evidence seems to indicate that there is a health problem in Vernon, however, according to Slesin. "The question is, 'Are the health problems related to the microwave facilities?'" he said. "There seems to be no other obvious reason, such as a waste dump, for the problem."

Miller claimed that Vernon's radiation level is very low. "Radiation levels are much higher in Manhattan," he asserted. He noted that RCA has facilities similar to those in Vernon in cities throughout the U.S., including Los Angeles, Houston and Atlanta.

# ADR INVENTED MIGRATION SOFTWARE SO YOUR COMPANY CAN MOVE AHEAD WITHOUT FALLING HOPELESSLY BEHIND.

"Next time Bigelow, look before you quantum leap."

If your company is growing, you've probably realized your old data base management system (DBMS) just can't do all the things you need it to do. It takes too long to write programs, it won't give you the information management needs and it's nearly impossible for end-users to figure out how to use. So it's time you moved to a new DBMS.

But conversion is like trying to change a tire on a moving car. It requires that you practically rebuild your entire data processing system from scratch and maintain your existing services while doing so. And the applications backlog, the very thing you hoped this new technology would reduce, ends up growing bigger in the process.

That's why we invented Migration Software—software that automates the awesome conversion process.

With the new ADR/DLI TRANSPARENCY™ and the ADR/VSAM TRANSPARENCY™ you can migrate from your existing DBMS to our high performance relational DBMS, ADR/DATACOM/DB™, and your existing applications will run exactly as they did before. Without modification. At last, you can convert without having to rewrite all your applications.

ADR Migration Software also reformat your existing data. Automatically. And the ADR/DLI TRANSPARENCY even designs your new data base. So the conversion is quick, cost efficient and virtually error free.

And now programmers can use powerful 4th generation productivity tools like ADR/IDEAL™, relational query languages like ADR/DATAQUERY™, and decision support systems like ADR/EMPIRE™. And even end-users have easy access to mainframe data through their own personal computers, using ADR/PC DATACOM™.

If you're ready to move up to the new relational technology, mail us the coupon. Or call 1-800-ADR-WARE and we'll show you how your company can grow without the growing pains of conversion.

# First user of Amdahl 5868 finds software advantage

Usually conservative Miss. agency takes system plunge

By Jeffrey Marder  
Chicago Office Writer

JACKSON, Miss. — "We tend to be a fairly conservative organization," according to Alex Epperson, computing center director for the state of Mississippi's Central Data Processing Authority (CDPA).

"Being the first ones to install a new system is not something we usually like to do. We like to let other people take the risks and find out where all the problems are."

Recently, however, the CDPA departed from its customary conservatism and did something comparatively radical. On May 5, the organization officially became the first commercial user of Amdahl Corp.'s 5868, the smaller of the two multiprocessor members of the vendor's 5800 series of IBM-compatible CPUs.

What made the installation doubly adventurous for the CDPA was its keen awareness that it was acquiring a mainframe with a less than spotless track record. In May 1984, fewer than three months after the 5800's introduction, Amdahl announced an indefinite deferral of all shipments of both its multiprocessor models, which include the top-of-the-line 5880.

The delivery delays made Epperson and his associates think twice about becoming guinea pigs for the previously untested 5868. "They [the deferrals] definitely concerned some of us," he recalled.

Thus far, the CDPA apparently feels no regrets about its unprecedented decision to boldly go where no other Amdahl user has gone before. The reasons for the organization's initial optimism are manifold. First, as a multiprocessor model built

around two Amdahl 5860 processors, the 5868 reportedly satisfies the CDPA's critical need for system redundancy. "No single component failure will cause the whole system to stop," Epperson said. Second, the 5868 roughly equals the computing power of an IBM 3081 Model KX and thus greatly surpasses the combined performance of the two Amdahl 470 series processors it replaced.

But because it runs in single-image mode, the multiprocessor mainframe can simultaneously support two sets of system programs with just one

79

*'Being the first ones to install a new system is not something we usually like to do. We like to let other people take the risks and find out where all the problems are.'*

— Alex Epperson  
Mississippi's Central Data Processing Authority

software license. Previously, the CDPA paid for two such licenses, one for each CPU.

By eliminating unnecessary second-site license fees, the 5868 can pare the organization's software expenses by about \$40,000 per year, Epperson said.

As its name suggests, the CDPA furnishes centralized computing services for all the state of Mississippi's government agencies. In all, the organization is said to support some 60 end-user entities.

Until early this month, the CDPA relied entirely for its information processing resources on two

older model Amdahl CPUs — a 470V/6 and a 470V/8. But like most other large MIS centers, "we have recently experienced tremendous growth in demand for DP services," Epperson said. The increased burden, in turn, eventually outstripped the two existing processors' available capacity.

Later last year, Epperson and his coworkers began looking for potential 470 series replacements. They deliberated longly their search to maintain frames that could be readily upgraded to an even larger model and that could continue to operate despite a major component failure.

"We're a 24-hour-a-day, seven-day-a-week operation," Epperson explained. "We can't ever afford to be down."

The CDPA also required its prospective acquisition to support Extended Architecture (XA). "We expect to begin converting to MVS/XA in a month or so because our virtual storage is very constrained," Epperson said. "We currently run six CICS regions plus two CICS test regions under MVS/SPF 1.3] and have little room for future growth."

To pave the way for the proposed XA upgrade and to overcome its severe storage limitations, the CDPA early this year began issuing formal requests for CPU proposals. The invitations brought bids from several hardware suppliers and prompted the systems agency to evaluate several processor models, including the IBM 3081 Model KX, 3084 Model Q and 3084 Model QX as well as the Amdahl 5867 and 5880.

In the end, though, Epperson and his colleagues rejected all the other options in favor of the 5868, which can be upgraded to the 5880 and which reportedly provides better backup capabilities than the 5881. For the CDPA, the smaller Amdahl multiprocessor also offers more appropriate level of price/performance than the 5880 or 3084, Epperson said.

## Calif. sets ergonomics rules

SACRAMENTO, Calif. — Just one day after an ergonomics bill died in the California legislature earlier this month, the California State Office of Information Technology issued ergonomic guidelines for competitive bidding requirements on VDTs and office equipment.

The guidelines will be included in bidding specifications for equipment for state agencies, according to Joseph Pujala, DP manager for the Office of Information Technology.

VDT screens, keyboards and office furniture are addressed in the guidelines, which apply to equipment used

by one operator for four or more hours a day. Bidding requirements will include requests for screen brightness and contrast controls, glare reduction screens, an adjustable terminal base and a minimum dot matrix composition of 5 by 7 pixels, Pujala said. Office chairs must be adjustable for height and backrest positions, the guidelines said. Desks and tables must also include adjustable features, according to Pujala.

California is the fourth state to implement guidelines on VDT purchases, following New Mexico, Massachusetts and Wisconsin.

### CORRECTIONS

Esco-DOS, the IBM Personal Computer-based decision support system announced recently from Esco, Inc. is available immediately, not in the fourth quarter [CW, May 6].

Due to incorrect information supplied by the vendor, a March 11 product announcement stated that Data 3 Systems, Inc.'s MRP/30-A Financial Accounting Package is available for the IBM System/34 and 36 minicomputers and that the package costs \$94,000. Data 3 Systems' financial accounting package is available only for IBM's System/36 minicomputers for a price of \$36,000.

The correct address of Escocomp, Inc., maker of Name Base software, is 630 S. Belmont St., Indianapolis, Ind. 46221.

ACPF was developed and is maintained and supported by SKE, Inc. of Rosemont, Ill. [CW, April 22]. The software security product is marketed in the U.S. and Canada by the Cambridge Systems Group, Inc., which is headquartered in Los Altos Hills, Calif.

A recent report of an International Data Corp. survey of the IBM 3270 marketplace [CW, May 13] incorrectly stated that shipments of 3270-type terminals would start to decline in 1986. IDC predicts the growth of the 3270 market will begin to decline in 1990.

The correct name of the vendor of Protocol/Online [CW, April 22] is Software Info Services, Inc.

# SMART COOKIE

Like you,  
**SyncSort DOS**  
is cut from  
a special mold.

Call (201) 568-9700.

It's healthy  
for your  
system.

**syncsort**  
INC.

One thing about smart cookies, they can spot each other a mile away.

While they don't flaunt their derring-do, they quietly know they're the best at what they do. Because substance shows through. Every time.

Especially when the going gets tough. And rough. As it often does in a DOS environment.

For example, a smart cookie doesn't crumble under the pressure of too many programs and too few programmers.

A smart cookie doesn't waste dough — but picks and chooses the right ingredient to keep production on the rise.

And sometimes, even, a smart cookie has to be a mighty tough cookie. That means being on the job constantly. Keeping things running and humming. Without draining vital resources.

All of which brings us to our smart cookie: SyncSort DOS. A cut above the rest if you ever saw one. Check these delicious advantages.

#### Better Performance

Pop one into your system and you'll see a mouthwatering difference. Immediately. SyncSort DOS will give you performance improvements like those shown in the chart on the left.

And performance features such as:

- **Automatic Secondary Allocation.** With this feature your sorts will never run out of disk space, i.e., no "sort capacity exceeded" messages.

#### Better Features to Improve Programmer Productivity

As you begin to digest SyncSort DOS, you'll find it more and more to your liking. With ingredients that cut down to size the amount of programming time going into applications.

- **SortWriter** — A powerful tool that can produce extensive reports as a by-product of your normal sorting — without user exits and the associated programmer investment. Headers, trailers, total and sub-total capabilities provide flexible formatting.
- **Record Formatting** — Powerful features like INCLUDE/OMIT, INREC/OUTREC, SUM and others — with capabilities like data conversion, editing, insertion of literals.
- **Multiple Output** — From a single sorted file, you can create multiple files and reports. Each can include the same or different data as determined by INCLUDE, OMIT, OUTFIL or OUTREC parameters.

#### Better Customer Service

Still another sweet advantage of SyncSort DOS: help is always there when you need it. 85% of all requests for service are resolved within 24 hours. We always rise to the occasion.

The moral to this story: smart cookies are quick to reject half-baked solutions in favor of SyncSort DOS. Call us for a demonstration. Once you get a taste you will be hungry for more.

**SyncSort DOS**

**One smart cookie deserves another.**

Syncsort Incorporated 560 Sylvan Ave., Englewood Cliffs, N.J. 07632

## NEWS

## GENIX

from page 1

"We had to teach our people that there is now a customer on the other end, not just a user from another department," said Paul J. Buchta, Genix manager of operations. "That training was at times as basic as not letting the phone ring more than three times before answering it."

The addition of accounting, marketing, sales and advertising departments differentiated Genix from its former status but the transition within its data processing operation itself has been no less profound. "We have made a definite shift from systems software to applications software for our users and all that that entails," said Harry R. Matthews, systems programming manager. "We have to be a lot more attentive to what's on the market. As a DP department, we would meet with the other departments probably once a year, and 90% to 95% of the software for that year would already be in place. Now the customers want to know what's available for their needs, and we have to meet [their] needs," Matthews said.

Applications development has become a major focus at Genix, and software packages such as Cimscom Systems, Inc.'s Mantle and BOS Systems, Inc.'s Best/I have been purchased to promote it. "In the past, we only did the suits and bolts stuff for our

users," said Cecil Weston, director of operations. "Applications development was handled by National Steel's management services, not in the data center."

Genix officials claim that such added responsibility, as well as the need to turn a profit, have spurred some unexpected ideas from the DP staff. Buchta has personally volunteered to boost the Genix effort to use federal government business, and one programmer is working on his own data base management software for large corporate building maintenance budgets.

"We were pleasantly surprised at how quickly the entrepreneurs surfaced around here," said Joseph Murphy, vice-president of operations and technology. "People can do things that they were never able to do before."

Automated budget control has created both responsibility and opportunity for Genix. While the former cost center has had to instill bottom-line awareness in every employee, Genix now has much more flexibility in upgrading both hardware and software.

"It used to be quite an ordeal to get our equipment," Matthews said. "Now, with our customer orientation, we can tell them, 'Sure, we can do that; here's the price.' Before, our hands were tied because it didn't fit into our budget."

Microcomputers used to be a scarce commodity

in National Steel DP. Now the IBM mainframe shop also includes 15 AT&T 6800 Personal Computers, four Digital Equipment Corp. 386 ProMinors, Computers, two Apple Computers, Inc. Macintoshes and other micros. "Every customer wants to ask our advice on upgrading or downsizing from [mainframe computers]," Matthews said. "What education could we offer if we didn't use them ourselves? We had to get on board quickly, and we have."

## Customers free to choose DP services

Genix President Raul Pupo pointed out that Genix's six customers under the National Inter-group corporate umbrella (National Steel, National Aluminum Corp., National Mining Corp., Ball Mason Tube Corp., Distribution Group Co. and the parent company itself) are free to choose any data processing service they wish, but they all have stayed with Genix. The data processing firm's current outside customers are Philadelphia Electric Power Co. and Comel, Inc., a Chicago-based software development company.

Pupo is seeking more firms like Comel for Genix's initial target customer base. "We want to establish a track record with large software developers to help sell ourselves to other [customers]," Pupo said.

Genix expects to break even in its first year, although Weston admitted that the transition from a National Steel department to a newly created contract business presents a marketing problem. "It is a pain," he said. "People think we're a small start-up, but we've been doing data processing for 50 years."

## STEEL

from page 1

But attracting employees required more than an ad in the local paper. When employees voted to buy the Weirton Steel Division, they also agreed to take an overall 32% pay cut. That pay cut was clearly a disadvantage in attracting new employees, especially since the main targets of the hiring drive were displaced National Steel DP workers familiar with the operations at Weirton Steel.

"I worked for National Steel and had the opportunity to take over [at Weirton Steel] as manager of operations and software, so I came aboard," noted Bernie Waters, manager of operations and systems in Weirton Steel's management services group. "A few others came over from National Steel and had the chance to move into promotions in other areas. We brought some of the better technical people [from Weirton's] applications area into software. The operations staff was already a member of the bargaining unit, so they stayed. And some of the supervisory people came from National Steel. So we built

the data center around that core of people."

After finding enough DP professionals to accept positions with the newly formed Weirton Steel, the next step was to establish a data center.

"Naturally, since [National Steel] was selling the division, [it] wanted to move the data center out of here and up to Pittsburgh. In the transition, [it] left us an IBM 3033 AP, software and some disk drives. We took over running that as [National Steel] was moving out," Waters recalled.

Weirton Steel initially rented the 3033 from National Inter-group for use as an interim system until it could design its own data center. The software left behind by National Steel had been tailored for use in a much larger, more diversified corporation. Furthermore, most of the National Steel tailored software

had become outdated.

"Since we were starting fresh," Waters said, "we decided to go with later models instead of keeping the 3033s. We were looking at getting one year 3061 but decided we'd rather have two [machines]. So we got two 3063 Model EXs, which are about [6 million instructions per sec.] machines, with 16M bytes of memory for redundancy. We are running [them] 24 hours a day, seven days a week, so we can't afford our data down. Everything is symmetrical: There are two communications controllers, and we have everything set up so that if we lose one system, we have a backup," Waters said.

Weirton's second 3063 is also used for production work and serves as a development processor for the company's TSO users, Waters noted.

In making the switch from the 3033 AP to the two 3063s, Weirton Steel decided to migrate from IBM MVS/SP operating system to the newer MVS/XA operating system.

## Lead time for XA conversion

"We said, [Extended Architecture (XA)] is coming, why not do it now so that when we have those [machines] loaded up and don't do the XA conversion, it seemed like a logical way to [make the conversion]. We didn't need it for performance increases or virtual storage relief or anything like that," Waters said.

But migrating to MVS/XA was only part of Weirton Steel's software challenge. The newly hired DP staff had to sort through all the software left behind by National Steel and determine which packages were usable.

"In the case of the purchased packages, we replaced about 90% of them with equivalent or better software to meet our needs," said Antho-

ny J. Santilli, director of management services at Weirton Steel. "Of course, internally developed software [National Steel] left us, so we took what we had, cleaned it up and eliminated the bells and whistles," Santilli said.

With the evolution process completed, Weirton Steel now considers itself ready to begin developing some of its own software to perform functions that were not available when National Steel was running the Weirton mill.

## Develop PDI

"We are now in the process of developing an environment that previously did not exist at Weirton, which we are calling our Process Information Network (PIN). We are going down to the mill floor, and we are going to attempt, over an extended period of time, to acquire mill floor information [stored in Digital Equipment Corp. PDP-11-based process control systems] and turn it around to those people involved in the production of steel, and send that information to the product out the door," Santilli said.

Once the PIN is established, Santilli said, control of it will be turned over to the corporate operations department, although the MIS department will probably maintain the systems.

Santilli said a major emphasis in the Weirton Steel management systems department has been to maintain contact with the intended users of systems.

"I see a lot more acceptance of the role of the management systems than I did at National Steel," Santilli added. "When someone has thrown stones at you for years because you didn't do the job well, which is the environment most MIS organizations get into over time, it becomes very difficult to acquire things. We came in, we had a clean slate, we asked for feedback, they gave it to us, we did it. We basically have a good relationship. We have been accepted by our management. Until we fell flat on our faces, we will get all the support we want to get."

## Stuff it to JES

## CICS, DBPrint, RJE, and SAS® Reports

The Dynamic Report System provides a bridge between on-line systems and the JES report queues. Move it all to JES and gain performance along with convenient report distribution. Let JES account for, archive and distribute reports to 3270 printers, local printers, PCs, plotters, microfilm devices and 3270s.

## And Let JES Distribute Your 320X Reports

VPS, the VPM/CMS Printer Support subsystem places 320X/320X printers, PCs, plotters, 3270s, and word processors directly under JES. These non-routable devices become JES 380 print stations. VPS expands JES's local and remote hardcopy alternatives as it reduces real network costs and complexity. Ask our 400 users and their 20,000 printers.

# Prime adds Unix environment for 50 series users

By John Sweeney  
CW Staff

NATICK, Mass. — Prime Computer, Inc. joined the growing body of superminicomputer vendors offering a Unix standard with its announcement last week that AT&T's Unix System V is available for its 50 series minicomputers running Prime's company's mainstay operating system.

Prime's offering, dubbed Primix, runs co-resident with PrimeOS. Users can switch back and forth between the two operating systems so that Prime users have access to applications written for PrimeOS, a Prime spokesman said.

The kernel of PrimeOS Release 18.4.3 was modified to include Unix functions, according to Ross Summers, systems and product marketing manager at Prime. Kernel support provides for file system stability and virtual memory paging support for the direct execution of large programs.

Prime has been working since June 1983 with Human Computing Resources Corp. of Toronto, a Unix systems house, to develop its Unix offering.

#### Prime features

Primix includes Prime's C compiler, source-level debugger, Emacs interactive display editor, data management and computer-aided design and manufacturing utilities and communications capabilities, including PrimeNet networking software.

Primix contains both the Bourne shell contained line interpreter developed at Bell Laboratories and the C shell developed at the University of California at Berkeley. Primix also contains Unix utilities used for program development, communications and text processing.

The Primix hierarchical file system is integrated with that of PrimeOS, so that files and directories created under one operating system can be accessed from the other. File system integration makes it possible for system users to choose between the two operating systems' file security systems.

Primix is available on all 50 series systems, 2250 through 9060, and requires Release 18.4.2 or later of PrimeOS.

In the initial offering, one version will support up to 16 simultaneous users, while another version will support up to 32 users. Prime said a future version will support up to 64 simultaneous users.

Primix licenses are priced according to hardware used and number of simultaneous users supported. Prices range from \$7,000 for support of 16 users on a Prime office system to \$15,000 for 32 users on a Prime computer room system. Shipments are scheduled to begin in July.

#### Implementation in progress

One analyst noted that Prime's implementation of Unix is an effort to protect the company's investment in its proprietary operating system and applications software by satisfying users who are dissatisfied with Unix features.

But Damien Elzahi of International Data Corp., a Framingham, Mass.-based market research firm, questioned whether in its efforts to

achieve co-residency, Prime has made trade-offs that could affect system performance.

"I suspect [Prime] had to make some trade-offs, but the marketplace will determine whether it made the right decisions," he said.

Prime's Summers said trade-offs were minimal, because both PrimeOS and Unix had their origins in MIT's Multics project with Bell Laboratories and General Electric Co.'s Computer Division in the late 1960s.

Both Digital Equipment Corp. and Data General Corp. first offered Unix implementations atop their proprietary operating systems and later offered Unix in native mode. Summers said Prime has no plans to follow in

those firms' footsteps by offering Unix in native mode.

"What's important in the long run is to adhere to the operating system interfaces as a standard," he said. "How you offer the standard is immaterial."

#### Positive reactions

A spokesman for a New York-based Unix users group saw Prime's entry into the Unix world as positive.

"With the last few of these [hardware vendors] falling into place, it seems like Unix is destined to stay with us for a long time. Generally, it seems to be the answer [for] the end users as far as freeing them from the proprietary nature of operating sys-

tems," said Keith Elmsworth, a member of the Unixgroup of New York, Inc. board of directors, and marketing manager for Structured Methods, Inc. of New York, a Unix training and consulting firm.

George Ellis, district staff manager at New York Telephone Co. in New York, a large Unix user, said, "As an operating company formerly part of the Bell system, we like to see System V branch out. We are open to any vendor who offers good price/performance and support. As a Unix user, I like the fact that more and more hardware manufacturers are getting into Unix."

Prime is located at Prime Park, Natick, Mass. 01760.

## FAST ANALYSIS OF TAPE SURFACES

**1000 USERS** USE FATS TO CLEAN UP YOUR TAPE LIBRARY...

FATS will dramatically reduce costly error recovery and reprints caused by poor quality tapes. The FATS REPORT will help you determine which tapes should be cleaned, discarded or scrapped.

Use FATS to insure that your archival tapes can be read after years of storage and that old tapes will run on higher density drives.

## Profits spectrum: HP loses, PE gains

Hewlett-Packard Co. last week reported that second-quarter profits declined 10% from those of the corresponding period of a year earlier. The company said it expected the current economic slowdown to continue for several months and reported that incoming domestic orders for the second quarter were down 6% from the year-earlier level.

In an opposing vein, Perkin-Elmer Corp. overcame a slump in semiconductor equipment orders to post a 56% third-quarter profit hike on a revenue increase of 13%.

John A. Young, president and chief executive officer of HP, said the second-quarter results "reflect the general gloominess being experienced by businesses throughout the U.S." The company posted profits of \$120 million, or 51 cents per share, down from year-earlier profits of \$167 million, or 87 cents per share. Revenue for the quarter was \$1.68 billion, up 10% from second-quarter revenue of \$1.52 billion a year ago.

In an apparent indicator that third-quarter results may show no improvement, the company said incoming orders for the second quarter increased only 1% over last year's second quarter to \$1.61 billion. Domestic orders were off 6%, but international orders were up 12% compared with a year earlier, according to the firm. However, Young said the company has also noticed growth moderation in international markets.

At Norwalk, Conn.-based PE, third-quarter profits were \$21.6 million, or 49 cents per share, compared with \$19.9 million, or 31 cents per share, reported a year earlier. Revenue was \$340 million, up from \$301 million, and the company reported that increases in its analytical instruments and computer segments offset a decline in semiconductor equipment sales.

### VAX from page 1

DEC and the Microvax II, DEC President Kenneth Olsen remarked simply that the Microvax itself "is the middle."

The Microvax II is built around two internally developed 32-bit very large-scale integration chips. The Microvax 78052 microprocessor implements a subset of the VAX instruction set and provides demand-paged virtual memory management, DEC officials said. A matching floating-point chip, the Microvax 78152, typically gives 80% of the 11/780's floating-point performance. System clock speed is 30 MHz.

The supermicro typically provides 70% to 110% the

throughput of the 11/780, with most applications in the 90% range, according to Jesse Lipcon, Microvax II product manager.

#### Limitations

Lipcon added that "there are some things the [11/780] can do that the Microvax can't" — primarily the ability to work in Vaxcluster — and there are restrictions on supported peripherals.

DEC Technical Group Vice-President Edward Kramer said that clustering support was not added because of expense issues and added that Decnet will provide many of the same functions. As more powerful Microvaxes become available, Vaxclusters will be supported.

Throughout the presentation, DEC officials emphasized the VAX family's potential for distributed computing, with machines running identical software at locations ranging from end-user desks to central computing facilities.

Four Microvax II configurations will be offered, ranging from an \$18,940 single-user model with 2M bytes of main memory and a 31M-byte hard disk drive to a \$43,780 16-user system with 3M bytes of main memory, 213M bytes of disk storage and a 96M-byte streaming cartridge tape drive. The single-user system is being delivered now, while other models will become available in June and July, DEC said.

The Micro-VMS operating system is sold separately, with prices beginning at \$2,000, plus \$1,000 for media and documentation, for a two-user license. The Ultrix-32m operating software, based on AT&T's Unix, also is available, with prices starting at \$1,000 for a two-user license.

The Vaxstation II, a graphics workstation based on the Microvax II CPU, also was introduced, with deliveries set for July. A starting system, with 2M bytes of memory, bit-mapped video graphics, a 19-in. monochrome monitor, dual floppy disk drives, a 31M-byte Winchester disk drive and Micro-VMS software is priced at \$26,580. DEC will introduce a color version of the workstation by July, said Bonnie Morvey, manager of Vaxstation product management.

The new machines essentially will replace the Microvax I and the Microvax I-

based workstations, DEC officials said. A field upgrade kit for the Microvax I, available now, costs \$9,700.

#### Compact optical disk system

Among new storage products, DEC rolled out a compact read-only optical disk system for the Microvax family that stores 600M bytes, costs \$2,195 and is expected to ship in July.

The company claimed that it will be the first major computer maker to offer an integrated system storing data on a single optical disk. DEC will handle disk mastering, with prices starting at about \$250 per disk in quantities of 50.

DEC also unveiled the 96M-byte Model TK50 streaming cartridge tape drive, priced at \$3,450, and the 71M-byte Model RDS3 hard disk drive, which will cost \$3,350.

DEC is located in Maynard, Mass. 01754.

## Dema conference set

WASHINGTON, D.C. — The Data Entry Management Association (Dema) will hold its Ninth Annual Data Entry Management Conference Sept. 9 to 11 at the Washington Sheraton Hotel here.

The conference theme is "The Year of Discovery," and topics include harnessing the personal computer explosion, maintaining data processing integrity, dealing with VDT health issues and motivating employees. Other topics include networking, service bureaus of the future, incentive systems, word processing and on-line and distributed processing.

The conference costs \$465 for Dema members and \$620 for nonmembers. A \$40 discount applies before June 15, and a special \$551 price is available for nonmembers who would like a one-year Dema membership. More information is available from Dema, P.O. Box 16711, Stamford, Conn. 06906.

More than 100 top corporations chose Comshare's System W decision support software in the last 18 months. Teamed with IBM mainframes, System W untangles the information management challenges that face business professionals. Especially the big payoff ones like performance reconciliations, problem analysis, forecasting and electronic management reporting.

and publishing firm, has evaluated System W, too. And it says that companies seeking a competitive edge in business planning and analysis should put System W to the test.

You should read the *Data Decisions* evaluation before your company makes a major investment in decision support software.

# Mass. Blue Cross' data entry systems span 20 years

By Thomas Robinson  
Our Staff

BOSTON — Blue Cross/Blue Shield of Massachusetts' data entry equipment spans more than 30 years and several layers of technology, but it is all geared to the same purpose: production.

"We want as automated a data capture as possible," said John Kolstad, product manager at Blue Cross/Blue Shield of Massachusetts. Blue Cross pays health care claims and collects money to pay claims, he said, referring to his company's job as that of an intermediary in the claims collection process.

The company has IBM 3083 Model B and 3081 Model G computers, as well as Honeywell, Inc. DPS 6 and DPS 8 mainframes, he said. A Nixdorf Computer Corp. Model 680 minicomputer and Honeywell's DPS 6 minicomputer with Honeywell's Data Entry Facility II screen builder are in a central location and form the basis for a shared processor system for claims and some actuarial data entry, Kolstad said.

For uncomplicated data capture applications, such as premium collections from large corporations, Blue Cross/Blue Shield instituted optical character recognition (OCR) back in the 1970s, a method that has worked on well for that purpose.

But when the company tried OCR for claims, it did not work at all, Kolstad said. The volume of data on even one claim is substantial, he said. Often, some data is handwritten while other data is typed on a variety of typewriter fonts, and all of this is too complex for the OCR technology, he said.

## Snapping tapes, disquettes

Blue Cross/Blue Shield's DP people got together with physicians and hospital staffs to work out an automated data entry system for claims. They decided to swap back and forth the tapes or disquettes on which the health care organizations load their claim data, Kolstad said.

"We'll either pay, suspend or reject [the claim], and we return the results on the same media [that] they sent us," he said. This method has increased efficiency, as it is new clear to the providers and to Blue Cross/Blue Shield who is responsible for errors in the tapes or disquettes, he said.

Large account subscribers send in their enrollment data that way now, too, Kolstad said. The management of the 300 tapes per week that result from this method is onerous for improvement, he added. The tapes must be carried, mounted and controlled, all of which is very time consuming.

Kolstad is in the process of connecting the Honeywell DPS 6 minicomputer to the IBM mainframes by using Honeywell Systems Network Architecture emulation packages, he said, in order to communicate the files directly into the system over communications lines using IBM's Synchronous Data Link Control between systems.

Kolstad's plan calls for replacing the Nixdorf minicomputer with another Honeywell DPS 6. He said he wants to do away with the central location of the minis and distribute all work to end-user locations.

Kolstad is also in the process of developing his CICS environment —

formerly a Vasm disk file system — into an IBM IMS data base system in

order to have more control over information through programming, he said. On the Honeywell mainframes, he uses a homegrown remote transaction entry system with Honeywell's IDB1 data base, he said.

The company still uses about 40 card-punch applications, a carryover from the 1950s and 1970s, Kolstad said. IBM's 026, its original keypunch machine; the replacement

IBM 129, a keypunch with about 80

characters of memory; and various early data entry systems from other vendors are still used for old master card files, but nobody actually punches the keys anymore, he said. Operators key in the 80-char. record data to disk, and then the data is switched to the key machines via a black box device, he added.

The old card systems are used mostly in the actuarial departments for specialized "what-if," routine-dependent reports based on master card files, Kolstad said. Users cannot control the

preparation of data as efficiently as they can with more modern equipment, as the company is planning to eliminate the cards and make major improvements to these applications, according to Kolstad.

The biggest problem for Blue Cross/Blue Shield's information systems group is keeping up with changing technology, Kolstad said. He said he visits other user sites, joins professional organizations such as the Data Processing Manager's Association and uses Atlantic Software, Inc.'s SDM/70 series of guides to design, develop and install data processing systems in the process of upgrading the company's data capture systems.

Kolstad

## Technology upgrades increase duties of data entry clerks

BOSTON — Data entry clerks are forced by the sophistication of today's interactive data capture systems to know more about their company's business than they had to know 10 years ago. To ensure clerks' productivity, programmers and managers must be aware of data capture efficiency factors.

In an on-line, interactive CRT-based data capture system, the person-to-machine interface has forced operator training to change dramatically in order to maintain sufficient levels of ability, said John Kolstad of Blue Cross/Blue Shield of Massachusetts. A by-product of this increased training and responsibility is job enrichment for the clerk, he added.

When a clerk completes the fields in a fully formatted CRT screen, he must be able to deal with errors that show down the process, Kolstad said. Clerks are not buying in a machine-like fashion anymore, he said.

Designers of the screen formats should realize that unnecessary data, awkward positioning of fields and slow detection of errors can retard the data capture process considerably, he said.

"You don't want buyers to be buying in awkward fashion," he said. The format should lead the operator from left to right, from top to bottom — the fundamental design of a screen format. If something is keyed incorrectly, it is important to catch

the error at that point instead of after more fields have been filled in, he added.

### System response time important

The system's response time is very important, Kolstad said. Studies show that if response time is slower than three seconds, the clerk's attention will be on something else, and productivity will decrease. Cryptic abbreviations on the screen format that are different from the title on a source form introduce a margin of error or lack of understanding; so the naming of data elements is crucial, he said.

The cursor is the operator's tool, Kolstad said. The ability to navigate

it easily through the screen is important.

Managers should be aware of the comfort of their data entry clerks, Kolstad said. System demands must be tailored to human beings, but the extent to which operators should be made comfortable is a management issue, he said. "There is a balance, but if you expect too much, the person can't deliver," he said.

Important considerations include the chair design, keyboard height, lighting and length of time spent in front of the system, he said. Managers should try to correlate these factors with productivity measurements to see what works for the clerks, he said.

— Susan Richmond

## Ausgraph '85 set for August

BRISBANE, Australia — The Australian Computer Graphics Association (ACGA) has announced that the Ausgraph '85 conference and exhibition will be held here August 12-16.

The third annual computer graphics and computer-aided design and manufacturing conference will cover animation and graphic arts, business graphics, exploration and mining, architecture and engineering, cartography and mapping, advertising, image processing, printing and publishing, video games and education.

Among the speakers are Carl MacShower of MacShower Associates and Stanley Klein, author of the "3-Klein Newsletter."

More information is available from Conference Secretariat, Ausgraph '85, P.O. Box 29, Parville, Victoria, 3063, Australia.

## Firm to release AI directory

SCOTTSDALE, Ariz. — A directory of more than 200 companies in the artificial intelligence industry will be published this summer by DM Data, Inc., an AI consulting firm based here.

The directory is expected to list firms involved in AI, expert systems, voice recognition systems, artificial vision, natural language, symbolic computing and AI programming languages.

The directory is said to include company names and addresses, contact names, product information, company sales figures by product category and a master telephone directory.

DM Data is located at Suite 100, 9500 E. Camelback Road, Scottsdale, Ariz. 85261.

## PROMISES JUST A LOT OF SMOKE?

Data General's CEO system gives you all the features for complete business automation.

When it comes to office automation, IBM and Wang would like to sell you the sizzle of future features. Features you need today. But ones they may not deliver for quite some time.

Data General's Comprehensive Electronic Office (CEO) lets you integrate your business applications with office automation functions and decision support tools such as spreadsheets, graphics and databases. So all levels of your business can work together more effectively.

We can also tie into almost every standard communication network to make your business more productive.

Our CEO system gives you all this, in addition to office automation essentials that are exceptionally easy to use.

While the rest of the world waits for IBM and Wang to supply each of these features, over 60,000 users have been sold on our CEO systems. And our

support plans make sure they're using it to their best advantage. In tomorrow's business battles, don't get burned by a smoke-screen of promises. Check out Data General for total business automation solutions. For more information, call 1-800-DATAGEN or in Canada 1-800-268-5454.

## Informatics nixes Sterling's takeover bid

### Reelects members to contested seats

By Kathleen Burton  
CW West Coast Bureau

**LOS ANGELES** — By a more than two-to-one margin, the management of Informatics General Corp. won a proxy battle with Sterling Software, Inc. at Informatics' recent annual meeting.

Informatics' shareholders spurned Sterling's cash buy-out offer by re-electing Informatics Chairman Walter Bauer and Director Clarence W. Spangle to their respective, challenged seats on Informatics' seven-

member board.

In a preliminary tally completed by Informatics' auditors last week, Bauer and Spangle won 2.26 million votes, compared with 860,000 votes for Sterling Chairman Sam Wyly and Chief Executive Officer Sterling Williams. The vote represented 70% of Informatics' outstanding five million shares.

Dallas-based Sterling, which first offered \$25 per share and later upped the offer to \$36 per share, was seeking the election of its own proxy takeover directors and the defeat of antitakeover provisions.

Informatics' antitakeover fair price amendment and a "green mail" proposal designed to prevent a stock

acquisition by Sterling were both defeated. According to Informatics, both proposals required that a majority of the company's outstanding stock held on March 15 be voted.

But since recent heavy trading on Wall Street caused 70% of the company's stock to change hands since that time, new shareholders were ineligible to vote, according to an Informatics' spokesman.

The firm initially had no intention of being acquired, Bauer said, but the heavy trading during the last month "indicates that our shareholders want a merger, which Informatics' board will now aggressively pursue."

# Micros play key role in detecting E. F. Hutton scam

By Dennis McKinney  
CW Staff

HARRISBURG, Pa. — When the U.S. Postal Inspection Service here began investigating incidents of suspicious mail and wire fraud at E. F. Hutton & Co. three years ago, Inspector John Holland was not quite sure how to approach it. Not long after, however, the novice computer user found himself supervising a micro-based document inventory system and spreadsheet program that produced crucial evidence against E. F. Hutton in a multimillion dollar cash transfer scheme.

Earlier this month, the brokerage admitted it was guilty of conducting a check-kiting operation that allowed it to receive interest on uncollected funds. Through the use of a customized document control software program, two IBM Personal Computers and two IBM Personal-Computer XT's working in a stand-alone environment, the Harrisburg postal inspectors were able to recreate the pattern by which E. F. Hutton reportedly transferred its deposits throughout the country, Holland said.

The Harrisburg postal inspectors were called into the case because uncollected E. F. Hutton checks were being transferred from a Wilkes-Barre, Pa. bank. The inspectors first created a data base from information contained in more than five million subpoenaed records from E. F. Hutton and approximately 600 bank accounts through which the checks were passed, he said. The checks were inventoried by account and by month.

Using a document control software program based on a U.S. De-

partment of Justice model and developed by a Washington D.C.-based postal inspector, the Harrisburg office established a system, preparing a list of the documents that could be used as exhibits in a trial. The program automatically assigned a sequential document code and control number to each piece of evidence, Holland said. E. F. Hutton, however, filed its guilty plea before any trial proceedings began.

## Lotus 1-2-3 used

Lotus Development Corp.'s 1-2-3 spreadsheet package was used by the inspection service to trace E. F. Hutton's deposit patterns, according to Holland. That application allowed

the investigators to examine E. F. Hutton's customer receipts, funds drawn from its accounts and funds transferred between E. F. Hutton's offices throughout the country on any given day, he said. The called information was displayed in bar charts, line graphs and pie charts. Ashton-Tate's Dbase data base management package was used for inventory control, he said.

Less than a month after it implemented this application, E. F. Hutton's pattern became clear, Holland said. The investment firm reportedly was overdrawing its deposit accounts and covering those deposits with checks from other E. F. Hutton accounts. E. F. Hutton would allegedly

create additional fraud by delaying the check-clearing process. Normally, funds are transferred from branch banks to regional banks to money center banks.

However, the Postal Service discovered E. F. Hutton often modified that process, transferring funds among several branches or regional banks before going to the money center banks.

"After the first month, we could see a pattern. You could see exactly what money came in from customers, what money came in from other sources, and [what was] the company's book value," Holland said. "We had to rely on the computer to actually understand what was going on."

## COAX DOUBLER

Double the capacity of an existing coax cable in just minutes. Add a second IBM 3270 terminal or printer where one already exists. This module per allows simultaneous data transmission of both peripherals over a single coaxial cable.

## CXTP MODULE

Wherever phone lines exist, you can easily install an IBM peripheral. Simply attach a terminal or printer to a remote CXTP module and transmit long over limited pay phone. Installing a CXTP module at the correct site.

## BUST THROUGH COAX EXPENSE

Now dramatically reduce costly coax cable requirements with compact, easy-to-install modules that require no internal electrical power. Fibronics offers the DOUBLER, the CXTP MODULE (coax-to-twisted pair) and the DVM MULTIPLEXER (voice and video). All three modules are COMPATIBLE WITH ANY IBM® 3270 CATEGORY A DEVICE (or plug compatible).

## DVM MULTIPLEXER

Transmit simultaneous voice and data over existing telephone lines! Pair wire with the quick installation of the DVM MULTIPLEXER. Add a terminal or printer wherever a phone exists without cost expense. \*For all distance requirements and prices call Fibronics.

## VOTE from page 12

committee within Informatics that is seeking possible buyers for the company, said Informatics is considering a transaction with unnamed parties that could lead to a leveraged buy-out. The negotiations would probably include members of the company's management and would result in taking the company private, he said. Informatics is holding discussions with several outside parties, but no firm offers have been made, McGurk said.

According to Bauer, Informatics' value was the central issue of the decision to reject the Sterling offer. "We're worth much more than the Sterling offer," Bauer claimed. However, he declined to name a figure that the company would accept.

Wyly disagreed with Bauer's valuation of the company. "If you base Informatics' value on projections, its profits were down 90% during the first quarter, and there's no robust upturn expected for the second quarter, either," Wyly said. He said his offer was "very aggressive" and predicted that "there will be no other bidders at our level. If Informatics can get a better offer than ours, they should take it." But he did not rule out the possibility of a higher offer from Sterling in the future.

Wyly denied that a due diligence contingency in Sterling's bid was designed as an escape clause. The contingency states that Sterling's offer depended on the examination of Informatics' books and records by auditors.

# Firms see need for integrated systems, but few buy

## Survey: Installations trail perceived needs

By Charles Behrman  
Of New York Times

**NEW YORK** — The vast majority of Fortune 500-type companies know which integrated office systems are needed to provide business-oriented management information. But only a small fraction of them — about 6% — have such systems in place.

That was one of the key findings in a recent survey conducted by Arthur D. Little, Inc. (ADL), a Cambridge, Mass., management consulting firm. Leon Jackson, a senior

consultant with ADL, said the perception of the need to bring more sophisticated systems to bear on information resources is widespread, but installation of such systems lags far behind. He cited the survey results in a talk at the Associated Information Managers' annual conference here last week.

"In theory, companies in the U.S. are moving toward the concept of chief information officer and information resource management. In fact, there is a tremendous implementation problem out there," he said. The January survey interviewed employees within corporations responsible for systems integration; it covered 108 bellwether client compa-

nies of ADL, he said.

The need for integrated systems was not recognized in all cases. Three percent of the respondents said word processing represented the degree of office information systems they needed. Another 4% said word processing plus such additions as graphics or spreadsheet analysis represented their level of need.

Another 17% cited electronic mail and office applications programs as adequate. But 76% said integrated systems would be the word processors, terminals and personal computers together into local-area networks and allow the firms to communicate with departmental computers and corporate mainframes.

Of this group, "Five percent think they have integrated information systems now, and they're being optimistic," said Jackson.

When asked if they had a plan to integrate office information systems, 21% said they did and 58% said they were drawing one up. Twenty companies, or 18% of the respondents, acknowledged they had no plan. Of these, eight firms said they had no intention of trying to get one, Jackson said. The eight represented holding companies with small corporate staffs overseeing scattered divisions, he added.

### Obstacles to integration

An obstacle to effective information resource management is that integration requires a joint effort by separate and often competing departments, Jackson continued. When asked if DPs, telecommunications and office systems directors report to the same executive, 78% said they did and 22% said they did not.

Of those who said they did, 67% reported to an MIS vice-president or executive, which, according to Jackson, is an indication that "the MIS director is still very strong in this area."

Fifteen percent reported to a chief information officer; 9% reported to a chief operations officer; 6% reported to the chief financial officer; and 5% reported to an administrative staff member. The remaining 9% reported to "other" executives.

When Jackson worked as a consultant to FMC Corp., a defense, machinery and chemicals company in Chicago, the MIS director reported to the chairman and the telecommunications director reported to the chief financial officer. The two executives had to talk to each other to figure out what their respective departments were doing, Jackson said. It was never suitably explained to him why the organizational structure worked that way, but he surmised that the chairman "had a bond of loyalty to the [chief financial officer] and was reluctant to take part of his responsibility away from him," Jackson said. FMC eventually reorganized to have the MIS and telecommunications directors report to the same executive. "The idea of information resource management is catching on," he said, "but we still have a long way to go."

A second speaker, Barbara M. Rodriguez, national coordinator of office systems for Arthur Young & Co., said the accounting firm is trying to interconnect the minicomputers and microcomputers in its 90 regional offices. It also wants them to have access to mainframes at its New York headquarters.

"It is not the technologist who is driving [office integration]. It is the business person" seeking to provide better services to his customers, she said.

Until recently Arthur Young spent \$3 to \$9 million annually on technology without any plan for integrating it into the organization, she said.

Even with a plan, she said, an extensive "marketing" effort is needed within the organization to win acceptance for it, and usually "a change agent" is selected at each office "to sing the praises of what we're doing," she said.

# AT&T streamlines DP section in postbreakup consolidation

By Paul Kinslow  
Circuit

While divestiture left data processing departments at the former Bell operating companies relatively unchanged, the same cannot be said for DP shops at the former parent, AT&T. Since divestiture, AT&T DP staffs have shrunk by approximately 6% as the communications company has consolidated DP departments and functions.

"We are attempting to develop an architecture that will be consistent throughout the organization," noted Joseph Laferrera, system engineering vice-president in the Information and Telecommunication Systems division at AT&T Technology, the company's unregulated sector.

A key to that structure is the integration of functions that were previously duplicated by various departments DP functions for the communications company's regulated entity, AT&T Communications, which includes the former Long Lines division, were combined with those of the General Department, AT&T's central operation.

"We had to blend two operating structures into one, taking the best each had to offer," said Dwayne Lase, director of the finance department in the systems development and processing division at AT&T Communications.

## Systems integrated, cuts made

"As systems were integrated, cuts were made. When we integrated systems, we attempted to consolidate functions so fewer people would be needed to run them," Lase remarked.

Divestiture created other opportunities for consolidation by forcing AT&T to redesign many existing systems. "We had to add some 45,000 telephone operators to our payroll system," Lase said. "Before divestiture, the operators were paid by the operating companies. The design of these systems was difficult because we added features and tried to cut staff."

Cuts in DP personnel were principally made in operations areas. When operations staffs were cut, staff members were transferred to other areas of the company, Lase said. "There were a number of departments that needed people with computer experience," he said.

Thus far, programmers have been spared from the cuts because the need for their services has increased. Laferrera listed two reasons for the increased need: technical advances and divestiture.

"There are office automation applications today that were not possible a few years ago," he noted. "We want to supply our workers with the latest equipment."

Laferrera listed a number of applications that were spawned by the breakup:

■ Customer billing, which had been handled by the former operating companies.

■ Supplying billing data to independent suppliers as well as to the former operating companies.

■ A consumer product division that was formed to sell AT&T equipment at J.C. Penney Co. and Sears, Roebuck & Co. Some of these functions were so complex that new departments were created. "A 300-person department was formed to supply billing and payroll information for one application," Laferrera stated.

Despite the new applications, Laferrera noted that AT&T planned further consolidation. "We are constantly evaluating our applications to determine if there are any cost-cutting measures [we can implement]," Laferrera said.

## 'Legality forbidden to complete'

"There are a number of items that we are legally forbidden to complete. [For example, the regulated and unregulated arms of AT&T are unable to consolidate DP functions.] As these restrictions are lifted, we will consolidate other areas," he said.

The communications company has tried to ease the consolidation process. "Before we integrated [AT&T Communications] and [the] General Department, we undertook a two-year study," Lase stated. "Management and entry-level employees were transferred between departments. Changes were carefully planned. The integration process is almost completed. There are only a few small pockets that have to be incorporated."

"To judge how well the integration was handled, we monitored our turnover rate. It remained at a rate attributable to normal attrition. There hasn't been a significant increase since divestiture."

## DIVESTED from page 1

vice-president estimated that there were 1,000 Nynex data processing employees in New England.

Ironically, managers cited companywide layoffs as a principal reason for DP staff increases. "When other departments were forced to cut their staffs, they [still] needed a means to complete their work," Gallagher noted. "For many departments, the best method was through automation."

These applications required additional data processing workers. "When Nynex offered an early retirement option, we did not allow data processing people to take it," Gallagher maintained. "We just couldn't afford to let our people leave."

Cuts in other departments' budgets, coupled with increases in DP staffs, created some predicaments. "With other departments cutting staff, we really had to justify increases in our budget, for it was carefully scrutinized," Gallagher said.

Additionally, divestiture created more new applications than the number of old ones it eliminated at some of the former operating companies. "For example, we no longer run applications for customer installation services; that is solely an AT&T function," Gallagher said. "But we supply billing and customer information to a number of carrier services like [MCI Communications Corp.]"

"Some applications, originally designed to supply AT&T with financial information, have changed slightly. "We supplied AT&T with financial data that it would consolidate for various financial reports," Illinois Bell's Munster said. "Now, rather than feeding the data to AT&T, we send it to Ameritech."

Although the data processing departments have thus far been largely unaffected by divestiture, managers agreed that significant changes could be made in the next few years, as the seven regional operating companies function increasingly as separate units. This shift will cause them to consolidate some functions, including data processing functions, managers said.

"We have not merged our New York and New England data processing departments per se, but we are attempting to integrate some functions," Gallagher noted. "For example, when a new payroll system is required, either the New England or the New York branch will design and maintain it rather than designing two separate systems." Gallagher discussed the possibility of a complete merger of Nynex's New England and New York data processing departments.

The merger route is a possibility at Ameritech, where the company has undertaken a study to determine which DP functions can be united.

WESTWOOD  
COMPUTER CORPORATION

WASHINGTON  
UPDATE  
On Washington Business

### Tymnet wins bid for government net

WASHINGTON, D.C. — The U.S. Department of the Interior last week awarded a \$20.6 million contract to Tymnet, Inc. of Vienna, Va.,

for a packet-switching data communications network for the department's offices and bureaus.

The nationwide service eventually will replace parts of "the myriad of fragmented communications services" now used by the department, according to Interior Under Secretary Ann McLaughlin. McLaughlin said the department expects substantial savings in data-communications costs. She said the U.S. Geological Survey alone

is expected to reduce data transmission costs by 30%, for a savings of \$270,000 per year.

### Senators introduce computer amendment

WASHINGTON, D.C. — Four U.S. senators recently introduced legislation that would revise the Computer Fraud and Abuse Act of 1984 to protect from criminal prosecution federal employees who disclose government information.

The bill, S. 610, was introduced by U.S. senators Charles McC. Mathias Jr. (R-Md.), Patrick J. Leahy (D-Vt.), Edward M. Kennedy (D-Mass.) and William S. Cohen (R-Maine).

The 1984 law makes it a crime to disseminate information stored in a U.S. government computer if the defendant gains access to the computer without authorization. The bill limits the scope of the law to prohibit disclosure of only "personally identifiable information" covered by the Privacy Act of 1974.

Mathias and Leahy said the 1984 law's broad language could require prosecution of "whistleblowers" who disclose information about federal fraud and abuse. In addition, they said, the law could discourage federal employees from releasing information under the Freedom of Information Act for fear of prosecution.

### Pentagon attempting to cut systems costs

WASHINGTON, D.C. — Pentagon officials, responding to criticism from the U.S. Congress about Pentagon computer procurement and management practices, recently testified that they are on the right track toward reforming those practices.

John P. Springer, director of information resources management systems at the U.S. Department of Defense, told the U.S. House Appropriations Committee's Subcommittee on Defense of the following practices:

■ The department increasingly is purchasing its computers outright, rather than leasing them. For leases already in existence, the military is buying out the leases when that is cost-effective.

■ The department is placing greater emphasis on acquiring computers through open competition rather than relying on General Services Administration list prices, which tend to be higher than competitive contracts.

■ The Pentagon has begun to create an inventory of its computers and has logged nearly 28,000 units, with 5,400 of them valued at more than \$50,000.

## Information Processing Professionals

## When you pass on what you know, everyone wins.

It's time to make your move to the front with a fast moving company. Electronic Data Systems (EDS) Corporation has grown to be the dominant company in the information processing field. It employs more than 20,000 people, generates over \$900 million in annual revenue, and has an annual growth rate of 20% per year. Daily transactions exceed eight million from more than 35,000 on-line terminals, and the company has created the nation's third largest communications network. In this environment of rapid growth, your opportunities for career advancement are virtually unlimited.

EDS is now looking for outstanding professionals to train recent college graduates through our dynamic Systems Engineering Development (SED) Program.

SED—a vital investment in our future.

The SED Program, nationally recognized as the model for the industry, is designed to turn out the best Systems Engineers. As EDS, a Systems Engineer is a computer programmer, programmer analyst, and systems analyst all in one—capable of solving complex business problems through computer applications. Obviously, this dynamic program requires instructors above the norm—in both ability and motivation.

Your career with EDS

These positions are highly visible and offer an excellent introduction into management. Our instructors are offered the opportunity to supervise 20 employees, make performance evaluations, and provide career

counseling. At the end of a typical 18-month to two-year assignment, instructors are given the opportunity to remain in the educational department, or to choose another career path within EDS according to their interests and capabilities.

Can you qualify?

The professionals we seek must have 3-5 years work experience and have a keen interest in both the technical and business aspects of information processing. Candidates must also have excellent comprehension of CUBOL or ALG and recent IBM mainframe experience. Background in COBOL, VSAM or in a data base environment is a plus. Although no previous teaching experience is required, you must have a professional image and be able to present your thoughts clearly in an organized manner. U.S. Citizenship is required.

If you qualify, we would like to talk with you. Please send us your resume or call now. Your career time is too valuable to waste.

Call us collect Monday-Friday from 9:00am-5:00pm (Central Time) at (214) 490-2904. Or send your resume to:

Richard Burges  
Electronic Data Systems Corporation  
Corporate Headquarters Recruiting  
1200 Park Central Drive  
Suite 200A, Dept. ICW1405  
Dallas, TX 75251

Bring your mind to EDS.

Electronic Data Systems Corporation

An Equal Opportunity Employer M/F

# Freeing business from computer languages first began with Computer Corporation of America.

## But keep it quiet. We did.

We're making it easier for management and computers to talk direct. Quietly and easily.

After all, our founders over 20 years ago were a computer scientist and a psychologist. So our focus literally began with creating software that let people more easily communicate with computers.

And our first contribution was the earliest example of fourth generation language.

One of the latest, is the Intelligent Information Center. And with it, your business executives can use their personal computers to access and use the firm's mainframe computer data direct.

To speak in slightly technical terms, the IIC is a language free, decision support query and report writing system that's menu driven and syntax free. In fact, it's just about keyboard free.

Your executives can write their own reports or use mainframe data on their favorite spreadsheet in the office or at home.

The Intelligent Information Center is already proven in industry use, to be a very powerful, very flexible link between mainframes and people. The non-computer-expert type of people.

Just like our founders would have wanted.

We'd like to tell you more about our advanced technology, from our very powerful MODEL 204 database software, to our other application development tools for business.

Write John Donnelly, VP Marketing, Computer Corporation of America, Four Cambridge Center, Cambridge, MA 02142. Or call 1-800-258-4100.

## Computer Corporation of America

TF A Cromtek Company

# IDEA IS SHIPPING A 5250 TWINAX EMULATOR WITH A UNIQUE FEATURE. IT WORKS.

Last Fall, two major companies announced a twinax board for PC-to-IBM System 34/36/38 communications. Today, only one company is shipping a product that's fully functional: IDEA.

Unlike our competition, the IDEAcComm 5251 twinax board comes complete with software. This may explain why the thousands of units shipped since December are making IDEAcComm 5251 the industry standard worldwide.

You'll also find many third-party software packages for the System 3X supporting our board: Decisionlink™ and Intelink™, for example.

But our customers have found lots of other reasons to choose

#### IDEAcComm 5251.

We provide a "hot key" capability, hard disk access, printer support, four concurrent host sessions, and data transfer. Plus, our customers who benchmark IDEAcComm 5251 tell us that it's incredibly fast.

And IDEAcComm 5251 does all this and still requires only 30K of memory on your PC.

So if you want a 5250 twinax emulator with performance rather than a promise, call IDEA at 800-257-5027.

# Courts wary of using computer printouts as evidence

By William Steinhilber  
OF Washington Bureau

Legal specialists are warning U.S. judges that computer printouts are not automatically admissible as evidence in state and federal courts.

Because many judges distrust computer-generated records, the DF manager may be required to testify about the procedures used to create and ensure the integrity of the business records, according to several lawyers interviewed recently.

"It's not a foregone conclusion that a judge is automatically going to accept your computer-generated records," noted Michael D. Smith, an attorney in Manhattan Beach, Calif. The problem, he said, results from vague state laws and federal and state judges who view computer records as unreliable.

## Potential inadmissibility

In several cases — one as recent as 1980 — Illinois judges ruled computer printouts inadmissible because business failed to provide detailed testimony about how the computer hardware and software works when preparing the record, according to a report in the *John Marshall Law Review* (Vol. 18, No. 1), published by the John Marshall Law School in Chicago.

In essence, the law considers all documents inadmissible unless they qualify for an exception to the hearsay rule, such as the exception for business records that are contemporaneous and trustworthy, attorneys said.

But they said it is sometimes difficult for computer-generated records to satisfy these standards. For example, it is hard to tell exactly when a business record was stored in the computer — judges are very skeptical of data entered just before trial — and it is difficult to prove the printout is not a product of self-serving selective retrieval.

As a federal district judge in New Jersey put it, "The computer is a marvelous device that can perform countless tasks at high speed and low cost, but it must be used with care. This is because it can also make errors at high speed." (The judge was skeptical of Internal Revenue Service computer records in the 1975 case of *Neal v. U.S.A.*)

## More credibility

But courts increasingly are accepting computer printouts as they recognize that companies rely on their DF operations and have a strong business incentive to maintain data integrity, the legal sources said. Furthermore, one source said the emerging technology of unerasable optical storage may provide more credibility.

Robert F. Williams, president of Chicago-based Cohesent Associates, Inc., a consulting firm that specializes in records management, said that because records cannot be removed from unerasable optical storage systems, records stored on such systems should be more acceptable in court than records kept in magnetic storage. In a presentation at the recent conference of the Association for Information and Image Management in Washington, D.C., however, Williams noted that this assertion has not yet been tested in court.

**'The bottom line is to run a business-like DF operation, with logs that document the entries and procedures.'**

— Daniel T. Brooks  
Washington, D.C., attorney

Computer law specialists strongly urged firms engaged in litigation to prepare testimony supporting the accuracy of their computer-generated evidence. "Be prepared to have somebody challenge the authenticity and accuracy of a computer-generated record and get someone in DF who can

document the file maintenance and security procedures who will testify," recommended Daniel T. Brooks, a Washington, D.C., attorney.

"The bottom line," Brooks concluded, "is to run a business-like DF operation, with logs that document

the entries and procedures."

Peter M. Steinhilber, author of the *John Marshall Law Review* report, argued that detailed testimony about the computer system would be unnecessary if courts stopped discriminating between written and computer records and adopted a "presumption of reliability" for computer printouts.

"Relying on extensive and technical foundations [of detailed testimony] as a prerequisite to admissibility only perpetuates the judicial myth that electronic record systems are inherently less trustworthy than conventional ones. It increases the complexity of trials and... unduly burdens the proponent of a computer record," he wrote.

# Seeing is believing.

**Introducing VU-TEK.  
No other glare screen does more to increase productivity.**

## A glaring problem VDT operators face.

More than 90% of all employees who regularly use VDTs may suffer from eyestrain. And that can make your business suffer, too.

The causes of eyestrain? Glare. Reflection from office lights. And hard to read characters.

The result. Impaired vision. Headaches. Fatigue. More work breaks and absenteeism. And reduced office productivity.

## VU-TEK™ reduces glare up to 99%.

VU-TEK contrast enhancement filters help increase operator productivity by eliminating up to 99% of reflected VDT glare while also improving character clarity. VDT operators can now work more efficiently and comfortably.

VU-TEK's dramatic effectiveness is due to an advanced circular polarizer that traps glare preventing it from reaching the VDT operator's eyes.

No other glare screen is more effective than VU-TEK.

## VU-TEK increases character legibility.

VU-TEK uses a special distortion-free anti-reflective coating on the front glass surface to improve character contrast and clarity.

The result... bright, clear, easy to read VDTs.

## Fits leading VDTs. Easy to install.

VU-TEK fits more than 600 different VDT types. Custom sizes are also available.

VU-TEK is lightweight, durable and attaches in seconds.

## "See for yourself" free trial.

End the glaring problem with computer automation — with VU-TEK.

To order your VU-TEK or arrange a 30 day free trial, call collect 1-805-987-5026. Or mail the attached coupon for more information.

VU-TEK is the result of research by American Hoechst, a member of the Hoechst Group of companies, with worldwide sales of \$14.5 billion, and annual research expenditures of over \$530 million.

Patented technology for  
Contrast Enhancement  
Filters, VU-TEK.

# "VAX IS GIVING AMF MORE TIME FOR THE THINGS THAT REALLY MATTER."

Michael Lilly  
Director, Corporate MIS Operations  
AMF, Incorporated

To many people AMF means recreational sports. But today it also means electronic components, filtration equipment, automated process equipment and more.

It's a vastly more complex company. A company made

vastly more manageable by Digital's VAX™ computers – the vital component of office automation at AMF Corporate/MIS Operations.

As Michael Lilly says, the company's decision to stake its future in MIS on Digital's VAX computers – and the office automation tools like AI-In-1™, DECnet™ and DECmail™ software that run on them – was hardly a snap judgment.

Every major computer company was considered, Lilly says: that, "dollar for dollar," only Digital's VAX system offered the power, ease of use and communications capability with other computer systems – including IBM – that AMF needed.

So AMF chose the VAX com-

puter – the best-selling 32-bit computer in the world – and waited to see what the machine could do.

**"SUDDENLY  
WE HAVE TOOLS AND  
CAPABILITIES WE  
NEVER HAD BEFORE."**

Lilly and his group didn't have to wait long. The system was up and running within days.

Reaction within the department was rapid and gratifying. "We really got excited about it," says Lilly. "Immediately, we were communicating better." And there was more – spreadsheets and word processing and a mail system. "Suddenly," Lilly said, "we had a vehicle for total open communications to every impor-

tant person or department in the corporation."

Part of the story behind AMF's almost instantaneous rapport with the VAX system is that it's so easy to use. Menus and operating commands are the same for each fully integrated application. Whole functions are completed in as few as two keystrokes. And because everything is in plain English, it's literally as simple as A-B-C to incorporate

any VMS™ application into the daily work routine.

**"INSTEAD OF SIX WEEKS TO DEVELOP AN APPLICATION, IT TAKES TWO."**

VMS software development tools have so improved the way things are done in his department, Lilly says, that he projects the savings in applications development time and costs alone at some 70 percent.

"Many of our new applications here at AMF will be written on that machine. I can't quantify it exactly. All I know is that I'm getting a heck of a lot more bang for my buck."

The first tests of VAX equipment proved so successful, that AMF quickly enlarged the system, adding terminals and DECmate™ and Rainbow™ personal computers. New departments went on line, for example finance.

"And that," says Lilly, "really created an explosion." Now AMF is implementing programs like general ledger systems, stock options and inventory sys-

tems, and keeping more efficient and flexible records, from accounts payable to personnel.

Adds Lilly, "People here are screaming to be on the VAX system, and there's got to be a reason for that. And I tend to think that it's return on invest-

ment to the forefront.

"It's put corporate MIS on the map," he says. "It has effectively increased productivity and efficiency. People are beginning to believe we can do the things we say we are going to do."

And what VAX technology

ment, making lists, discounted cash flows, spreadsheets they couldn't even begin to do before, versatility, tremendous graphics potential. It's just a whole world of opportunity that is elevating AMF to the forefront."

**"ANYONE WHO WANTS TO GET A COMPETITIVE EDGE."**

Lilly feels the VAX system has already elevated his own

is doing for his group, Lilly believes, it can do for all of AMF, or indeed for any company. "Any corporation that employs this technology," he says, "is going to get the competitive edge."

"This technology will explode. Because there are a thousand reasons to have it. But what it really all boils down to is this: everybody will want a VAX system because they can do the job better, faster and more efficiently."

"And that's what really matters."

**BEST ENGINEERS MEANS ENGINEERED TO A PLAN.**

VAX office automation computer systems, like all Digital hardware and software products, are engineered to conform to an overall computing strategy. This means our systems are engineered to work together easily and expand inexpensively. Only Digital provides you with a single, integrated computing strategy direct from desktop to data center.

## OUR WINDOWS OPEN A LOT OF DOORS.

Introducing the 5425 terminal from AT&T Teletype Corporation. It's the most highly featured ANSI 3.64-based terminal we've ever built.

Start with the 5425's windowing capability. Then add the fact that it's a general purpose editing terminal that's compatible with many computers such as VAX<sup>®</sup> and AT&T's new 3B series, and you'll see why it's such an outstanding value.

The nicest thing about the windowing feature is that it lets the operator take better advantage of multi-tasking capabilities of operating systems such as UNIX<sup>®</sup> System V.

As if that's not enough, the operator can do full-screen windowing without changing a program to fit the screen. At the same time, two more windows, which can overlap and vary in length and width, can be opened. The screen also can be divided into four independent windows which act as viewports into the terminal's 9600 character memory.

With 38 downloadable function keys and 16 screen labels, the 5425, which is also VT102<sup>®</sup> compatible, opens new levels for productivity. And the optional integrated intelligent modem features five programmable autodial keys to speed the dialing and logon functions. The modem also permits remote transmission from a standard phone jack.

If you want to open new doors in your career, look into our 5425. It'll make you look good. For more information, write AT&T Teletype Corporation, 5555 Ruby Ave., Dept. 3223-F, Skokie, IL 60077. Or call 1 800 323-1229, ext. 801. UNIX is a trademark of Bell Telephone Laboratories, Inc. VT102 and VAX are trademarks of Digital Equipment Corporation.

# OCC orders service firm to cease 'unsafe' practices

By William Datta  
Of Washington Bureau

WASHINGTON, D.C. — In an unusual move, the Office of the Comptroller of the Currency (OCC) recently issued an enforcement order against a firm that provides DP services to national banks and others. The agency ordered the unidentified firm to cease the "unsafe and unsound practices" identified by bank examiners.

The OCC did not name the subject of its enforcement order or specify the unsound practices, a spokesman said, though it is evident from the order that the firm had financial problems that could have disrupted service to banks.

The company agreed to the enforcement order, the agency said.

The OCC, a unit of the U.S. Department of the Treasury that regulates national banks, usually issues enforcement orders against banks with unsound practices but rarely against companies that are not banks, the spokesman said. OCC officials asserted that the agency has the authority to regulate and supervise companies that provide DP services to national banks under the Bank Service Corporation Act.

The action "underscores the OCC's belief that [DP] plays an integral part in the safe and sound operations of financial institutions," the statement said.

The OCC's order requires the data

processing company to do the following:

• Provide timely, edited financial information to the OCC; make financial information available to banks serviced by the company; and implement a contingency plan for disruptions of service.

• Establish internal controls and conduct regular audits to ensure the quality of financial data provided to national banks and their customers.

• Provide adequate liquidity in advance when operating losses are identified.

The OCC warned that it will continue to review carefully the companies that handle bank records and transactions and also expects banks

themselves to take appropriate precautions.

The OCC encourages banks to evaluate outside servicers at least annually," the statement said. "When a servicer's condition is found to be unsafe or unsound, the OCC expects banks to seek other sources for the services," it concluded.

In 1981 the comptroller's office advised banks to review the financial condition of their servicers, and in 1983 the office advised banks to evaluate annually the contingency plans of outside servicers.

This January, the OCC published a notice reinforcing its recommendation that banks be informed of the financial condition of DP servicers.

Reaction to the comptroller's enforcement action from a major DP service firm was favorable. Michael Nugent, government affairs counsel here for General Motors Corp.'s subsidiary, Electronic Data Systems Corp., said the comptroller's policy is "reflective of the critical role that [DP] plays in the banking industry — it's the Achilles' heel."

Nugent said the policy "puts service firms on notice that they've got to keep their financial health in order" and thus may enhance the industry's credibility. The regulatory activity does not threaten the industry, unless it expands into managing the business affairs of DP service providers, he said.

## Sterling Software produces the best DASD Management System in the world

### ... and we can prove it.

## Telecom meet to address array of topics

NEW YORK — Communications Week '85, a conference on the state of the voice/data communications industry, will be held June 17-21 at McGraw-Hill, Inc. world headquarters here.

The keynote address and a day-long series of reports from the communications industry by executives, journalists and consultants will be given Wednesday, June 19.

The keynote speaker will be Marty Cernese, president of the Association of Data Communications and director of operations for Aeronautical Radio, Inc. The topic of Cernese's speech will be "The User Focus in Communications."

Monday and Tuesday, June 17 and 18, will feature seminars in data communications, micro communications and compatibility, telecommunications and computer communications security.

Thursday and Friday, June 20 and 21, will be devoted to technology workshops on a range of topics including micro-mainframe links, fiber optics, protocol conversion, micros and local-area networks, intranet private networks and network control centers.

The cost of the conference ranges from \$195 for Wednesday only to \$1,195 for the entire week.

More information is available from Datapro Research Corp., 1806 Underwood Blvd., Teaneck, N.J., 08075

DMSOS™ the DASD Management System from Sterling Software Marketing, has consistently been rated highest for overall user satisfaction in leading independent surveys. DMSOS users—worldwide—trust our product to manage approximately 489,935 volumes of data a day.

15,309,000,000 bytes of data daily...

That's a lot of user confidence, and here is why.

DMSOS — The First \$25 Million Seller

in DASD Management

In 1984, DMSOS became the first system software package for data management to top a total \$25 million in sales.

1,000 users give their reasons for choosing DMSOS

- Easy to install — Easy to use
- Keep more data on-line, using less space
- On-line reporting for fast decisions
- Dramatically reduces backup and recovery time
- Supports all standard data set organizations
- Fast data accessibility, regardless of medium
- Adaptability to new hardware/software systems
- Automates migration to 3380's
- Reduces personnel costs

We Listen To Our Users

When DMSOS users tell us about their data management needs, we listen — and respond with recommendations that fit those requirements. When you call for technical assistance, implementation advice — or any questions at all — you are talking to a key member of the DMSOS development team.

No matter what hardware or software changes occur in your operating environment, DMSOS keeps pace... continuing to evolve... always state of the art.

Let Us Prove It To You...

With a FREE 30-Day Evaluation Sterling Software Marketing offers a free DMSOS evaluation. We'll show you why we are the proven leader... You have nothing to lose, and everything to gain in DASD space.

For your FREE DMSOS evaluation call today 800-824-8512. In California, Alaska, Hawaii, and Canada call collect 916-635-5535.

## Former Bell operating firms get OK to upgrade Centrex

By Bryan Wilkins  
OF Washington Bureau

WASHINGTON, D.C. — The Federal Communications Commission refused to kill the efforts of former Bell operating companies to revive their flagship business service — Centrex — with upgrades such as call routing, call forwarding, speed dialing, customer-originated changes and other features sought by the telephone interconnect industry.

Opponents charged that the upgrades to Centrex, a service in which the local telephone company switch provides private branch exchange (PBX)-type functions on a dedicated basis for customers, were not part of basic regulated telephone service but were computerized enhancements and, therefore, should be offered through an unregulated subsidiary, according to the Second Computer Inquiry policy.

However, the FCC did find that one proposed feature, customer-dialed account recording, otherwise known as station-message detailed recording, could not be offered as a part of regulated and tariffed Centrex. The FCC said that station-message detailed recording would make use of customer-generated station account information and store it in a Centrex computer.

### Keeping broad-and-better business customers

In the last two years, the seven regional holding companies have moved aggressively to improve Centrex to keep their broad-and-better business customers who were looking for features being offered in PBX systems.

The FCC noted that customer-originated station changes, for example, may appear to be an enhanced service because interaction with stored information takes place. "The test for determining

whether such services may be provided as tariffed adjuncts to basic service was set out in Computer Decision B. Such features may be tariffed if they facilitate use of traditional telephone service without changing the nature of traditional telephone service," the FCC said.

The North American Telecommunications Association petitioned the FCC to overturn the Centrex upgrades and said it was disappointed by the FCC decision, which "provides additional, significant opportunities for the [divested Bell operating companies] to shift costs illegally from monopoly to competitive services."

The FCC's Common Carrier Bureau announced that it was preparing a rule to redefine exactly what criteria constitute "enhanced services." The bureau said that the enhanced services rule should be ready for release by the end of May or the beginning of June.

## THE MOST VALUABLE EQUIPMENT WE OFFER IS FREE.

Getting the right data processing equipment shouldn't be costly. And USL Data Systems is equipped with applications experts who make sure of that. Absolutely free.

When you rent, lease or purchase, there is no risk of getting the wrong equipment.

Our applications experts make sure you get the system that's exactly right for you. And we don't just provide a

limited number of products. We have all the leading brands in stock for immediate delivery. Hardware and Software.

And because you're renting or leasing from USL Data Systems, there's no risk of your system becoming obsolete.

No risk of over expending your capital. We offer the most flexible financial options in the business.

Short term, long term, lease-to-own, outright purchase, and more. Plus top service and support, including a toll-free hotline.

Phone (800) 835-3246, ext. 184 and ask for the applications expert nearest you.

## Aflps creates information issues panel

BOSTON, Va. — The American Federation of Information Processing Societies, Inc. (Aflps), based here, last week announced the formation of the National Information Issues Panel to provide U.S. legislators and the general public with expert advice on information policy.

An Aflps announcement said that Stephen S. Yau, president of Aflps, described the project as a "catalyst for communications between legislators and the information processing community." The panel reportedly will hold several public meetings in the fall and will publish reports on specific topics.

Aflps selected Robert Lee Chartrand, senior specialist in information policy and technology at the Congressional Research Service here, as chairman of the panel. Yau, chairman of the Department of Electrical Engineering and Computer Science at Northwestern University in Evanston, Ill., will also participate as a panelist.

Aflps, established in 1961, is a federation of 11 scientific and educational societies in the information processing field.

## Intech meeting set for August

ALEXANDRIA, Va. — The third annual Integrated Information Technology Conference and Exposition (Intech) will be held Aug. 28-29 at the Monroe Center in San Francisco.

Designed for users of corporate information systems, the four-day conference will include sessions on information security, networks, personal computers, integrated voice/data networks and technology management.

Registration for Intech is \$395 before July 15 and \$495 after July 15. More information is available from National Trade Production, Inc., located at Suite 400, 2111 Eisenhower Ave., Alexandria, Va. 22314.

CICS Program Analysis

### Data Management

Summarize and compress application and system data into a cumulative file. Long range reporting via user-defined control fields and double word capacity. One job execution for reporting and historical management of all systems.

- Automatic monthly history retention
- User defined history control fields
- Tape and disk support for all operating systems
- Capacity planning and trend analysis reports

### Data Collection

Comprehensive record of transaction performance. System overlaid in five categories. Each day's environmental and performance history maintained for online access.

- User defined file controls
- Space saving data compression
- Supports UFO™, MANTIS™, GENBUCK™, NODURAL™, and DMB™
- Automatic file superfluousing and file wrap around option
- User friendly clocks, counters, and online calls
- High performance VSAM REXX

### Reporting and Accounting

Custom hardcopy reports assist in performance and trend analysis, capacity planning, transaction accounting, and problem determination. Select, edit, and export data via the report writer. Changes based on resource fields, total cost or actual consumption.

- CICS overlaid, user clocks, and counter reports
- User calls and daily total page
- Report tables and automatic field spacing
- Variable page length and width
- Data selection and exclusion

### Online Features

Online features utilize "user friendly" techniques. Sequences for application loading, library status system, Graphic: making, test, storage, and file monitoring systems.

- Automatic problem status
- Track and time CICS storage
- Daily performance reply
- Online historic data reader
- Shows CICS file and RLA database performance

# COMPUTER FAT.

HOW TO AVOID IT, FROM THE LEADER  
IN ON-LINE TRANSACTION PROCESSING.

## WHAT COMPUTER FAT IS.

Computer fat is created when you buy more computer than you need. With conventional computer architecture, you have no other choice. You buy the closest fit available and "grow into it."

So there is always waste and inefficiency. And you pay dearly for it.

## WHAT IT COSTS.

**The performance cost.** With conventional computer architecture, doubling your processors does not double your performance. With Tandem, each incremental increase in processing power provides matching performance.

**The dollar cost.** With conventional computer architecture, growth is convulsive. You must continually over-invest to assure sufficient processing power. With Tandem, growth matches need. You never invest more than you have to.

## TANDEM'S NON-FAT ARCHITECTURE.

Tandem Computers has developed the ultimate system for on-line transaction processing. It is the fault-tolerant system that can grow as your needs grow, expanding at any increment you choose.

You can start with two processors and grow to 16 processors in a system. You can put in a fiber-optic link and grow to a local network of 14 systems. With a combination of land lines and a satellite link, you can expand to 255 systems (4,080 processors) worldwide.

*In a Tandem system, there are no idle backup components.  
They all share the workload.*

With Tandem, your software expands, too. All systems work like one system, and you'll never have to rewrite a line of applications code.

The Tandem NonStop® system is also enhanced by a high-performance, relational data base that can be geographically distributed to wherever it's needed. And no single component failure can shut you down.

## LET'S CHEW THE FAT.

Tandem systems are already at work for FORTUNE 500 companies in banking, telecommunications, manufacturing, transportation, retailing and energy, as well as several branches of the U.S. Government.

To find out what we can do for you, call (800) 482-6336. Or write for our annual report. Corporate Headquarters: 19191 Vallico Parkway, Dept. 762, Cupertino, California 95014.

## NEWS

# USDA to begin electronic transmission of farm reports

By William Bette  
CIW Washington Bureau

WASHINGTON, D.C. — The U.S. Department of Agriculture (USDA), continuing its aggressive use of computers for information dissemination, recently announced it will offer electronic transmission of farm reports to commercial information vendors, who in turn will sell the USDA reports to farmers.

In response to increasing demand for statistical reports and other agricultural intelligence, USDA officials said the new service will provide built versions of the data through Martin Marietta Data Systems, Inc. of Orlando, Fla., beginning July 1.

For the first time, USDA reports will be available from a single electronic source.

## User organizations

Users will most likely be organizations that further distribute USDA information, such as data base and videotex vendors, farm organizations, trade groups and news services and newsletter publishers, the USDA said.

The agency stressed that the service will only supplement the USDA's traditional methods of printing and distributing information.

Martin Marietta Data Systems — which won a five-year contract through competitive bidding — will charge a minimum fee of \$150 per month, the agency said.

The USDA, sensitive to criticism of the increasing commercialization of information generated by the U.S. government, defended the decision to use a private vendor.

"The private sector, through competitive procedures, can provide the quality of service demanded [by users] at a reasonable cost to the government and users. USDA does not have available the computer capability to provide the level of service desired by users," the agency said in a statement.

## Hearing held

At a recent hearing held by the U.S. House Subcommittee on Government Information, Justice and Agriculture, the American Library Association and the Informa-

tion Industry Association (IIA), representing nearly 400 data base vendors, clashed on the subject of electronic dissemination of information and statistics gathered by the government.

The hearing was held to discuss the Reagan administration's recent proposal to rely heavily on private vendors to disseminate govern-

ment data [CW, March 25].

An IIA representative said that the information needs of the public are best met by a pluralistic, competitive marketplace, and the U.S. government generally should let private vendors disseminate government data.

The library group, however, asserted that this commercialization of government

information ultimately would limit access to only those people who can afford computers to gain access to the electronic data bases.

In 1981, the USDA was the first U.S. agency to try electronic dissemination and triggered the creation of Fednews, a service provided by ITT Dialcom, Inc. of Silver Spring, Md., which provides

on-line access to U.S. agency news releases.

Other members of Fednews include the White House, the U.S. Army Reserve, the Food and Drug Administration, the Federal Emergency Management Agency, the National Aeronautics and Space Administration and the departments of Labor and Interior.

company reportedly opted to drop Cybertel in favor of Caltrans.

## BRAZIL

**RIO DE JANEIRO** — A copyright application system that enables recording artists to access data about their copyrights has been developed here by U.S.-based Polygram, Inc. The interactive system, which features a data base and rate calcula-

tion capability, is being prepared for export, a spokesman said.

## FRANCE

**PARIS** — The first videotext terminal equipped with micro capabilities has been unveiled here by Logelux, an Ing. C. Olivetti & Co. company. The Parasma 800 machine, intended for mass distribution under the country's nationwide videotext project,

is an 8-bit system based on Intel, Inc.'s 286 microprocessor, with 64K bytes of random-access memory. The entry-level version is priced at \$1600.

## JAPAN

**TOKYO** — The Ministry of International Trade and Industry has sponsored a \$100 million, five-year project to promote the adoption of a Japanese-developed stan-

dard based on AT&T Unix. The project, known as Sigma, will develop a Japan-wide Unix-based network, which software developers will reportedly access at a low cost to facilitate the joint-development process.

The Sigma project is the result of a push from Hitachi Ltd. and Fujitsu Ltd., sources said, to alter the practice of importing software into Japan. The likely operating system to come out of the Sigma project will be a version of AT&T's Unix System V.

**TOKYO** — Fujitsu Ltd. is expected to unveil its Recort export development system during the Business Show, to be held here May 22-26. The price of the system will range between \$14,000 and \$20,000, insiders said. Recort reportedly will run on the vendor's artificial intelligence machine.

## SWEDEN

**STOCKHOLM** — Software and consulting firms are on the rise in Sweden as hardware companies decrease in number. According to the latest official figures on computer industry start-ups here, over 700 companies have been established in the computer field over the last three years.

During this period, software companies have reportedly increased their ranks by 50% each year, while hardware companies have decreased in number by 50% annually.

## WEST GERMANY

**ESCHBORN** — An analysis of attendance at the recent Hannover Faire revealed that IBM had the most popular booth in the Information Technology part of the show. In second place was Siemens AG, followed by the German computer vendor, Nindorf Computer GmbH.

The poll of attendees also indicated that 64% of the people on hand said they felt a stronger "inclination to buy or invest" than last year.

## IBM/38-36 BACKLOG REDUCTION

### The Software Revolution: Trends, Players, Market Dynamics in Personal Computer Software

By: Robert T. Farley  
Enterprise Information Systems, Inc.

The Software Revolution: Trends, Players, Market Dynamics in Personal Computer Software is a manager's guide to systems and productivity tool software, including operating systems, database management systems, telecommunication processors, word processors, spreadsheet calculators, business graphics and data tools, and — most importantly — integrated software. This decision-making guide manages today's office systems issues that the key to increasing productivity in the 1980s and beyond will be software integration, both within microcomputers and between micros and their more powerful host systems. The Software Revolution provides the background and guidelines essential for intelligent, informed software selection and integration in the industrial and office setting.

### CALL FOR PAPERS

#### 1984 SOCIETY FOR COMPUTER SIMULATION (SCS) MULTICONFERENCE San Diego, Jan. 22-26, 1986

Papers are now invited for the fifth annual computer simulation conference. Areas of interest include practical applications of modeling and simulation on microcomputers in business, engineering, finance, industry, ecology, medicine and science; software and hardware products intended to promote simulation on microcomputers — special modeling packages and computers intended

specifically for simulation; tutorials describing methods that can be used on microcomputers and packages that will run on microcomputers; languages, methodologies, statistical packages and other tools intended for use in modeling and simulation on microcomputers.

Papers of special interest might describe models that have many symbolic processes, use heuristic search, have a command structure separate from the knowledge domain and have expertise built into the model so that decisions by the user would be minimized.

Detailed abstracts and special session proposals should be sent by July 1 to SCS, P.O. Box 17600, San Diego, Calif. 92117.

#### OFFICE AUTOMATION SOCIETY'S THIRD ANNUAL CONFERENCE Minneapolis, Sept. 2-6

A call for papers has been issued for this third annual office automation conference. Authors should submit papers that are typed, double-spaced, to Jackie Teiss, Office Automation Society International, 2108 C Gallows Road, Vienna, Va. 22186. The deadline for the submission of papers for this conference is June 1.

#### PTC 86: THE 8TH ANNUAL FORUM OF THE PACIFIC TELECOMMUNICATIONS COUNCIL Honolulu, Jan. 15-18, 1986

Papers are now being sought for this eighth annual telecommunications forum. Papers are requested in each of the three following sub-themes: current developments, which will cover a broad spectrum including facilities development, business aspects, user needs and concerns, regulatory and policy questions, standards and economics. The focus may be on voice, data, video and broadcast topics; future developments, which will focus on probable implementations that will impact telecommunications as well as society in the 1990s and beyond.

Papers should focus on the technological aspects of telecommunications as well as on their possible social, economic and educational impact; and overviews of existing telecommunications training organizations and programs, including discussions of how programs relate to perceived future needs of trainees and users.

A one-page outline of the paper, which should be received by June 15, should be sent to: PTC 86, Suite 308, 1110 University Ave., Honolulu, Hawaii 96828.

#### EDP PERFORMANCE MANAGEMENT March 1986

Applied Computer Research, Inc., the sponsor of this seventh annual conference, has issued a call for participation. Applied Computer Research is seeking speakers, panelists and chairmen. No formal papers are required. Key interests are user experiences and case studies presented by data processing managers and their staffs. The deadline for submissions is July 15.

Anyone interested in participating may contact Applied Computer Research, P.O. Box 8556, Phoenix, Ariz. 85066.

ANNOUNCING  
SYSTEM V

SERIX

**...puts your  
IBM Series/1 ahead  
of the pack!**

SERIX is the high performance CBI version of AT&T's UNIX™ System V operating system with Security 4.1 enhancements ported to the IBM Series/1 microcomputer.

SERIX transforms your Series/1 into an even more powerful, flexible, and consistent processor for general data processing, office automation, communications, and process control. Its advantages are outstanding:

**Reduced software costs**

- Long term growth path
- Software is highly portable
- Provides access to a large, growing software base

**More power from the Series/1**

- Optimizing C compiler uses native code features
- All code resident
- Dynamic memory allocation without fixed partitions

**Increased programmer productivity**

- Large set of utilities
- Modularized file structure
- Files, tables, comparisons, and shared data segments

**Other CBI Series/1 software**

- FINACOL™
- UNIP™ database management system
- VisuComp™ spreadsheet
- Visual editor
- EDC™ to dBASE™ conversion kit

CBI Corporation is a Master Value-added Reseller of IBM Series/1 equipment. Listing and other benefits arrangements are available. Contact us for further information.

# OF THE BIG THREE IN BUSINESS SOFTWARE, WHO'S THE REAL NUMBER ONE?

If you know corporate software, you know that only three companies are really capable of offering a "total solution" product line. Everything from general ledger to a PC link with your mainframe.

And if your company's sales are \$100 million or more, the amount you're likely to invest in corporate software is of such magnitude you undoubtedly should talk to all three.

Not only will you become a more informed buyer, but a more satisfied owner after you buy.

Our recommendation to shop the big three is offered with confidence. And with certainty that once a competitive evaluation ensues, the chance of your choosing McCormack & Dodge easily exceeds one in three. Because, not long after you begin your analysis, the differences will become apparent. Differences in what each company actually means when it claims to have a total software solution, and a totally integrated software line.

We believe your evaluation will show you this:

Two companies offer the mere appearance of integration. An agglomeration of

business applications linked superficially. Through a web of hinges, patches, bridges, shadow files and masks lurking just below the surface.

While one offers the real thing, Millennium. A true family of systems in which the whole works as smoothly as any part. In which every package has the same query mechanism, the same report writers, the same screen generation, the same on-line documentation, security and real-time capabilities. So that when the packages are put together, there are absolutely no borders between them. They fit like pieces in a jigsaw puzzle. Making the most efficient use of all your data processing resources. There's even a Millennium application development tool, so you can create new systems as you need them. Without slow, expensive programming.

Millennium means integration in fact. Not just in name. And it is available only from McCormack & Dodge.

Of the big three in software, who's really number one?

Don't stop asking until you know.

## MCCORMACK & DODGE

## Artificial Intelligence & Personal Computers

Artificial Intelligence & Personal Computers  
June 19-21

The personal computer market offers the most valuable opportunities for artificial intelligence technology. But when will this emerging technology be available for personal computers?

And what are the strategic implications for decision-makers today?

Find out at *Artificial Intelligence & Personal Computers*, June 19-21 at the Ryeat Regency Business in Dallas. It's the first industry event to focus on the impact of artificial intelligence on the personal computer industry.

Speakers: Gary Berman, Dallas  
Sponsored by Computer World News and InformationWeek.

**Artificial Intelligence & Personal Computers** features Future Computing senior staff and top executives from companies in the personal computer and artificial intelligence industries. They'll discuss:

- o personal computers as target vs. development machines for AI applications
- o personal computer capabilities in 1990
- o the current state of commercial expert systems

- o personal computer based development tools
- o productivity and decision support system features
- o AI as the basis for new software applications
- o distribution channels for knowledge based products
- o future trends in AI and the personal computer industry

### Panel Speakers

Peter L. Gold, President  
Atty Corporation

Paul H. Kohn, Chairman  
Artificial Intelligence, Inc.

Larry Gold, President  
The Computer Group

Dr. David Tuckman, Dir. of Research & Development  
Business Support Systems

James E. Hill, Mgr., AI Technical Group  
Harris Education Center

Arthur Davis, President  
Software Development, Inc.

Shirley Smith, President

**MORE THAN 800 LARGE  
NETWORK USERS  
DON'T HAVE TO FIT  
NCR COMTEN.**

**NCR COMTEN FITS THEM.**

There are two basic choices in developing a data communications network: you can compromise your objectives to fit the limitations of the system; or you can choose a system with a flexibility to accommodate your needs.

NCR Comten gives you the latter option. Our Communications Network Architecture lets you accommodate yesterday's and today's technologies in your present network and anticipates future and emerging technologies without major equipment change.

Fitting our system to your needs is just part of the NCR Comten story. You'll find more good reasons in our special executive briefing. For details, write "Data Communications Systems", NCR Comten, Inc., Department 8015, 2700 Snelling Ave. N., St. Paul, MN 55113. Or call 1-800-334-2227. In Canada, call 1-800-543-5713.

**NCR COMTEN. KNOWN BY THE COMPANIES WE SERVE.**

**NCR**

NCR Comten, Inc.

# EDITORIAL

## Much ado

The most interesting news by far to come from the otherwise lackluster Comdex/Spring '88 was IBM's confirmation of plans to bundle software packages free of charge with Personal Computer XT sales, at least for a limited time (ENR, May 15). Although IBM bristles at hearing the term "bundling," we can't think of a better description.

Reaction from the vendor and dealer communities was predictable, ranging from outrage to taciturn recognition of IBM's plans to be No. 1 in every market niche in which it operates — meaning the company will strive for first place in every computer market niche.

It is surprising that anyone, particularly IBM's competitors in the micro software arena, should have been taken unaware by the move at all. It's not that the move was predicted—it wasn't. Rather, the strategy will help move a piece of hardware, that was not be sitting as fast as Big Blue would like, as well as software packages that are playing second and third fiddle to other software vendors' offerings. This position can only be viewed as very uncomfortable by a company accustomed to dominating the competitors and is therefore a harbinger of such "drastic" actions as bundling a couple of diskettes with hardware.

Some of the more puerile competitors tried hard to raise the specter of antitrust in the matter. In this case, such charges are not only ridiculous (IBM hardly dominates the micro software market, which is about as competitive as any in the computer business), but they also ignore the more apparent realities of dot-com business.

IBM's competitors should try to see the situation for what it really is — namely, one company practicing competition and capitalism better than perhaps any other company does.

And that is the key to what struggling and successful micro software and hardware companies must do to survive in an IBM-dominated world. Users cry for site licensing and cheaper packages for corporate mass packages, but many vendors offer them cumbersome lock-and-key antipiracy systems. IBM — for a little while anyway — gives away the software. Get the picture?

We may be the No. 1 weekly serving the computer community, but that doesn't stop us from continually trying to upgrade our publication. In this vein, we recently added to *Computerworld* two features, both designed to give our readers quick blasts of information in a concise format.

Our Random Access column was launched last month and will appear most weeks on page 2. The column will consist of brief items regarding product information, industry rumblings, tender plans and other snippets of information gathered from reliable sources but which often have not been released for general consumption. We hope this column will give our readers the benefit of the ad hoc heads our reporters develop.

Last week on page 6 we ran Reporter's Notebook, a feature consisting of general-interest news briefs gleaned from Computerworld's extensive conference and computer show coverage. Reporter's Notebook, to be run irregularly, seeks to give readers a glance at the mood, points of interest and general tenor of a conference.

We trust you'll enjoy both additions, and we welcome your comments.

## LETTERS

## Suggested software rental bans rapped

Efforts by selfish special interest groups that wish to have a law passed against renting software could not be more contrary to the capitalistic ideal. Those groups were discussed in the column "Proposed software rental ban warrants careful review" [CW, March 28]. Why single out one industry or one class of product and say it cannot be rented when all other products in other industries can be rented?

These groups' motivation seems to be the high incidence of piracy in the software business. However, the pirates are not to blame — the software companies are. For the same reason that banks do not leave their money on the sidewalk, software companies have an obligation to protect their products. Software companies lacking the tech-

logical capability to do this should get into some other line of work.

My company has shipped thousands of software products, none of which has been copied and none of which has been installed on more than one machine. My company does this because most of its customers prefer to rent.

Some companies cannot afford the capital outlay of purchasing software and prefer to rent on an ongoing basis, just as some people prefer to rent rather than purchase their dwellings. Refusing someone shelter because he cannot afford to buy a dwelling would not make sense from either an economic or a moral standpoint.

David E. Proffman  
Mallin, CA

# Identifying, tracing reruns cuts expenses

THE DATA CENTER  
John F. Masny

**D**oes your data center experience considerable difficulty in meeting its schedule commitment? Are clients unhappy with its service level? Does the pressure within the data center to increase faster data output appear overstated by the increase in work load? Is data center operations expensive a serious factor because it always seems to exceed the budget, sometimes by a considerable amount?

These concerns may be caused by a variety of factors, but it is likely that one factor, often the major factor in such a situation, is the rate of volume of data center production work.

Do you know how many of your resources are devoted to reruns? Data managers know the problem firsthand and know for reruns for a given period? What, if anything, is being done to control reruns? Are reruns even considered an important time in your production, or are they simply viewed as something to be tolerated, or worse yet, ignored?

An important aspect of the effective management of the data center operation is the ability to identify and control reruns. The obvious reason is to help conserve the quality service resources required and to substantially reduce the effect on the cost of the data center. This will substantially reduce the cost of the data center. The less reruns you produce, the less the cost of the data center. This is the goal of the data center operation and consequently the effort to eliminate reruns.

Survey is director of management information systems at Research Corp., Washington, D.C., and director of Management Information Systems at a Corporate Services, published by Don Jones-Flyde.

There is a difference between the operation of the data center and that of a manufacturing plant. The operation of the data center is a manufacturing operation and can be compared to the data center. A critical aspect of a manufacturing operation is the control of scrap.

Efficient scrap factory management, using less scrap, can improve the data center. In fact, the scrap problem for the data center. In fact, reruns are a bit more serious in the data center because some of the resources involved in the manufacturing process in the factory often can be re-used. In the data center, every rerun represents

99

**Rerun reruns represents a total loss. A high incidence of data center reruns — anything in excess of 5% or 5% of total jobs and total real-time hours — is an indication of poor data center management.**

a total loss. There is no chance for any recovery or recovery of any of the resources.

A high incidence of data center reruns — anything in excess of 5% or 5% of total jobs and total real-time hours — is an indication of poor data center management. It also may indicate poor job management. The data center management is responsible for the data center. This is because many times, not just the data center, are responsible for reruns, which are often responsible for reruns in other areas.

In the management of a particular rerun, the rerun is a data center error. It is because of the rerun that the rerun is the result of a programming error?

Of poor documentation? Might it even be a different rerun? An incorrect data package?

There is no doubt that the data center management reports must be understood. The management must understand that can cause reruns, and these people must be willing to discharge responsibility to reducing the reruns.

Effective reruns indicate an information processing department's poor health. When reruns are so high that they can be used to identify reruns as well as their volume, improving the health of the data center is impossible. Because the appearance of a high rate of reruns — poor data center service levels, failure to meet data center schedules and increasing pressure on the data center, for example — tell upon the data center manager, it is in his best interest to locate the problem and develop a plan to correct it.

Management steps as a concern

The first step then is to admit that reruns are an area of concern. The next step is to capture information about the number of reruns in any given period. When determining a rerun? If the data center uses separate systems for testing and production, any job in the production system presented more than the scheduled number of times in any given period will be charged with reruns for any job in excess of the scheduled number.

Periodic reports should be produced to show the number of reruns for the period, the reasons for these reruns and the amount of CPU and real time associated with each rerun. The report should also give a sufficiently wide distribution so that those areas responsible for the reruns are alerted to the fact that they have caused reruns and that an effort is under way to reduce the incidence of reruns. This is an effort to reduce the reruns in the rerun problem, and it should be made clear that the management of the information processing department supports the effort.

In addition to identifying the reruns and the CPU and real time associated with them, the rerun is the result of a programming error?

## A little help can make maintenance's job less thankless

MANAGEMENT  
STRATEGIES  
Victor F. Cook

**S**oftware maintenance is one of those thankless jobs that no one acknowledges when it's done right and everyone blames when it's not. For every installed system, part of the job of the maintenance group is to track down and get rid of the remaining bugs, but regardless of the number of bugs, the development people usually get the credit. Once a system is installed, maintenance gets to make the changes the user wants, one after another, until the system is replaced and the whole cycle begins again.

If there is anything more thankless than being in a software maintenance group, it is supervising one. Of course, on the production side, the job has a built-in character. Good maintenance supervisors become the gold cops — unapproachable, level-headed and not swayed by anything but facts.

Cook is a senior associate with McHale/Delleo Associates in Bay Shore, N.Y.

do and skeptical of everything people say — the kind of person you would trust to help you buy a used car or sign off on a new system.

First, then, you begin the rounds, stop in at the maintenance supervisor's office. Instead of "hi," "hi," and "hi," you begin the rounds, stop in at the maintenance supervisor's office. Instead of "hi," "hi," and "hi," you begin the rounds, stop in at the maintenance supervisor's office. Instead of "hi," "hi," and "hi," you begin the rounds, stop in at the maintenance supervisor's office.

**Next time you make the rounds, stop in at the maintenance supervisor's office. Does the plaque on the wall read "Sluggish had it easy"? Is there a hair shirt on the coat rack? If so, maybe a few things can be done to help.**

"probably" and "I'm not sure" are the words on the wall read "Sluggish had it easy"? Is there a hair shirt on the coat rack? If so, maybe a few things can be done to help.

Then, remember that you have a staff and long-term system and that the staff is the key to the success of the system. The staff is the key to the success of the system. The staff is the key to the success of the system. The staff is the key to the success of the system.

Establish some kind of a paperwork procedure that requires the users to submit these change specifications in some kind of uniform format — a change order system. But this is only the first step.

Users often have little feeling for the relative complexity of a change. In most cases, users can only specify

99

changes from their own perspective — the management of these changes is the responsibility of the staff. The staff is the key to the success of the system. The staff is the key to the success of the system. The staff is the key to the success of the system.

entry system and changing the layout of a screen. This misunderstanding gives rise to billing and scheduling arguments.

Another problem is that these changes come at odd times and in unpredictable quantities and if they have any priorities set on them at all, they are not by the users. Usually it's a simple "fix it." In short, the maintenance group becomes more of a "fix it" group than a "fix it" group. The maintenance group becomes more of a "fix it" group than a "fix it" group.

User-driven maintenance results in a system that gets revised far too often and for conflicting reasons. It is beyond the power of the maintenance supervisor to do anything about these problems. However, the IF manager does have the power and can get together with the manager of the user department to make decisions under all around. One simple, effective solution is to go to fixed periods to implement the changes.

Suppose the IF manager and user department manager agree that maintenance will only be handled quarterly and that there will be a fixed deadline for the submission of change requests — say the middle of each quarter. If the user department is told the IF manager can guarantee that, whatever the maintenance deadline and the end of the quarter, the maintenance will be handled by the middle of each quarter.

See EDITORIAL page 20

## VIEWPOINT

# Copy-protecting software addresses wrong problem

**MANAGER'S  
PERSPECTIVE**  
Robert V. Jacobson

The current discussion of software piracy seems to have missed a key point. Every prudent manager properly makes backup copies of his mainframe systems and applications software for all the well-known reasons. These copies ensure supply to software, which is run on the manager's microcomputers. A manager who relies on software that he cannot back up is not prudent.

There is an inescapable conclusion: Regardless of whatever other features a software package may have, it just doesn't make sense to buy copy-protected software.

Arguments that support piracy on the grounds that software is too expensive are childish. Every software developer is entitled to protect his ownership rights. If a package is too expensive, market forces will quickly

come to bear.

The real issue is how to satisfy the backup requirement and protect the software vendor's property rights at the same time.

Business software should be available without copy protection. Vendors should offer licenses for several levels of usage — single-user, two to 10 simultaneous users, 10 to 50 users and 100 or more users at a single site — at appropriately increasing prices with manuals available at cost more or less.

Software licensees should expect to sign and return multiple-use license agreements and to abide by their terms.

Business and government agen-

cies must make it clear to employees that software piracy is illegal and contrary to policy. A number of firms are already doing so (CW, Feb. 4), and more should follow suit.

**Patching attempts fails**

Most firms and most employees are honest and can be expected to adhere to license agreement terms, but there is no realistic way vendors can expect to police outstanding license agreements. Because honest firms should not be expected to subsidize dishonest firms — which is the real effect on piracy — software vendors should make a reasonable effort to identify and stop the pirates.

Unfortunately, the only practical

method seems to be the use of informers. Consequently, vendors — perhaps working through a trade association — should offer substantial rewards for information leading to conviction for piracy.

Copy protection is a futile exercise to solve the wrong problem. Ultimately, software must reside in some memory in an executable form. This means that it can and will be copied by the pirates no matter what the vendor does.

Inevitably, it is the honest user who suffers, because ultimately he is paying for the copy protection, the pirated copies and, worst of all, the risk of running with software that is not locked up.

Jacobson is president of New York-based International Security Technology, Inc.

### Bypass point misleading

Your recent series on bypass was excellent. Generally, I agreed with the editorial "Opportunity calling" (CW, April 22) — an editorial that took a balanced look at divestiture.

The editorial stated that "divestiture did not make bypass possible." Although correct, that statement may also be misleading. Divestiture made bypass economically attractive for many customers. Before divestiture, AT&T had no incentive to bypass. AT&T could bypass in 1903 but, if it had done so, it would have lost money.

Before divestiture, MCI Communications Corp. and GTE Sprint Communications Corp. received local access at lower rates than they are charged today in areas where equal access has been made available. Divestiture created the incentive for massive bypass — incentives that did not exist before divestiture.

The largest part of the bypass problem has grown out of the fact that regulators require local telephone companies to charge far above cost for local-access service. This artificial pricing speeds the adoption of bypass and amplifies the economic shock when a large customer installs a bypass system.

My firm's study of bypass, commissioned by Bell Atlantic, shows that the vast majority of projected revenue loss due to bypass is caused by this uneconomic pricing of local-access service. The bypass problem, with its potential for stranded investment and unfair charges to small businesses and residential users, arises from an attempt to maintain a system of subsidies for local service.

## The #1 3270 alternative for people who want flexibility.

The need for a 3270 alternative shouldn't replace the need for keeping your terminal system flexible, your options open. That's why the #1 choice is Telex.

In look to Telex, and there's a lot to look at. In fact, next to IBM nobody sells more 3270 displays, printers, controllers and intelligent workstations than Telex. And for maximum flexibility Telex's wide range of terminals plug directly into Telex or IBM controllers. There's a choice of high-speed matrix or letter-quality output devi-

# CH

ces and easy-to-use, low-cost display printers, too.

But product selection isn't the only choice. Telex displays offer features like color graphics, monochrome or color monitors, and ergonomic tilt/swivel design. There's a selection of keyboards,

## VIEWPOINT

**LETTER** from page 38

which cannot be sustained in the postdivestiture world.

Not until we all recognize the need to restructure telephone prices to match the needs of the postdivestiture world can the bygone problem be solved.

Washington, D.C.

**Legislation vs. a day's work**

As a DP manager for the City of Baltimore, responsible for computer operations, data control and data entry, I have, of course, been following with keen interest the VDT "imbroglio," aptly described in the article "VDT Inseparable shifts in state legislatures" [CW, March 25].

There have been studies by impartial scientific organizations, vendor associations and the mainstream and over-prudent collective bargaining groups and unions.

However, putting aside for the moment the relative validity of any of these "studies," much is being made about nothing. I write such a harsh statement because in all of the studies I have read, little note is made about the operators or potential operators and the "refinement" frequency of the CRT, but at no time whatsoever have the studies mentioned the real world since of any operator that may be part and parcel of the job. The operators, if any, is not caused by looking at the CRT but rather at the source material the key operator is entering.

A proficient key entry operator spends very little time looking at the

CRT. As much as 80% to 90% of an operator's workday is spent looking at and interpreting what someone else has hand-written on some source document in much the same manner as a typewriter or a typist would. This constant totals 60 minutes, leaving at the document and 45 minutes, interpreting it in our 7.25-hour workday. Subtract from that the scheduled breaks and the low-end figure becomes the more prevalent.

Aside from the fact that the operator is indeed sitting in front of the VDT, the impact of which has yet to be determined, we essentially have nothing more than the ergonomic considerations that we should all afford our typists and word processors. Essentially, it all boils down to using a common sense, humanistic approach toward the operator, his environment and quality of work life.

We are all bombarded every second of every day by radio waves, TV waves and microwave, not to mention other radiation. Maybe pregnant women should not sit in front of a VDT; we just don't know at this time. We do know that they should not spend hours in it's been determined harmful to the mother and the baby, but many still do.

I had an opportunity to review a bill (H.R. 1264) that went before the Maryland legislature this year concerning VDT standards. Although it failed to pass this session, I'm positive it will return in succeeding years with the same oppressive restrictions to bear against the employer and vendor alike. If this bill is indicative of other legislative proposals, on a nationwide scale, then I urge DP managers to think of alternative methods of feeding these batch applications.

Certainly some type of standard may be required for machine construction and use, but it is this manager's opinion that if legislation of this type is allowed to pass as written and unchallenged by the general DP community, employers will have effectively abandoned their right to offer a fair day's work for a fair day's pay.

Robert E. Grunke  
Baltimore

**CUIRLE** from page 37

Maintenance staff will do two things: it will work up firm cost estimates and installation dates for the changes, grouping them as appropriate; and it will write the software equivalent of an environmental impact statement. This statement explains the relative complexity of the change and its possible risks. It is an important part of the deal because it justifies the costs to users by telling them for what they are really asking. This way, users can make informed decisions about whether or not they really want a change, and the DP manager is no longer driven solely by users' unmet priorities.

Users benefit because they know exactly what they are getting, when they will get it and what the costs will be in performance and money. The maintenance staff benefits because only four firm implementation dates exist for each system. The staff now has the chance to test the revised system as a stable piece of software before it goes on-line; this should end the vicious cycle of bug maintenance on change maintenance.

And in the process, something ought to be thrown in for the maintenance supervisor. A new shirt per, hap?

**REURNS** from page 37

part should show the dollar value (using the CPU hourly rate) of the various reruns. This practice can serve as a tool to gain the client's attention required for rerun problems to be taken seriously.

Addressing the rerun problem is not easy. If carried out aggressively, the move may generate hostility. The management of the data center must recognize this aspect of the effort but should not be deterred by it from moving ahead.

If reruns are attached and reduced, everyone will benefit. It is worth the effort; good management will insist that it be done.

too. Plus extended highlighting and light pen capability. Telex also offers controllers that support local print buffering, format storage and dual host communications.

There's a choice of service plans, too. Backed by over 2,000 Telex-dedicated

service and support people worldwide.

No wonder more and more companies are making Telex their 3270 alternative. . . It's the #1 choice.

## Careful planning eases conversion to MVS/XA

By John Gilchrist  
CM Staff

It may appear to be a gargantuan undertaking, but an upgrade to IBM's MVS/XA operating system can go relatively smoothly — provided the conversion is carefully planned.

That was the finding of a recent Xephon Technology Trimeter Ltd. study of nearly 90 large IBM sites that had undergone the migration from another of Big Blue's operating systems to MVS/XA. Despite the fact that most respondents made the move to MVS/XA to ease virtual storage constraints, the Newbury, England-based market research firm found that IBM's flagship operating system provides only relief, not a cure, for the ills of virtual storage cramp.

"Conversion is one of the great bogies of the IBM environment," the study stated, "and IBM has gone to great lengths to

minimize the problems of converting to XA [Extended Architecture] than it has for any other product."

The latest announcement of XA, for example, gave users explicit details of the [mistake] for product availability, restricted the impact of the change by offering compatibility of user applications between new and old operating regions and gave... details of how users could position their configurations to ease conversion to XA," the study said.

Based on the experiences of 89 users who upgraded to MVS/XA between 1988 and mid-1984, Xephon cautioned that proper positioning is a paramount prerequisite to a successful conversion. Xephon defined positioning as having all necessary versions of auxiliary software installed so they can be transferred to MVS/XA without modification.

**PERPLEX**  
John Conway  
on logic rules

## Programming by the rules

Just as the English language has rules of grammar, an programming languages have rules of discourse. And just as a violation of English rules may prevent a message from being clear, a violation of programming rules may make a program difficult to understand and thus maintain.

Software programmers don't see adverbs, adjectives or gerunds as they do write. Each programmer projects into the program's structure a mental image of how it should look. If the programmer's construct violates generally accepted programming rules, the code is likely to confuse an experienced analyst who tries to debug or enhance the program.

Extracting programming rules from the minds of programmers, which is where many of them reside, is a key aspect of research being conducted by Elliot Soloway of Yale University in New Haven, Conn.

The assistant professor and artificial intelligence researcher spoke on "Why Software Maintenance is Hard" at the Data Promoting Management Association's recent conference on maintenance in Dallas.

"There's a big difference between knowing what an IF statement is and knowing how to program," Soloway said. The Yale researcher has conducted a number of experiments using two versions of a program: a correct version

### SOFTWARE.DVD STORY

## One-vendor solution can pay off

It is the less-complex DP environment of just a few years ago, it was easy for technical managers and systems programmers to rely on their own skills for planning, maintenance and problem resolution, as well as for dealing with multiple software vendors.

Today, data centers are more complex by orders of magnitude. With more computing power available, a greater demand for service and stretched management and personnel resources, DP professionals can no longer afford to depend upon business solutions and ser-

vices from a combination of in-house and diverse, inaccessible external sources.

This complexity is one of the reasons for the growing popularity of the single-vendor, integrated software solution. DP executives claim that the more products they have from one vendor, the greater the effect they have on service, support, development and integration of the software.

DP executives will have to choose their software vendors more carefully as the trend toward single-vendor shops continues.

Choosing a single vendor for global DP needs involves careful evaluation. The rewards are great, but the pitfalls can be costly.

If the wrong vendor is chosen, one

## ELECTRONIC MAIL COMMUNICATION CENTER

### Lightyears Ahead...

The ONE electronic mail product that links all major operating environments: MVS, VSE, VM, CMS, CICS, TSO, AC/...

Emc<sup>2</sup> is easy to use. It's designed to get the mail moving fast.

Emc<sup>2</sup> functions as a super-efficient AC/VTAM application. This allows literally thousands of people in your company to use mail without needing TSO, CICS, or CMS user IDs!

Emc<sup>2</sup>

- Full-screen menus and help panels
- Scrollable submenus and submenus
- Uncomplicated text entry ● Mailing lists
- Bulletin boards ● Calendar features
- Timely Reminders "tickler file" (arrange for messages to be sent at some future date)
- Automatic new-mail notification
- Mail classes (partition Emc<sup>2</sup> into virtually separate mail systems)
- Efficient data base storage ● Simple installation
- Low administrative overhead
- Application programming interface

### PLUS

- Electronic mail networking between mainframe sites
- Integrated PC support and integrated PC file transfer

## SOFTWARE &amp; SERVICES

# Unix needs push to win in corporate micro market

By Kathleen Sullivan  
CW West Coast Bureau

**SAN JOSE, Calif.** — In the personal computer market, software has been a driving force. Software Arts, Inc.'s VisiCalc helped ensure the success of the Apple Computer, Inc. Apple II, while Lotus Development Corp.'s 1-2-3 propelled sales of the IBM Personal Computer. But in the AT&T Unix systems market, according to industry analyst Jean Yates, software has not yet served as such a catalyst.

That situation must change if Unix-based systems hope to win a place on the corporate desktop, said Yates, chairman of Yates Ventures, Inc., speaking before a recent semi-

nar audience here.

Although there are hundreds of software packages available for a variety of Unix-based systems, none have captured the imagination or the allegiance of users, she said. According to Yates, the market is crying out for an innovative software package that will push Unix forward.

"Showing its opportunity" in the office

"Unix software has not proven itself in the desktop market," she said. It has met with greater success in the scientific and engineering communities and is appreciated in government and military circles. But the product is "blowing its opportunity" in the office, she noted.

Describing the problem as the "1-2-3 syndrome," Yates said software availability will remain a key factor in the growth of the desktop Unix market. "If we don't get a [product like] 1-2-3 for Unix, I hope AT&T will get down on its knees to Lotus," she said. "Why would someone buy a desktop computer without a program like 1-2-3?"

According to Yates, the Unix proponents will not be able to look to IBM for guidance. While IBM will support individual contracts that require Unix-based systems, the company has not developed "an overall strategic direction on Unix," she said. "IBM will not be the company that actively waves the Unix banner or signs up a number of software developers."

AT&T, already a dominant force in the Unix market, should be the firm that shoulders that task, she added.

AT&T should make development effort

"I am tired of AT&T waffling around," Yates said. "It can afford [the development cost] and should be putting together a cohesive, coherent effort in software development. Other hardware companies cannot afford the multimillion-dollar investment required to provide this software."

According to Yates, the Unix software market will undergo a significant shift during the next five years. In 1984, software development tools accounted for 54% of Unix-based software package sales; by 1989, however, that number will drop to 31%, she said.

In 1984, word processing and accounting packages made up only a fraction of Unix-based applications sold — word processing took a 2% share and accounting took a 1% share, Yates noted. The remaining 45% included all other packages, including a "fair amount" of vertical-industry software, she said.

Within five years, however, integrated office automation packages will outdistance all other applications, claiming a 32% share of the Unix-based software market, Yates predicted.

## As Data Center Executive, are you signing a blank check?

If you can't verify your invoices for hardware and software quickly and easily, you may be spending more than you think—and more than you should.

The NERMAN® online data center audit communications management system stores detailed information so that you know the status of your hardware and software at all times, when payments are due and the exact amounts. A NERMAN report, on screen or in print, follows the standard industry invoice design so that details can easily be traced.

NERMAN keeps a full financial history so that tax credits, accurate lowest purchase, cost allocations, depreciation, budget figures and projections are at your fingertips. And that's not all.

A single database stores every relevant fact about your hardware, software, network links and any other items you may want to include. One user even entered air conditioning, the climate, generation and load-up equipment... "Everything we pay for," he said.

The system knows all the network configurations, component reliability and financial status. It can even tell you if something is outdated but not replaced or replaced but not installed. NERMAN also tracks problems and the methods and times of their resolution for some very meaningful answers. It helps if preventive problem history on every item and pinpoints trouble spots, patterns of problems, vendor responses and even operator responses so that the whole data processing and data communications environment can be fine-tuned for preventive action.

And NERMAN recognizes change by predicting the impact on related hardware and software. It avoids the complications and problems that arise so often when a configuration or system is altered.

NERMAN is the only Data Center Audit Communications Management System that tracks financial history and configurations, problems and changes. A significant reason of the national computer companies data centers use it. You should, too.

Call NERMAN for a demonstration or to schedule a demonstration. NERMAN is located at 10000 N. 10th Ave., Suite 100, Denver, CO 80231.

**NERMAN®**

## Uccel enhances UCC-8 software

**DALLAS** — Uccel Corp. announced Release 2.1 of its UCC-8 Data Center Management software for CICS applications in IBM MVS or MVS/3A environments.

Release 2.1 includes an interface to Uccel's UCC-4 hardware accounting system. Through a common inventory file, UCC-8 users reportedly can track equipment problems, outage and configuration changes. The UCC-4 interface adds the ability to track new equipment orders and manage financial aspects of the inventory, a spokesman said. The product also includes modifications to the UCC Problem Management and Change Management functions.

UCC-8 Version 2.1 is licensed for \$26,800.

Uccel is located at Uccel Tower, Exchange Park, Dallas, Texas 75235.

## Mark IV program tester out

WOODLAND HILLS — Information General Corp. has announced Mark-IVPT, an option that allows programs developed under the company's Mark IV development system to be tested and maintained in IBM's Interactive Systems Product Facility (ISPF) under TSO and CMS.

Mark-IVPT provides system checking capabilities for specifying Mark IV applications in an on-line, interactive environment, the vendor said. The product is designed to take advantage of recent enhancements to Release 2.0 of ISPF, including variable sized panels, scroll windows, 3279 default color displays and all screen sets, including 3280 terminals.

Programmers can prepare and test the Mark IV applications using full screen editing facilities, macros, keys and commands that are familiar to ISPF users. According to the vendor, full help facilities and a manual are included.

According to the vendor, Mark IV users with ISPF can code on-line with syntax verification, macros and test programs. The product also permits users to review test output and source listing at their terminals in one session.

Mark-IVPT, scheduled for September availability, is priced at \$18,000. Information General is located at 21061 Ventura Blvd., Woodland Hills, Calif. 91364.

## Foothill Research announces Style language enhancement

HELMONT, Calif. — Foothill Research, Inc. has announced Version 2.2 of Style, its programming language for 32-bit microcomputers and workstations running AT&T's Unix System V, University of California at Berkeley 4.3 and Version 7 operating systems.

Style also runs with Digital Equipment Corp.'s VMS operating system and Data General Corp.'s MV series with the AOS/V8 operating system, according to the vendor.

Style 2.2 reportedly includes windowing and user-programmable function keys, a transaction logging and recovery system that allows users to

keep track of changed records and new programming constructs.

The product also includes logical view capabilities that enable MIS managers to structure the data base so that users will see only pertinent information, the vendor said. The logging and recovery features allow users to make a copy of each record before or after the record is changed.

Style costs from \$17,500 to \$45,000, depending on configuration. The product will be available in the third quarter.

Foothill Research is located at Suite 300, 1301 Shearwater Blvd., Belmont, Calif. 94003.

## UPGRADE See page 41

"Early positioning has the benefit of perceiving the total conversion task in one manageable chunk at the relatively small expense of paying some license fees earlier than might be strictly necessary," the study stated.

Respondents to the Xephon study spent, on average, a little more than five months evaluating whether to make the move to IBM's XA.

Xephon found that those users who decided to migrate early after the introduction of XA spent no more time making the decision than those who converted later. That, the company said, indicates "industry experience has done little to facilitate the decision-making process."

### Compelling reason to upgrade

Twenty-three of the 39 users cited virtual storage constraints relief as the most compelling reason for making the upgrade to MVS/XA. "Since it is impossible to buy virtual storage," the study stated, "it is the major factor forcing migration. After tuning virtual storage, the only option is to migrate to XA."

But, Xephon warned, XA migration does not necessarily solve the problem of virtual storage constraint.

— It usually provides only temporary relief. Almost half of those users who had converted to MVS/XA said virtual storage constraint was still a problem following the move.

"Note that many users still suffer from [virtual storage constraint]," the study said. "Potential XA migrants should not assume that migration will solve all their virtual storage problems. Virtual storage will still need to be monitored and managed to avoid nasty surprises."

### Nearly percent gave good rating

Despite that sour note, more than 90% of the migrants said MVS/XA was either very good or excellent when asked to rate the operating system.

The major stumbling block to migration for most users appears to have been incompatible software — either in-house or independent vendor packages that would not operate with MVS/XA. Nearly half of the respondents said they encountered a software supplier that did not have an MVS/XA-compatible version of the product in use.

The study, titled "XA in Practice," is available for \$75 from Xephon's U.S. distributor FBS, P.O. Box 643, Cambridge, Mass. 02139.

## How to justify your VAXcluster.\*

Now Quantum RS is the answer. It is the only resource management system that allows you to report on VAX\* or VAXcluster resource usage from one central data base.

When you require resource accounting, performance analysis, capacity planning, budgeting, cost tracking or chargeback, Quantum RS gives you the information you need to plan, control and react to system requirements.

Take the guesswork out of system management and justify your VAXcluster with Quantum RS.

For a free informative booklet on Quantum RS, please call or return the coupon.\*

## SOFTWARE &amp; SERVICES

**SINGLE** See page 41

with limited growth potential, limited product offerings and poor service and support facilities, clients may find themselves rather quickly in the unhappy position of having to rebuild and reallocate their information processing needs.

Today, companies must recognize that they are not simply choosing a single product. They are setting a direction and selecting components that comprise a strategy from a single software vendor.

Various criteria must be considered before a new software product and vendor are brought into the corporate fold. Service has become a crucial factor — it is as important as the quality of the software product itself. Vendors know that in the early growth stages of any market, clients concentrate more on the technology of the product features.

Support, at this initial stage, means parts and services, or in the software industry, product installation and warranty. As a market matures and as client needs become more complex, product support expectations become more sophisticated.

**Your product support**

Experienced users require the support necessary to maximize their effective and efficient use of the product. When a vendor cannot, or does not, respond to these more sophisticated needs, research has shown that it is usually because the vendor lacks the inclination, expertise or resources. In cases such as those, support has been given an

unacceptably low priority by the vendor, which is short-sighted for both it and the client.

Service commitment and support capabilities must become a competitive marketing weapon among software vendors. Vendors will have to find faster and better ways of responding to clients' problems and needs. More important, they will have to develop innovative ways of marketing and distributing support services. New technology, for example the micro-to-mainframe link, can be used in creative and unique ways to benefit the DP department.

In an examination of recent request for proposals (RFP) submitted by Fortune 1,000 companies on a variety of software products, service and support were key issues. Typical RFP questions included: How many employees support the product — in

sales/marketing, in technical support, in development/maintenance? How many service locations are there? Is there a hot line? Who staffs it? How often? Is there a central method for reporting and resolving problems? What is it?

**Vendor efforts**

One Fortune 500 company listed the following among its criteria for choosing a vendor: The vendor must exhibit strong financial growth and expanding markets that would assure its capability to carry out maintenance commitments into the future. The system should have a strong user base of satisfied clients attesting to the system's flexibility, conversion and the vendor's response to problems.

RFPs are certainly not a new method of evaluating user concerns.

But there are more demands for service, support, training, financial stability and multiple product offerings than ever before. These client demands reflect the increasing growth and importance of the software industry.

These demands can be expected to become the key competitive issues and measures of software vendor performance during the next five years. Innovative technology will be assessed not merely in terms of its potential to improve a corporation's bottom line but upon the vendor's ability to service and support that technology as well.

The software firms that survive into the 1990s, will be those that can best answer the business and service/support needs of their clients and form long-term and expanding business partnerships with them.

## DDI announces enhanced data modeling tool

ANN ARBOR, Mich. — Database Design, Inc. (DDI) unveiled an enhanced version of its logical data modeling tool for IBM mainframes running MVS/TSO.

Data Designer II now includes an interactive, menu-driven user interface as well as a full screen facility for entering and editing descriptions of applications data requirements, a spellchecker aid. Also included are functions for incorporating "entity-relationship modeling" terminology and an interface with the company's Information Planner software for strategic planning of information systems.

Data Designer II accepts descriptions of the data requirements of applications acrossing the data base and will integrate the user views into a logical data model supporting those applications. Reporting and plotting options translate the model into design specifications customized to relational, hierarchical or Codasy data base environments, according to the vendor.

The interface to DDI's Information Planner ensures consistency between top-down and bottom-up approaches to data base design.

Data Designer II is priced at \$44,000.

DDI is located at 2020 Hogback Road, Ann Arbor, Mich. 48104.

KODAK INTRODUCES THE COM

# AUTOMATIC START TO

Mainframe

## It's the COM you asked for. A completely integrated system, automated and in-line.

Now your mainframe output can be printed by laser on film, processed, duplicated, and intelligently collated—yet nobody has to lift a finger.

No clock watching. No shuffling fiche into a duplicator. And no chemicals, because processing is by heat only.

You're looking at a real system, not parts

stuck together. A design that started with a blank sheet of paper and then took shape over the years as we listened to what you needed—and translated those needs into fresh ideas that are years ahead.

For instance, there's a systems manager. A powerful new business computer that actually runs the operation, and also provides instant system access when requested. One benefit is that less experience and training are required for operators.

There's also an exclusive buffer for fiche masters, automatic exposure adjustments triggered by bar codes, and a programmable

## SOFTWARE &amp; SERVICES

PROGRAM See page 41

and an incorrect version that violated one or two rules of programming discourse. The hypothesis was that given the incorrect version to debug, the performance of an expert programmer would be reduced to that of a novice.

"The rules of discourse are absolutely critical to writing good code," Soloway said. The more a programmer is patched and enhanced, the less its structure tends to follow the rules of discourse. "You can see why maintenance is hard," he said.

To better understand how programmers maintain programs, Soloway conducted an experiment in which senior programmers working in industry and novice programmers were each given two hours to make two enhancements to a program. The

programmers were interviewed and videotaped during the experiment. Quoting baseball veteran Yogi Berra, Soloway said, "You can observe a lot by just watching."

## Time usage revealing

A total of 16% of the expert programmers finished the task, compared with 85% of novice programmers. Most revealing was the way the expert and novice programmers used their time.

In a chronological review of the two-hour period, the experts spent 10% of their time reading documentation, 8% reading the assignment, 80% analyzing the program and 5% in writing code. The novices spent 10% of their time reading documentation, 8% reading the assignment, 10% analyzing the problem and 75% in writing code.

"Experts were more model directed. When they finished at documentation and code, it was more to verify their expectations. The novices were more code oriented," Soloway said. "All expert programmers were assessing the quality of the person who wrote the program," when they were analyzing the code, he said. The experts look at the global lay of the land in the code to judge whether the programmer could be trusted, or whether the program was written the way he would have. If the experts conclude that they cannot trust the programmer, "They get nervous and make a lot of judgments."

Once the experts completed their analysis, they immediately generated a plan for making the enhancements. "The novices didn't do this," Soloway said. Instead, the novices jumped into coding. "The experts

made more observations, and documentation more than [the] novices [did] and tried to get an overview initially," Soloway noted. One expert programmer said while reviewing the code, "I need the big picture."

Having less-experienced programmers debugging and enhancing programs may be counterproductive, the Soloway experiment. "A lot of maintenance is being done by people who don't have the models" in their heads, Soloway said.

Having experienced programmers is by no means the only factor in a good maintenance program. The expert programmer in Soloway's experiment did complete the enhancements, but "it was a terrible patch. The next guy that comes along to fix this program is going to blow his mind," Soloway said.

However, it was not the expert's fault that his patch violated a rule of discourse. The program documentation failed to make explicit what principles the company management wanted applied to its software. "The documentation did not support the goal plan analysis. It didn't tell the expert the information he needed. The expert programmer got lost," Soloway said.

DP managers should ensure that their company's maintenance goals and plans are explicit in documentation and that the documentation specifies which structures, modules and hierarchies are desired, Soloway advised.

Criticism of Soloway's experiments at Yale were that the way programs are too small, that the fast pace of technology makes careful study impractical and that the experiments are too expensive to perform.

But Soloway answered that keeping programs small allows him close control of the experiments until he is confident of his methods. "You've got to start somewhere," he said. Technology may be moving fast, but in the absence of data on whether a technology is beneficial, bad buying decisions can be made, he maintained.

# Who's out to get your computer?

## **Almost anyone.**

Nowadays, your data is vulnerable. From disgruntled or careless employees, to industrial spies and hackers, the potential for damage or theft is everywhere.

It's impossible to be over-protective. Which is why you need Codercard™

## **A totally different security system.**

Codercard adds a virtually impenetrable level of protection to your existing computer security systems.

And it goes one step further. It actually lets you monitor all of your other levels of protection. If someone attempts to breach your system, Codercard becomes an eyewitness. It can automatically tell you both when and where the attempt was made.

## **Double protection against break-ins.**

Unlike conventional security devices, Codercard is not just a hardware solution. Or a software solution. It's both, interlocked together.

At the heart of the system are tamper-proof "access cards" which are issued to authorized users.

Each card is only slightly thicker than a credit card, and contains a self-powered microprocessor with a unique ID number. A new complex series of algorithms with over 400

billion numerical combinations are used for authentication and authorization processing.

## **You select who gets in.**

With Codercard, you can tailor security to any organization. Or even to any user group. You decide who sees what information. When and where they see it. How much they see. And even how many times they see it.

For all the details, just give us a call. Ask for a demonstration. Because if you haven't seen Codercard in action, you haven't really considered every way to protect your total data environment.

Codercard. It's the right way to keep the wrong people out.

**CODERCARD.**

## MIS panel: Windows not the answer

By Matthew Sullivan

San Francisco Bureau

**PALO ALTO, Calif.** — After more than seven hours of presentations on visual user interfaces, including talks by the leading firms, the corporate MIS panel was asked to respond to the question: Are operating environments the solution you need?

Much to the surprise and chagrin of the audience, a trio of speakers, representing Pent, Harvick, Mitchell & Co., Wells Fargo Bank and Syntron Corp., delivered a polite but firm rejoinder: No.

"It doesn't seem to us, as users of the existing technology, that what is on the horizon will answer our needs, said Duane Bell, a partner in Pent Harvick & Co., San Jose, Calif. office. "We have other, more basic

concerns to wrestle with."

"If you put a price on it [windowing technology], I'm not sure I'd buy it," said Thomas Thibault, vice-president of business and systems planning in Wells Fargo's Walnut Creek, Calif. office.

"We don't feel a burning need for these products," said Helen Peters, director of office information services for Syntron, a pharmaceutical firm based here. "No one has been beating down my door for [IBM's] Topview [Microsoft Corp.'s] Windows or [Digital Research, Inc.'s] Gem," she said.

But the audience, brought together earlier this month by InfoCorp, a Cupertino, Calif.-based market research firm, pressed on.

Perhaps the panel was not familiar with

the new visual environments, someone in the audience suggested. After all, Topview has been available only a short time. Gem being shipped the previous week, and the oft-delayed Windows has not yet appeared on the market.

So the panel members were asked to comment on Apple Computer, Inc.'s Macintosh, the computer that introduced icons, windows, pull-down menus and mouse pointing devices to the general public last year.

"At Syntron, we have users that I would characterize as true believers [in the Macintosh]," Peters said. "For that reason, we have been dragging kicking and screaming down the Macintosh road. But we must

## Fire sale seen for last PCjr's

By Deborah Warner

San Jose

**ATLANTA** — IBM has 200,000 PCjr's sitting in its warehouses, and it will dump them on the market this year for about \$600 each, including a color monitor.

That was one of several predictions made regarding IBM and the microcomputer industry by analyst Amy Wohl, president of Amy Wohl & Associates in Bala Cynwyd, Pa.

Speaking recently at the Computer '85 trade show here, Wohl based her estimate on information gained from a key supplier of parts used in the PCjr. IBM could sell the machines to schools at a big discount and come off "looking like a good guy," she said, but she doubted that Big Blue would choose that route.

Wohl's most controversial prediction was that the Personal Computer AT "may not have a full life span" due to what she said were problems with its hard disk storage unit and the software that controls that unit. This, she said, could spell big trouble for the 50 Personal Computer AT. See FRONTS, page 55

**SMALL TALK**  
On the quiet side

## Does Mac XL spell stopgap strategy?

Stopgap is a person or thing serving as a temporary substitute for another; makeshift.

**A** t his lavish annual meeting in January, Apple Computer, Inc. borrowed a song from the Pointer Sisters to convey its corporate enthusiasm and warm up the audience. An Apple video was presented on a giant screen in the heart of "We're so excited, . . . and we just can't hide it." Apple Chairman Steven Jobs played tape for the main act, the Macintosh Office. Jobs introduced the AppleLink network, the LaserWriter printer and the Macintosh XL, which were billed as members of the product line that would give Apple a foothold in the

## Multimate WP products debut

Writing/editing unit, file manager in lineup

**ATLANTA** — In addition to a network version of its Multimate 5.3 word processor software (CW, May 13), Multimate International Corp. introduced a file manager and several word processing programs for the IBM Personal Computer earlier this month at Computex/Spring '85 here.

Multimate's 618K file manager, Multimate On File, reportedly allows users to search, sort and transfer mailing lists, records and office files produced with the Multimate word processor. The file manager organizes information into file boxes, with the number of boxes limited only by disk space. Multimate's merge utility is used to create customized letters and reports.

The 648K Multimate Advantage Professional Word Processor is said to be oriented toward professionals and to incorporate footnoting, table of contents generation and automatic section number-

## Oracle announces portable version of IBM SQL/DS and DB2

Any application written for IBM's SQL/DS or DB2 relational database systems can now be ported to DEC, DG, AT&T, HP and several other manufacturers' main, and a wide range of micro, including the IBM PC/XT and PC/AT.

Oracle Corporation introduced the first relational DBMS is 1979. Today ORACLE is the only relational database management system that is completely compatible with IBM's SQL/DS and DB2. Programs written for SQL/DS or DB2 will run unmodified on ORACLE.

Originally designed for IBM mainframes and DEC superminis, ORACLE is now available on a wide range of machines, from mainframes to PCs. And ORACLE offers an integration of 4th generation software tools not available with either SQL/DS or DB2.

■ Why not Cullinet, ADR or Pascal? There is a clearly defined standard for relational database systems. It's called SQL, and it's from IBM. Both ANSI and the US Government are in the process of adopting SQL as the standard database language. The Cullinet, ADR and FOCUS software packages each implement their own unique database language - each one pointing the user into

its own corner. Since its inception, Oracle Corporation has provided total IBM SQL compatibility.

Why choose Oracle over any other IBM mainframe. Why, then, even consider a database solution that runs only on IBM mainframes? Applications written with ORACLE will function properly on mainframes, minis and PCs. Because all versions of ORACLE are identical.

FOCUS, Cullinet and ADR offer either a limited standard, a completely different product or nothing at all (compatibility) for the PC. And some have microcomputer products.

■ Why not just go with DB2 or SQL/DS? A relational DBMS simplifies but does not by itself eliminate run time programming. Additional tools are necessary if users are to create and maintain their own applications.

DB2 and SQL/DS are relational systems, period. ORACLE is a relational DBMS plus integrated 4th generation software tools for application generation, report writing, color graphics and network communications.

■ Furthermore, SQL/DS and DB2 run only on IBM mainframes (and are somewhat difficult even to run on another vendor's system). ORACLE runs on more IBM hardware

and operating systems than do IBM's relational products. ■ Since IBM, HP, BBN, or Framework? PCs need more than PC software if they are to be usefully integrated with corporate data processing. Incompatibility with SQL, while serious, is not the only major problem with these micro packages. None provides an acceptable level of data security, integrity or recovery facilities. And their PC-to-mainframe links are functionally primitive and difficult to use.

To effectively link computers, all machines in the network should run the same software. Only ORACLE provides standard software on mainframes, minis and micros. Data and programs can then be shared among users of different machines, distributing the workload.

ORACLE is currently installed on over 1000 mainframes and superminis around the world, as well as on thousands of PCs. Oracle's customers include 8 out of 10 largest U.S. companies, as well as major foreign companies and government agencies.

For further information, contact Oracle Corp., Dept. CT, 2710 Sand Hill Rd., Menlo Park, CA 94025, or call 415/554-7330 ext. 1060.

**Introducing R:base**  
**Because your people**  
**be using applications than**

If you're like most M.I.S. directors, you're under pressure to be more productive than ever before.

And now, there's a new DBMS product that can take this heat off your department.

It's the all-new R:base™ 5000.

It doesn't matter if it's being used by your top programmer, a rookie sales manager, or anybody else in the company. With new R:base 5000, your people can develop custom, heavyweight applications—and save hours, even days of development time.

The secret of new R:base 5000? A unique, menu-driven Application Express™ feature that actually generates programming code. While guiding your users through the entire development process. So, instead of entering thousands of keystrokes, or writing lines of code, they just answer a series of simple questions. Then, the Application

Express does the rest. To speed things up even more, it includes instant forms and reports, too.

New R:base 5000 also features a fast new way for your staff to set up their databases:

**5000.  
would rather  
waiting for them.**

visually. They simply fill in the blanks in an on-screen table. And if they want to build menus into an application, they just tell the Application Express what to do, and it writes the code automatically.

For the novice users in your company, our new Application Express is a way to write complex applications right off the bat. And new R:base 5000 gives veteran programmers the heavyweight procedural language they need to build sophisticated applications and systems—with or without the Application Express. Either way, they'll always save time and increase their productivity. Because R:base 5000 also gives them fast and easy rules verification and data entry, along with a comprehensive report writer. There's even a compiler, to protect their application code.

New R:base 5000. It's the best way to give the whole company a big boost, and give yourself a break at the same time. Want to find out how? For only \$9.95 (plus shipping), we'll send you an interactive tutorial that actually lets you build sample applications. Just call 1-800-547-4000, Dept. 976. In Oregon, or outside the U.S., call 1-503-684-3000, Dept. 976. Or visit your nearest computer store or software dealer. (If you own R:base 4000, see your dealer about our trade-up kit.)

And see what it's like to have everything running your way.

**R:BASE 5000**  
FROM MICRORIM  
Your way. That's R way.™

PRODUCTIVITY:  
R:base 5000 vs. dBASE III  
CLIENT DATABASE MENU

Using R:base 5000 and dBASE III™, we built this menu and linked it to its sub-routines. The resulting applications were equivalent. The effort required wasn't.

	R:base 5000	dBASE III
Automated steps	37	0
Command lines	47	244
Keystrokes	434	8508

## MICROCOMPUTERS

## IBM micros get Access software

Microsoft tool allows tapping of data services

MILLVILLE, Wash. — Microsoft Corp. last week introduced Microsoft Access, a \$250 communications software package for the IBM Personal Computer line and compatible systems.

The software is designed to allow users to easily access a wide range of information services, including on-line data bases, information retrieval services and electronic mail, the company said.

Microsoft Access reportedly provides a menu system for information and electronic mail services, a command language, the ability to connect to multiple sources, conversion utilities for popular applications programs and support for communications with other personal computers and mainframes.

### Built-in interfaces

The package provides built-in interfaces for Dow Jones & Co. News/Business Retrieval, Compuserve Corp.'s Executive Information Service, Newsnet, Inc.'s Newsnet and the Official Airlines Guide information services, according to the company. Custom menus can translate a command into the sequence that a particular service requires.

Access also can batch several steps together to shorten connect time, Microsoft said.

The software reportedly stores requests in memory and automatically offers the same selection process the next time.

The package offers a menu for MCI Mail and Western Union, Inc.'s Easylink electronic mail services. It also is said to provide a text editor and in-box and out-box facilities.

In addition, Access features a Basic-like command language, Microsoft's Access Script Commands, that permits users to write their own scripts or custom menus.

Access can transfer data files to Lotus Development Corp.'s 1-2-3, Microsoft's Multiplan and Chart and programs with Data Interchange Format files.

The package can emulate Digital Equipment Corp. VT100 and VT52 terminals, Microsoft said. It supports both the Xenodex and Tymnet, Inc.'s X.P.C. transfer protocols. With or without X.P.C., Access provides a built-in windowing capability, according to the vendor.

The screen can be split into as many as eight windows, each with a different communications line or X.P.C. assignment.

Access is scheduled for Aug. 1 delivery. It requires 256K bytes of internal memory, PC-DOS or MS-DOS 2.0 or higher, two disk drives and an asynchronous communications card, Microsoft said.

More information is available from Microsoft at 10700 Northup Way, Box 97300, Bellevue, Wash. 98009.

## All Computers' multifunction AT1 card out

TORONTO — All Computers, Inc. has released a multifunction board that reportedly offers multitasking and multitimer capabilities for the IBM Personal Computer, Personal Computer XT and compatibles that have up to 4M bytes of memory expansion capacity.

A subset of the board reportedly allows bank switching and permits the use of packages such as Lotus Development Corp.'s upgraded versions of 1-2-3 and Symphony.

The All Card AT1 contains proprietary CMOS custom chips that perform memory management unit (MMU) functions that are needed to run AT&T's Unix operating system, the vendor said. The MMU functions are said to perform I/O operations and internal memory transfers simultaneously and to protect against one job interfering with others when multitasking or multitimer operations are being performed.

The All Card, in its basic configuration, costs \$395 and includes 128K bytes of memory expandable to 4M bytes,

the vendor said. With the MMU, the 128K-byte version costs \$495.

Another configuration priced at \$495 includes 128K bytes of memory, a serial port and a clock, the vendor said. A similar configuration with 256K bytes of memory costs \$595.

The cards can be configured with a mix of 64K-byte and 256K-byte random-access memory (RAM) chips, the vendor said. The MMU costs \$200 more.

All versions include software for a RAM disk, clock and spooling functions, the vendor said.

The board's oscillator clock is said to be identical to the one included in the Personal Computer AT, with battery-backed CMOS RAM and alarm interrupts. The serial port included in the All Card can be addressed with two addresses other than Com 1 and 2 for use in a multitimer configuration.

More information can be obtained from All Computers, Suite 501, 110 Bloor St. W., Toronto, Canada M5S 2W7.

# NOW IT ONLY TAKES ONE TO TANGO.

Say hello to PhoneMail™ and say hello to the One Party Phone Call. No more waiting for the phone to ring, waiting for someone on the other end, waiting for your telephone partner in another city, another meeting, another time zone. Waiting.

PhoneMail is not your basic phone answering gadget.

It's a digital voice-messaging system for your entire company that you can access

from any Touch Tone® telephone anywhere in the world, any time.

PhoneMail can answer your phone with your personal greeting. (If you'd prefer, your secretary can take the call and direct the caller to PhoneMail.)

It will let you answer messages automatically. It can forward them, along with your comments, to dozens of your associates. It lets you send messages to a whole roster of

\*Trademark of AT&T

4020 Oak Innovation Drive, M/S 020 Santa Clara, CA 95054

## IBM EZ-Prep, EZ-Bios software debut

### Allow micro execution of CSP applications

**ELY BROOK, N.Y.** — IBM has announced two software packages that reportedly allow the translation and execution of IBM C/Bus System Product (CSP) large-systems applications on the IBM Personal Computer, Personal Computer XT, AT and 3870 Personal Computer.

EZ-Prep is said to translate CSP programs developed on a host mainframe, while EZ-Bios reportedly executes the programs on the micro. CSP, a family of operations development products, currently operates

on IBM 4300 and 4300 series mainframes and 6100 class United systems, according to the supplier.

EZ-Prep and EZ-Bios reportedly support sequential, relative indexed and indexed files on the micro and feature programed inputs, help screens and field-level validation on entry.

#### Portables ease the transition

The products are said to allow transfer of message files and applications data files to and from the host and support applications development on the micro.

Files are transferred to the micro using any file transfer utility appropriate for the user's system configu-

ration. Mainframe applications must come from one of the following configurations: CICS/VS, IMS/VS, VM/SP, VS/ASE or ISVS/CO.

Both EZ-Prep and EZ-Bios require PC-DOS 2.0 or higher or the 3870 Personal Computer Control Program, Version 1.5 running on the 3870. Each requires two dedicated floppy disk drives or one dual-sided drive with a 1000-byte hard disk and the IBM monochrome display and printer adapter or color display with color/graphics adapter. Proposed licensees need \$1,500 for EZ-Prep and \$155 for EZ-Bios.

IBM's Information Systems Group is located at 900 King St., Rye Brook, N.Y. 10573.

## Net version of Higgins introduced

**SAN LEANDRO, Calif.** — Cosette Systems, Inc. has introduced a network version of its Higgins collaborative software for IBM Personal Computers running on 32-bit Open Channel Ethernet local-area networks.

Higgins is designed to take care of organizational issues such as time and event management, personal filing, telephone dialing, to-do lists, calendars and note-taking.

The network version has been integrated with IBM's Release and Shared Functions, according to the company, and Higgins can run in background while the user is working with other programs on the network. The package uses Release/Shared login and password protection schemes to control access to files.

Higgins works with a single copy of the software resident on the server or and does not require any buy disk on workstations, Cosette Systems said. The software will work on dual-line personal computers.

Higgins for the 32-bit Release/Shared PC Server is priced at \$695, while a version for the Server costs \$1,595.

More information is available from Cosette Systems at 1470 Peninsula Drive, San Leandro, Calif. 94572.

## Volkswriter Deluxe 2.2 out from Lifetree

**MONTREY, Calif.** — Lifetree Software, Inc. has enhanced its Volkswriter Deluxe word processing software for the IBM Personal Computer line.

Accompanied with a Pascal compiler, Volkswriter Deluxe 2.2 does not make disk overlays, boosting speed considerably, according to the company.

Support is now offered for IBM's Topview operating environment, allowing up to three copies of Volkswriter Deluxe 2.2 to run at one time on a 640K-byte system.

In addition, the release is said to incorporate a file filter that strips files of control characters and transmits only ASCII characters, adding up to 20 characters per second, three times the normal speed.

With use of an IBM Enhanced Graphics Adapter card, the word processor now can display 43 lines of text, according to Lifetree. It also supports the IBM Enhanced Graphics Adapter AT's high-speed keyboard option, permitting the keyboard to input up to 30 characters per second, three times the normal speed.

Volkswriter Deluxe 2.2 is priced at \$195. Registered users of Volkswriter 2.0 or 2.1 may upgrade for \$95, including the new manual. Volkswriter 1.5 and International Edition users may upgrade for \$165.

Lifetree Software is located at 411 Pacific St., Monterey, Calif. 93940.

folks. So you can forget about publishing reams of short memos. Its voice prompts guide you step by step. So there's no chance for miscommunication. Problems are solved. Decisions are moved along.

It works wonders with most any business telephone system. It'll cater to forty folks or a thousand—simply, swiftly, cost-effectively.

Of course, only BOLM has Phonolink. That's not surprising. We're the folks who

tought telephones and computers and people how to work together. We can show you the latest advanced ways to manage voice and data today, next year and into the next century.

an IBM company

800-545-6164, The Atlantic, California and Hawaii, and 415-555-5555.

## MICROCOMPUTERS

## Samna upgrades WP tools

ATLANTA — Samna Corp. has announced Release 2.0 of its Samna Word II and Samna+ word processing software for the IBM Personal Computer line.

Enhancements to both packages are said to include faster operating speed and support for IBM's Document Content Architecture, permitting Samna users to transfer documents to IBM's Distributed Office Support System.

Other enhancements include selectable output, which permits users to print to either a serial or parallel port or a file, and an enhanced directory, which identifies the space remaining on the disk.

In addition, the releases are said to

offer support for both IBM's PC-DOS and Microsoft Corp.'s MS-DOS 3.0 and to feature "hot key" support, which allows users to enter work temporarily in a Samna document and access another program resident in memory.

Additional features of the enhanced versions include the ability to specify a starting number for footnotes, prevent the default page with a single screen and Samna/Asci translation.

Samna Word II is priced at \$550. Samna+ costs \$495, according to the vendor.

Samna is located in Suite C-700, 2700 Northeast Expwy., Atlanta, Ga. 30045.

## SOFTWARE

**S Programming Concepts, Inc.** has announced *Clint*, software that provides printed output of source code for programs written in C.

*Clint* enables a programmer to set program pagination, utilize optional variable tabs and special printer controls, the vendor said. The product reportedly makes debugging a C program easier by allowing a programmer to merge address information and a program listing. *Clint* generates a variable name, cross-reference list for each source code module.

*Clint* runs on an IBM Personal Computer with IBM's PC-DOS 1.1 or 2.0 operating system.

The program costs \$129. *Programming Concepts, 40 Orville Drive, Bohemia, N.Y. 11716.*

**S Independence Technology, Inc.** has announced that its relational database package, *Relix*, is now available for the AT&T 586 and independent computer and Altiex Computing System, Inc.'s 586 and 588 microcomputers running AT&T's Unix operating system.

*Relix* features reportedly include multiple perspectives on the database for different classes of users and queries that search across multiple data bases without specification as to where the data resides.

*Relix* includes an English-like command language, a compilable relational programming language and a C language interface. *Relix* for the AT&T 586, the Altiex 586 or the Altiex 588 is priced at \$1,495.

*Independence Technology, 5301 Ivy Lane, Greenbelt, Md. 20770.*

**S Datamatic Corp.** has announced that the Unix System V operating system for its line of supermini-computers now includes multuser windowing capabilities. The company also announced that Access Technology, Inc.'s 58/58 spreadsheet package now runs on its Unix-based 588 superminis.

The windowing capability is said to be transparent to applications. Users can work with up to eight active windows, including a command window with full terminal emulation and viewing control for each window. Applications, commands and utilities can be viewed simultaneously.

English language commands are displayed in a command window, according to a spokesman.

Other features include horizontal and vertical scrolling, paging and dynamic cloning and pinning. A window library stores up to 48 predefined windows that can be recalled at any time by the user, the spokesman said.

The list price of a Datamatic command on page 59

firmware including 14 windowing terminals, a Datamedia 903 supercard and the Unix operating system with windowing is \$40,170.

Access Technology's 20/20 package sells for \$950 for eight users.

Datamedia, 401 Ashurst St., Nashua, N.H.

■ The ICU Group has announced emulation software for Digital Research, Inc.'s CP/M 80 operating system that gives IBM Personal Computer, XT, AT and compatible computers under Microsoft Corp.'s MS-DOS 2.0 or later versions the ability to run CP/M 80 programs without an additional coprocessor board.

CP/EM is said to allow Microsoft's MS-DOS to redirect I/O devices for

use in altering device assignments, which allows CP/EM access to all standard MS-DOS devices and any installed device driver.

Serial communications programs are included with CP/EM to aid in the transfer of programs and data between CP/M and the MS-DOS computer.

The program costs \$79.95. The ICU Group, P.O. Box 10116, Rochester, N.Y. 14610.

■ Access Technology, Inc. has announced its Pro 20/20 language spreadsheet program for Digital Equipment Corp. Professional series computers.

Pro 20/20 is said to allow users to paste spreadsheets or graphs into DEC's Prose Plus word processing package documents and to access

DEC's Procomm communications program without editing Pro 20/20.

The package is a smaller version of Access Technology's 20/20 program, which runs on DEC's VAX series machines, the vendor said.

The package costs \$600. Access Technology, Six Pleasant St., S. Natick, Mass. 01760.

■ Thorn EMU Computer Software, Inc. has unwrapped its Perfect Draw graphics design program, which allows users of the company's Perfect Writer word processing program to create and add illustrations and stylized text to their documents.

The package runs on IBM Personal Computer, Personal Computer XT and Personal Computer AT computers and Apple Computer, Inc.'s Apple

IIe and IIC microcomputers.

Users are used to operate the program, the vendor said. The program is said to be compatible with input devices including a mouse, joystick, graphics tablet and light pen.

The package costs \$60. Thorn EMU Computer Software, 1801 Langley Ave., Irvine, Calif. 92714.

■ Accent Data Group, Inc. has announced that its Primavera Project Planner software has been updated to operate on the Smith Data Systems Corp. line of microcomputers, as well as on the IBM Personal Computer and its compatibles.

The upgraded version reportedly will run on Zenith's Z-100, Z-110, Z-150 and Z-160 models that use Micro-

ing. Also included are line and box drawing, forms generation capability and file and list management.

Multimate Executive Word Processor, priced at \$400, offers full compatibility with Multimate Advantage and provides, at hand, basic word processing features for such functions as writing memos or first-draft reports.

The \$245 Just Write package is said to be an entry-level word processor that offers basic writing and editing functions in addition to footnoting. It runs on the PCjr as well as the rest of the Personal Computer line.

Multimate On File requires 128K bytes of memory. Multimate Advantage and Multimate Executive each need 320K bytes of memory. Just Write requires 128K bytes of memory. All except Just Write require IBM's PC-DOS 2.0 or higher. Just Write requires PC-DOS 2.1 on the PCjr and 2.0 on other Personal Computers.

Multimate is located at 53 Oakland Ave. N., East Hartford, Conn. 06108.

## WOHL from page 47

competitions announced so far. "IBM may bring out a product that replaces it before [IBM-compatible makers] are able to take hold in the marketplace," she said.

Wohl also said that the much-rumored next generation of Personal Computers, sometimes called the PC2 line, will not debut until late this year at the earliest. An earlier introduction probably was planned, she said, but the shake-up that sent new management to IBM's Entry Systems Division has caused the delay.

As for whether IBM will introduce a laptop computer, Wohl said IBM is unlikely to do that until that market heats up enough to offer the prospect of a significant return on investment.

There are few laptop machines with a reasonable price, around \$2,500, Wohl said. She added that the most exciting action on the portable market is in the 14-in. to 16-in. transportable market, products such as the Morrow, Inc. Pivo II and the Zenith Data Systems Corp. Z-171, both of which premiered at Comdex/Spring '85.

With such IBM-compatible, battery-operated machines on the market, she predicted, the days of the 28-in. IBM-compatible transportable are numbered.

## We dropped the price of our modems.

The cost of transmitting data just keeps getting lower and lower. Thanks to Datagram. And our line of inexpensive, yet immensely talented modems.

All are totally soft and down-line loadable, have built-in signal quality monitoring, and run on unconditioned voice grade lines. Yes, that's right. Even our 14400 with built-in channel buffered mux which sells for under \$4,500. And you can get it with trellis encoding for just a little more.

Our 9600 point to point modem is a real work horse at only \$1,495. But if you want a 9600 with a four channel buffered mux, we've got that too at only \$1,895.

If your application requires multi point

modems, our 9600 fast poll train in 7 1/2 ms. That's the fastest in the world. And goes for \$2,195.

On top of that, all our modems are preconfigured at the factory, so all you have to do to get them going is connect them to the line.

We have modems or other data communications equipment in your hands in just 72 hours. The phone call is free. So call now, 1-800-235-5030 and order your Datagram modems today.

# Datagram

We make networks work harder.

## MICROCOMPUTERS

Continued from page 95  
soft Corp.'s MS-DOS.

The menu-driven project management software reportedly features critical path scheduling, resources leveling, cost control and report generation and can schedule up to 10,000 applications activities.

The product requires 512K bytes of random-access memory and a hard disk and costs \$2,600.  
Account Data Group, Suite 202,  
2120 Wisconsin Ave. N.W., Washington, D.C. 20007.

PRINTERS/PLOTTERS/  
PERIPHERALS

8 Fujitsu America, Inc. has released its Datamax 34L, an IBM Personal Computer-compatible version of its 34-wire Datamax 34 dot matrix printer.

The Datamax 34L reportedly features bit-mapped graphics and black graphic character sets. Principal graphics modes are an 8-bit, 300 by 60 dot/in. resolution image mode and a 24-bit, 300 by 180 dot/in. resolution image mode. Print speed is 60 char./sec. for letter quality and 240 char./sec. for draft quality.

The printer is priced at \$1,896.  
Fujitsu America, 3045 Orchard Drive, San Jose, Calif. 95134.

8 Intel Manufacturing, Inc. has released its Data Manager multiple device speaker which is said to connect up to five personal computers

with RS-232C interfaces to any printer or with an RS-232C interface.

The Zilog Z80A microprocessor-based Data Manager stores finished copy from five computers for final printout on a first-in, first-out basis at a rate the printer can accept, the vendor said.

The system allows each computer to send data at 9.6K bit/sec. and provides 54K bytes of memory storage to accept data from all five computers. The unit has five RS-232C input ports and one RS-232C output port. The speaker is said to eliminate the need for operator intervention in the printing process.

A single unit costs \$795.  
Intel Manufacturing, 799 Chaucer Ave., San Jose, Calif. 95131.

## BOARD-LEVEL DEVICES

8 ETS Systems, Inc. has announced Atta Byte, an add-on board that reportedly gives AT&T Personal Computer 6800 more memory expansion up to 640K bytes.

The board is said to be available with 128K, 256K or 512K bytes of memory installed to add to the 6800's 256K bytes of memory. The Atta Byte board reportedly occupies one dual connector slot in the 6800. Its price includes Real Corp. PC Accelerator software.

The board costs \$395 for 128K bytes, \$495 for 256K bytes and \$595 for 512K bytes.

ETS Systems, Suite 125, 601 N. Greenville, Richardson, Texas 75081.

## APPLE From page 47

business marketplace.

Unlike the other two products, the Macintosh XL was not new. Apple had simply redesigned the Lim.

Born again, the Lim was destined for the Macintosh Office, Jobs said. It would meet the needs of the corporate user, who required more memory, a larger screen and a built-in hard disk drive.

Less than four months after that annual meeting, however, Apple said it would halt production of the Lim. The machine met its end without fanfare; the Pointer Sisters were nowhere to be heard. And now Apple is suddenly shy about its plans, ducking questions about a replacement.

From the outside, it appears that Apple announced the Macintosh XL as a stopgap measure. Actual support for the machine was minimal, users said.

The move bought some time for Apple, which didn't (and still doesn't) have a powerful Macintosh in its lineup. Its presence served to deflect some questions, at least temporarily, on how Apple would serve the corporate market.

"The only reason Apple kept [the Macintosh XL] as a product was so that if someone said, 'Is there a Macintosh with a hard disk and more memory?' Apple could say, 'There it is—the Macintosh XL,'" according to Bill Parkhurst, an independent software developer in Los Gatos, Calif.

Parkhurst, who heads a Macintosh special interest group for the Software Entrepreneurs' Forum, an

association of independent software companies based in Palo Alto, Calif., said the news didn't surprise most developers. "Most of us recognized quite a long time ago that the chosen product was the Macintosh and that the Lim would be phased out," he explained.

Analysts agreed, attributing the Lim's demise to its troubled tenure in the industry. Its original \$10,000 price tag and its small stable of proprietary software hindered the computer's acceptance, analysts said. Price cuts followed, but the Macintosh gained momentum in the interim.

"To us, the Lim represented the new technology we wanted to bring out in a low-cost personal computer," said Apple software engineer Larry Tesler, who helped design the Lim. "The Macintosh represents what we're trying to do even better than the Lim did."

Apple hopes to win over large corporate users with its Macintosh XL. Its executives have acknowledged that Apple will have to earn its way into the good graces of big businesses over the next two years to be successful.

But the company has not begun on an explicit note. With the rapid rise and fall of the so-called Macintosh XL, the company seems to have substituted a makeshift policy for a clear corporate direction.

Perhaps Apple should review the remarks its president, John Sculley, made at the same annual meeting at which the Macintosh XL was unveiled.

## SERVES TWO

Two available reasons why PCMag provides the best 20% of our readers:

1. It serves two best needs of ours.
2. With our new bi-monthly format including the benefits, group-ups, reviews, how-to's, and more, we've created a new format that's both easy to read and informative, and we've kept it simple, by our editors and our readers.
3. Of course it has the features of the other brands, too.
4. It's the only one you can't live without.

PCMagazine is the only magazine that serves for two in the computer magazine world. You know what to do.

Challenge us to the test.

## IN DEPTH

PHOTO BY AP/WIDEWORLD

## IN DEPTH/STRATEGIC PERSPECTIVE

system opportunities. It holds that the organizational purpose served by computer applications is either to automate a basic process (subprocess or task) or to provide information for decision making.

This view is concerned primarily with information flows, data bases and the production of reports related to the organization's planning and control operations. I call this the conventional perspective on information systems.

A data processing professional exemplified this view in the early '70s when he advocated a new approach for information systems planning, a top-down method "to focus on the critical tasks and decisions made within an organization and to provide the kind of information that the manager needs to perform these tasks and make these decisions."

The author of a recent book on the health care industry reflects this view when he asserts that "the only computer services that a hospital really needs — the basic financial, billing and accounting operations — could be purchased relatively inexpensively from any service company."

When adherents of the conventional perspective search for information system opportunities, they look for two varieties: management information systems (MIS) and management support systems (MSS). (MSS includes as its two main species decision support systems and executive information systems.) These varieties are intended to serve organizational purposes associated with the conventional perspective, that is, automating basic processes (the domain of MIS) and satisfying the in-

formation needs of managers and professionals, needs often closely connected with planning and control decisions (the domain of MSS).

But the conventional perspective, important as it is for identifying and illustrating the significance of these two varieties, offers too limited a view of the world of information systems.

## Clinical laboratory

Consider, for example, how Metpath, Inc. uses systems to compete in the tough, fragmented clinical laboratory industry, where low differentiation of service has led to a lack of customer loyalty and frequent price discounting. Doctors send specimens to the lab for processing and, in return, expect timely, accurate analyses. Metpath enhanced its customer service by installing computer ter-

minals in doctors' offices and linking them to its lab computers. For a small monthly fee, physicians receive test results as soon as they are determined.

From the conventional vantage point, the system might be seen as a transaction processing, on-line data base application providing existing diagnostic information to physicians. But this description captures neither its competitive impact nor its innovative character. By changing conceptual issues and viewing it from a strategic perspective, we see it as an attempt by Metpath to use its information system as a double-edged sword.

First, it builds barriers against new and existing rivals by raising the information systems ante. Second, it enables Metpath to gain an edge over other labs by differentiating an otherwise commodity service. Metpath hoards historical records of patient data on file and offers its customers computerized processing services for billing and automating payable operations, as well as easy access to stock market quotations from the Dow Jones network.

Finally, the system can expand the services it offers into such areas as diagnosis (when expert systems become available) and drug interaction testing. Referring to the latter, the vice-president for scientific affairs of the American Pharmaceutical Association said: "If there is such a thing as the wave of the future, this is it."

Fringed as it is to store patient profile data on such items as drug and food allergies, chronic illnesses and medications taken, the Metpath system will permit physicians to conduct drug interaction tests prior to writing prescriptions. Each of these information system-based heeds serves to differentiate a commodity service and thereby secured the loyalty of the estimated one in five doctors who switch annually from lab to lab in search of lower prices.

## Competitive weapons

The conventional perspective on information systems supplies scant guidance to those who wish to discover such application opportunities or explain their strategic impact. Nor is it of much help in accounting for the extended uses made by American Airlines and United Airlines of their computerized reservation systems, Sabre and Apollo, respectively. Built in the 1970s at a cost of more than \$250 million each, these information systems are no longer employed merely as neutral scheduling mechanisms to automate the test reservation process. Rather, they are being used increasingly as weapons in the struggle for industry domination.

Sabre and Apollo give priority listing to American and United flights when travel agents request information on their computer terminals. An agent who uses the Sabre system and requests a listing of flights from New York to Los Angeles with stops in between knows that the first few items to appear on the screen may not show the most direct way, nor the least expensive way, but will assure they'll show the American way.

American and United have used their reservation systems to preempt the major channels of distribution. In the computerized travel agency market, the two form a powerful duopoly with shares of 41% and 39%,

# THE FLOPPLESS FLOPPY

CONTROL DATA

©1985 Copyright © 1985 Control Data Corporation.

negatively. The crashes (the remaining 20%) have been left to the competition. While Delta, Eastern and TWA have developed smaller systems, the other carriers are at sea. As one of the less fortunate put it: "The carrier didn't pay enough attention, and now it's a direct threat."

More than 50% of the airline's 20,000 travel agents, accounting for 20% of airline ticket sales, are computerized. In regions where the airline with the reservation system has numerous flights, the prioritization procedures can lead to as much as 20% more revenue.

In addition, Sabre and Apollo have become vehicles of diversification and growth, propelling American and United into new lines of business. According to the president of American, "This industry made every cent it can generate. We've got to be creative about using our huge asset base to develop new revenue. We're looking at businesses we can be in at low costs because some of the links are already in place." These links focus, in American's words, "the world's most powerful secondary computer system."

According to the vice-president of marketing and information systems at American, 65,000 devices hang off the network, which runs 23 hours a day, 266 days a year and handles traffic of 6.5 million domestic and international airline combinations, more than 10,000 daily fare changes and the schedules of about 600 airlines around the world. In 1983, for example, it handled more than 55 million calls at its four reservation centers.

To exploit certain capacity on Sabre, the carrier recently formed American Airlines Telemarketing Service, which performs services such as conducting marketing surveys and taking pledges generated by telemarketers. American expects that the fee income from these operations will be supplemented in the future when it uses the network to offer consumer products to home computer users.

#### New variety

The two cases just described are instances of strategic information systems, information systems used to support or shape the competitive strategy of the organization. Strategic information systems represents a new information system variety, radically different in organizational use from those contemplated by the conventional perspective.

The conventional perspective is unsuited for guiding the systematic search for strategic information systems opportunities and is incapable of explaining the strategic significance of information systems. Believers in the conventional gospel on information systems are unable to discern most strategic information systems opportunities. Lying still further beyond the conventional field of vision, the entire spectrum of strategic alliances supported or shaped by information systems also goes unnoticed.

Paine Webber, for instance, seized on alliance opportunity in 1984 that no other brokerage house had previously been able to capture. It negotiated a joint with the Bache Street Bank and Trust Co. of Boston enabling it to participate in MasterCard, the nationwide automated teller network run for banks by MasterCard International, a credit card and

traveler's check organization owned by 24,000 banks and other institutions. The MasterCard network lets cardholders withdraw cash from more than 1,600 automated teller machines throughout the U.S.

Up to this time, banks had been very careful to exclude rivals offering competitive financial services from entry to their network. Indeed, two of the largest bank-owned nationwide networks, the Fina and Citrus systems, rejected requests

from Merrill Lynch and the Fidelity Group, a Boston-based mutual fund company to establish similar arrangements.

New Paine Webber customers can use credit cards issued by Bache Street to get the same 24-hour access to cash that bank cardholders enjoy. Because of this alliance, a cardholder with a Paine Webber account can withdraw money at automatic teller machines across the country. The story of how Paine Webber will use

this new alliance in packaging its products has yet to unfold. In any case, the deal illustrates how the broker capitalized on information systems assets developed by others to serve its own strategic ends.

#### Joint ventures

Another form of strategic alliance involving information systems is illustrated by a recent joint venture. IBM and Merrill Lynch announced in 1984 the formation of Information Markets, a new information service intended to provide users of IBM Personal Computers with stock quotations, investment data, analytical processing, financial software and so on. The service will enable end users to communicate via satellite links with Merrill Lynch's host computers. Marshall Weber Corp., a software house specializing in the securities

## FREEDOM of INFORMATION

### CPT Translates Office Automation into True Information Management.

From powerful, structured capabilities in sophisticated communications networks, CPT allows even the office automation. We offer true information management. We give you freedom of information through systems of flexible and accessible hardware, plus a wide variety of fully integrated software. All at affordable prices, and all backed by worldwide support and service. Reproducible, Upgradable Systems You can begin with a straightforward CPT Floorplan™ workstation; then, gradually and economically upgrade to a complete information management system.

You can integrate word, text and graphics processing; localized data storage and shared resources; electronic mail; electronic collections and more. You can choose from a variety of quality printers including a high speed laser quality laser printer.

Your CPT information management system also includes valuable communication information to personal resources, enhance cooperation, outside databases and other information resources.

Most important, you can meet each new requirement without costly conversion or major system buying.

A Planner — and IBM Award CPT pioneered office automation. Now we're the leader in providing true information management. Find out how CPT gives you freedom of information. For your nearest CPT dealer call 800-477-4796 ask for CPT.

**MORE THAN OFFICE AUTOMATION... IT'S INFORMATION MANAGEMENT.**

## IN DEPTH/STRATEGIC PERSPECTIVE

industry and acquired by McGraw-Hill, Inc. after International Market-out opened its doors, won the contract to develop the systems that will run the service.

International Market-out is a 50-50 joint venture of IBM and Merrill Lynch. The venture's customers will be drawn from Merrill's 10,000 account representatives, other brokerage houses, commercial banks, insurance managers and clients of these firms. For IBM, the alliance supports its strategy of market expansion; for Merrill, the venture supports plans to diversify into the information services industry and to reduce and eventually eliminate the loss it now pays to Quantum Systems, Inc. for the use of its stock-quotation system.

These alliances, as well as the examples detailed earlier, exemplify the strategic use of information systems. Representing instances in which competitive strategy is supported or shaped by the application of computer technology, they mark a dramatic turning in the brief evolutionary history of information systems. But to appreciate more deeply this break with the past — this movement from the conventional to the strategic — requires examining more than the twisting out of strategic information systems cases. What we need to show are examples of firms that have developed a vision of information systems to guide their strategic course.

#### Strategic vision

To see that an information system application is a strategic information system, we need to understand how information systems are used to support or shape the firm's competitive strategy. This ability to see and understand I call strategic information systems vision.

A firm with a powerful strategic information systems vision meticulously encourages the search for opportunities to use information systems to gain a competitive edge. And when they are discovered, it marshals the proper resources to support them. In some cases, strategic information systems vision develops into an image of the future that top management uses to navigate the firm's strategic path.

How can we determine whether a firm possesses this vision? The best test is to examine what the firm says and does. If it purports to appreciate the strategic significance of information systems and if it launches thrusts supported or shaped by systems, we are justified in believing that strategic information systems vision is operating.

It would be preferable, to be sure, to explore from within, to observe in detail the strategic decision-making processes and how information systems are woven into the fabric of strategic programs, before making a judgment.

#### Dun & Bradstreet

The Dun & Bradstreet Corp. traces its origins back to 1841 when Louis Tappan, a New York dry-goods jobber, founded the Mercantile Agency, the first credit-reporting firm in the U.S. Within a decade, the Bradstreet Agency became the second company to enter the field. By 1860, Mercantile (now run by E.G. Dun) had established 60 branch offices in major business centers.

Being the first two firms to create nationwide networks, Bradstreet

and Dun dominated the credit-reporting business. In the 1870s, Dun employed more than 10,000 reporters or investigators and received some 5,000 requests a day for information. In 1890, the two firms merged to form Dun & Bradstreet.

By 1979, Dun & Bradstreet had become a \$763 million diversified information services company with four major divisions: Business Information Services, Publishing, Marketing Services and Broadcasting. Business Information Services contributed 50% of the revenues and 27% of the operating income.

In 1979, Dun & Bradstreet received its best year ever and made two significant strategic moves. It purchased for \$164 million National CBS, Inc. (NCBS), a leading computer service company with a nationwide, 80,000-mile time-sharing network,

and agreed to acquire its sixth television station together with half-a-dozen small cable systems. This move gave Dun & Bradstreet its first hands-on experience in the growing cable industry. The NCBS acquisition became part of Dun & Bradstreet's Business Information Services Division, while the television stations and cable systems were to become part of the broadcasting group.

In its annual report, Dun & Bradstreet explained how it saw these moves as consistent with its strategic vision: "There are three principal resources that are central to the continued success of the Dun & Bradstreet Corporation: our ability to collect timely and relevant information for the decision-making use of our various customer groups; our capacity for applying technology effectively to maintain information delivery

and utility; and the management to anticipate the needs of our customers and, in partnership with our highly skilled people, to provide quality products and services worldwide."

#### Information services giant

At the close of 1983, Dun & Bradstreet had income a \$1.8 billion information services giant. The contribution of the Business Information Services Division had risen in four years to 46% of total revenues and 54% of operating income. During the year, Dun & Bradstreet made two significant strategic moves. It acquired McGraw-Hill & Dodge Corp. (M&D), a major software company specializing in financial and human resources packages, and departed from the broadcasting industry by selling its stations and systems.

# If we said we have display stations, print flexible disks and

# would you think we're

**Good** That's exactly what we are prepared to do. Because not only can we promise a complete line of products designed to meet your performance and price needs, we can deliver it. Today.

We can meet your performance needs with tape drives that are setting industry standards for high reliability subsystems. With communications channels that offer the broadest choice of economically designed, easy to own PCM products.

77

**The Official Airline Guide/Electronic Edition is an example of an innovative strategic maneuver targeted at customers who wish to reduce their travel costs — the third fastest rising corporate expense.**

In 1984, Dun & Bradstreet understood its focus on business services and information by acquiring, through merger (a \$1.25 billion stock transaction), A.C. Nielsen Co., the nation's leading consumer research company.

Dun & Bradstreet's recent evolutionary history reflects strategic information systems vision. Its management has executed strategic moves supported or shaped by information systems, moves that serve to support or shape the company's long-term objective of concentrating its efforts and resources in the business services and information industry.

In 1978, Robert Weinstein (Dun & Bradstreet's president when it was acquired by Dun & Bradstreet and now Dun & Bradstreet's president and chief operating officer) proclaimed: "NCBS

and Dun & Bradstreet are the best fit in the information industry — data from Dun & Bradstreet operating companies plus NCBS leadership in computer services. We're going to rewrite the book on combining information and technology to develop new products for our customers.

The battle cry echoed by Weinstein is reflected in the following moves made during the 1978-1984

time period.

**Acquisition of NCBS.** This major diversification move enabled Dun & Bradstreet to enter the time-sharing business, a new market pioneered by NCBS, and to exploit NCBS's information system resources (its hardware, software and highly skilled work force) synergistically.

Within a few months after the acquisition, 13 joint projects were

initiated, among them Data Vist, a new credit product, and Moody's Statistical Credit Report Service, both designed for distribution and delivery over the NCBS network. But the NCBS time-sharing business has been a disappointment.

As a result of declined over the past five years, primarily because of the rapid spread of microcomputer processing, Dun & Bradstreet has had to find new uses for its valuable NCBS resources.

**Acquisition of MacCompass & Dodge.** Like the NCBS purchase, this alliance illustrates a major diversification move with a dual purpose. Dun & Bradstreet expects to exploit M&D's software, systems know-how and 3,000-member customer base synergistically across its various product lines. And it expects M&D, an established leader in its market niche, to continue its impressive growth.

Already, joint projects are emerging between M&D and Dun & Bradstreet's other units. M&D's PC-Link allows users of IBM's Personal Computer to retrieve and transfer information data. This product fits directly to Dunquest, which is the result of efforts by an NCBS division (now called Dun & Bradstreet Computing Services) and a strategic information systems alliance struck between Dun & Bradstreet and IBM.

**Acquisition of Nielsen.** In the case of the NCBS and M&D acquisitions, Dun & Bradstreet exploited the information systems assets of others. With the Nielsen merger, on the other hand, Dun & Bradstreet saw opportunities to exploit its own information system assets. Here, there are both economy-of-scale (possible consolidation of information system services) and economy-of-scope opportunities, which have yet to unfold.

**Development of Official Airline Guide/Electronic Edition.** Dun & Bradstreet's Official Airline Guides provide information on North American, Worldwide and Air Cargo flights. In 1983, Dun & Bradstreet announced an electronic version of these guides. The Official Airline Guide/Electronic Edition can be accessed by computer terminals. It lists the information contained in the print editions, as well as fares. Users can query the flight data base for comparative fare information within specified arrival or departure periods and for lowest fares between two points.

The Official Airline Guide/Electronic Edition, however, does not handle reservations. Dun & Bradstreet distributes its product directly or through such information networks as Compuserve, Inc., Dialcom, Inc., Dow Jones News/Retrieval, Bell Canada and Veridata.

The Official Airline Guide/Electronic Edition is an example of an innovative strategic maneuver targeted at customers who wish to reduce their travel costs — the third fastest rising corporate expense. In the past, travelers generally relied on agents for such information and, depending on the reservation system used by the agent, received flight information giving priority to the airline providing the system. Now, with the Official Airline Guide/Electronic Edition, travelers can get objective data, knowing only the airlines with the lowest prices. The system will also include international fares, as well as hotel and car rental rates.

# disk and tape drives, ers, computer tapes, other accessories,

# handing you a line?

And with high performance disk drives whose greater flexibility in features are now being acknowledged in the newest offerings of the "Industry Leader."

We can meet your price needs through the Memorex Finance Corporation, which offers you total financing flexibility. From quantity purchase programs to competitive leasing plans, we can suit your company's budget and schedule demands.

So whether you're looking for disk or tape

subsystems, printers, display terminals and controllers, or computer media, you can have it all. And you can have it all now.

You see, only Memorex can hand you this line. A complete one.

The alternative.  
When it matters, make it Memorex.

# How to advertise in every major computer market in the world as easily as you advertise in the U.S.

CW INTERNATIONAL Marketing Services will help you penetrate the most profitable computer markets worldwide—easily, effectively, and economically.

Your ads will receive the attention they deserve. Our network of more than 56 computer publications in 25 countries is the largest in existence. Over 8,000,000 computer-involved people read our publications every month.

With more than 10 years' experience in international marketing, we're the only service of our kind. We can help you make your ads more effective. Our head office can translate your ads for a 5% surcharge on the space you purchase.

We'll help you maximize your market penetration. Because we place your advertising through our U.S. office, you won't have to pay the MPE (value added tax, ranging from 5-30% of your ad-space purchased) which is regularly charged on all advertising placed abroad. And you'll be able to advertise in even more markets while you take advantage of our corporate discounts.

We're also available to advise you on your campaign strategy—such as when to advertise in order to coincide with special-focus issues and trade shows.

All you need to do is send us your advertising materials. We'll handle all the transactions. And we'll bill you in U.S. dollars so you won't have to worry about exchange rates.

Call Diana La Morte today if you want to reach the computer buyers in any of the following countries: Argentina, Australia, Brazil, Canada, Chile, Denmark, Finland, France, Greece, India, Israel, Italy, Japan, Korea, Mexico, Norway, People's Republic of China, Saudi Arabia, South Africa, Southeast Asia, Spain, Sweden, The Netherlands, United Kingdom, Venezuela and West Germany.

You can reach her toll-free at (800) 343-6474 in Massachusetts call (617) 678-0700. Or you can reach her through Telex, at number 95-1263. OK if you prefer, fill out the coupon below and return it today. Do it now. The sooner we hear from you, the sooner you'll hear from our readers.

## IN BRIEF/STRATEGIC PERSPECTIVE

**Creation of Dunsmuir.** By forming strategic information systems alliances with IBM, Lotus Development Corp., and Brevard Systems, Don & Bradstreet created a unique product complementing the other offerings as well as providing a stand-alone, integrated professional workstation.

Dunsmuir consists of an IBM Personal Computer (Don & Bradstreet forged an agreement with IBM to act as a value-added reseller), spreadsheet (1-2-3) and word processing (Wordstar) International Corp.'s Multimate) programs and specifically developed Don & Bradstreet software (from MCB) utilizing and users with electronic mail, file maintenance, data integration and other capabilities.

As incentives to purchase Dunsmuir, Don & Bradstreet includes an standard feature one year's sign-up

charges for Western Union's electronic mail service and its own QIP and Airline Guide/Whitehouse editions. Access to Don & Bradstreet's extensive collection of electronic databases, and others as well, is a relatively straightforward service with Dunsmuir.

Built into the offering is PC-Link, MCB's value-to-addition utility program, which allows Personal Computer users to transmit and receive data from corporate data bases. While the Don & Bradstreet offer its customers value-added networking services and distributed processing through the use of such microcomputer systems as Dunsmuir, MCB and other Don & Bradstreet units can also enjoy use of the network.

Development of Dunsmuir. This recent Don & Bradstreet offering is a patchwork of telecommunications network, similar in function to GTS's Talent and Tymshare, Inc.'s Tymnet. With Dunsmuir, Don & Bradstreet offers its customers value-added networking services and distributed processing through the use of such microcomputer systems as Dunsmuir, MCB and other Don & Bradstreet units can also enjoy use of the network.

Dunsmuir enables all Don & Bradstreet users to access its data bases using one standard program. It reduces Don & Bradstreet's general revenues for Talent and Tymnet. Dunsmuir represents a strategic growth move for Don & Bradstreet, a kind of forward integration that takes the company a step further toward its goal of being a full-service provider of information services and data to its clients.

### Forward look

From this short selection of strategic actions taken over a five-year period, it seems evident that Don & Bradstreet's corporate information systems vision is clear. If it didn't, how else can one account for such efforts to use information systems to support strategy. The reader may object that because Don & Bradstreet is an information services company, such of the moves cited is natural and has nothing to do with strategic information system vision.

But this objection is not persuasive. Don & Bradstreet had choices. It wasn't forced to acquire MCB or Multimate. It wasn't lured into forming an alliance with IBM to market the Personal Computer and build a product around it. Dunsmuir was not inevitable. Different data-rich firms have made different strategic choices. Some emphasize information systems, others not. Don & Bradstreet itself didn't have such a clear vision of its future in 1979, so indicated by its longstanding acquisition. After acquiring MCB, however, the die seems to have been cast, with Walman probably sealing the diecast roll.

The current evolution of Don & Bradstreet, inspired by strategic information systems vision, is far from complete. By the end of this decade, in all likelihood, it should emerge as one of the leading information services firms in the world, providing a full line of products supported or changed by information systems.

### McKesson Corp.

Another example of a firm that has developed a powerful strategic information systems vision is the McKesson Corp. Recently Furman-McKesson distributedly McKesson-Hobbs, in 1984, was the nation's largest independent distributor of

## IN DEPTH/STRATEGIC PERSPECTIVE

79

*These strategic moves run the gamut from those designed to exploit scale and scope economies, to growth and alliance maneuvers to expand into new markets.*

ethical and proprietary drugs, toiletries, fragrances and cosmetics, wine and spirits; and industrial and specialty chemicals.

Instructured in the late 1960s, McKesson diversified over the next 50 years into such businesses as alcoholic beverage distribution, dairy products (through a merger with Parmalat Dairies) and pasta and dehydrated vegetable manufacture (through the acquisition of C.F. Mueller Co.). In 1984, the new McKesson announced that it was leaving the food business (Owring said Parmalat and Mueller in 1985) to concentrate its resources on the value-added distribution of a variety of products.

What is shaping McKesson's new strategic direction is what is shaping Dan & Bradstreet's: strategic information systems vision. Top manage-

ment believes that the name "McKesson Corporation" now "reflects our history, the present structure of our business and the path we are traveling."

Thomas Drohan, McKesson's former president, said in the 1983 annual report: "Perhaps the single greatest advantage that the McKesson distribution computer entry has been — and will continue to be — in computer technology, where our size and diversity have enabled us to

achieve the necessary critical mass. Our data processing resources now involve 550 people and an annual budget of more than \$40 million. We intend to continue the proliferation of this technology among our current distribution businesses and to seek out opportunities to apply it to other distribution-related businesses. This shift in emphasis — making value-added distribution our primary thrust with a secondary thrust in certain proprietary product areas —

reflects the facts as they are today."

McKesson sees a direct connection between its ability to gain competitive advantage and its use of information systems to support and shape strategies aimed at this objective. Over the past 10 years, the company has introduced computer-based goods and services to help it gain an edge with both its suppliers and its customers, an edge that translates into a distinct advantage over other distributors. Those strategic moves run the gamut from those designed to exploit scale and scope economies, to growth and alliance maneuvers to expand into new markets. Among the alliances implemented by McKesson, the following are noteworthy.

**Cosmic/Keenecore.** Cosmic, a computer-based merchandising program created in 1981 for drugstores, supermarkets and mass merchandisers, helps retailers stock, price-label, rotate and display merchandise according to the marketing reports it generates. Covering 30 departments in 1987, it now extends to 38 categories, such as over-the-counter drugs, pet care and school supplies.

**Econoscan.** A computerized order-entry system, enables a retailer holding an Econoscan scanning device to record data from shelf labels and then transmit the captured data in the form of an order over telephone lines to a McKesson distribution center, at the rate of 600 lines per minute. McKesson fills the order overnight and delivers it the next day in tote boxes arranged to correspond to the various shelf divisions of the retailer's store.

**McKesson Chemical.** This division, the nation's leading full-line distributor of industrial chemicals, implemented a computer-based service for its customers that serves them costly inspection time and enhances McKesson's image as a high-quality, reliable distributor. At selected chemical distribution centers, McKesson installed highly sensitive instruments to analyze the chemical composition of substances. This ensures, for example, that chemical solvents meet stringent customer standards. The instruments are tied via telephone lines to a McKesson computer at its research center in Dublin, Calif., so that the data can be interpreted and checked for compliance.

This is another of the many differentiation-based strategic thrusts supported by McKesson's information systems. McKesson Chemical, like the drug and alcoholic beverage divisions, also offers its customers an on-line order-entry system designed to streamline ordering, inventory control, purchasing, accounts receivable, delivery and invoicing procedures. For the chemical division, it provides instantaneous information on inventory, customer needs and the safe handling of the more than 1,000 chemical products it sells. Most likely, economies of scope based on order-entry systems know-how are at work here.

**Pharmaceutical Card Systems.** PCS, a prescription drug claims processing system, led McKesson to spin off a special business unit to exploit its potential. Introduced a few years ago, PCS now processes more than \$7 million claims from 2.5 million cardholders covering 6.5 million people. Employers issue PCS cards as an employee benefit.

More than 45,000 pharmacies, representing more than 80% of the

## MAN SAVED FROM A SEA OF PAPER

These oceans of information can be standardized into computer output microfilm (COM) that takes up less than 1% of equivalent paper space.

And it's simply the most cost-effective storage/reproduction medium available.

For example, a 1,000-page report using old reproduction methods would cost \$20.00 and take 1 hour to reproduce. An NCR COM can perform the equivalent task in 15 minutes for \$1.25!

NCR's COM systems can be a real life saver.

Computer Output Microfilm

# Many Software Companies Claim To Have Set Standards. Only One Has Actually Set Them Down On Paper.

*"Every industry starts at a stage of 'every man for himself,' and some industries never outgrow it. In the applications software business it has become obvious that a criteria of excellence is needed. Such standards will be the way by which customers and users will be able to compare products. It will give us all an idea of what application software should be."*

The words above are taken from a 35-page white paper written by Software International, the company whose first general ledger package actually started the applications software industry 15 years ago.

Entitled, "Setting Standards In Mainframe Applications Software," this report may be the first of its kind—the first ever to set down on paper the standards appropriate for application software products.

In it are ten guidelines suggested as standards in the design of applications software as well as standards which cover product installation, customer service and support. In short, standards for how a professional software vendor should build its products and how it should treat its customers.

We think you will find it a concise, common-sense collection of ideas—particularly vital to you if you are evaluating software packages or developing your own.

It's yours for the asking.

## YOUR IBM 3270 AND YOUR IBM PC NOW HAVE SOMETHING IN COMMON BESIDES THEIR PARENTS.

### THEIR PRINTER.

It's one thing for a high speed dot matrix printer to be plug-compatible with the IBM 3270 system.

It's quite another for the same printer to work in the ASCII universe where IBM's PC communicates.

But the Datamath CX 3180 is quite another kind of printer.

First, the CX 3180 does more for less. Because while the 80 cps version of the IBM 3287 costs \$4600, and the 120 cps version costs \$5000, the CX 3180 cruises at 180 cps and costs only \$3195.

Second, the CX 3180 is truly plug-compatible, with a cost interface for the 3270 world and a parallel interface for the PC world. With no black box and no extra cables.

The CX 3180 even features dual legends on its sophisticated front panel controls. One set emulates the IBM 3287 and the other works for your PC—or for any other ASCII computer. And the parameters are switch-selectable.

The CX 3180 is also a printer in the Datamath high performance tradition. Which means it's one of the most rugged and sophisticated printers ever made.

So if you want the best of both worlds, get the one printer that does it all: the Datamath CX 3180.

For more information about the CX 3180 and the whole family of high performance Datamath printers, call toll-free.

## IN DEPTH/STRATEGIC PERSPECTIVE

77

*Whatever Action's motives, McKesson's aim was clear: to expand the scope of its distribution business and transform the cottage industry of software distribution (with after-tax margins of 4% at most) into a larger, more profitable game.*

nation's retail drugstore, RE prescriptions for PCB cosiders. Coverage is offered by 165 insurance companies in the U.S. and Canada. Data from pharmacists is transmitted to a central McKesson computer for processing. Claims are completed automatically, and losses are forwarded to third-party reinsurers. In itself, PCB represents a strate-

gic diversification maneuver. Perhaps even more interesting is the continued expansion of McKesson's PCB operation, symbolizing the power of the company's strategic information systems vision. As claim data is collected by PCB, a special unit, Pharmaceutical Data Services (PDS), uses its software to analyze the data and produce a series of marketing reports targeted at major drug manufacturers, financial institutions and government agencies. The reports include analyses of prescription drug use by hospital, nursing care facility and so on. It is capable of analyzing the flow of pharmaceutical products through the health care system.

In 1980, PCB acquired Draughn/Davis Organization, a medical research company that collects data on drugs prescribed by physicians. This, of course, will become part of PCB's growing data base and move the unit closer to its goal.

Acquisition of BECU. In 1980, McKesson leased Action Industries Inc., a Pittsburgh maker of household and hardware items, in a 50-50 venture in which they acquired BECU, Inc., a microcomputer software distributor. The leader in the college micro software industry at the time was Softart Computer Products, followed by Micro D and BECU. The market for personal computer software, then at \$2.1 billion, was projected to reach \$11.7 billion by 1985, with 25% handled by independent distributors.

Whatever Action's motives, McKesson's aim was clear: to expand the scope of its distribution business and transform the cottage industry of software distribution (with after-tax margins of 4% at most) into a larger, more profitable game. McKesson planned to use previously developed information systems as the synergistic fuel for its entry vehicle. The computerized order-entry systems and other proprietary products it provides to serve them 14,000 mass merchandisers, supermarkets and other outlets, would be tailored to this new marketplace. These information systems would not be used merely as aids to improve efficiency but as weapons to shape competitive strategy.

"The name of the game," McKesson's chief executive officer said at the time, "has become adding value to distribution. Our primary goal is to set ourselves apart from the competition in dramatic enough ways that we become the first distributor a supplier thinks of. At the other end, by tying your customers to you as tightly as possible, you get more and more of their business as they grow."

With the post as privilege to the future, current and new participants in the software distribution industry could expect McKesson to use its information systems to gain competitive advantage by:

- Establishing on-line links with software suppliers and retailers.

## IN BRIEF/STRATEGIC PERSPECTIVE

• **Providing information to suppliers and retailers to help them better manage to inventory, collect and analyze market data and plan sales campaigns.**

• **Providing retailers with shelf management plans, price labels, inventory systems and so on.**

• **Conducting computer-related technical seminars for suppliers and retailers.**

• **Working with software companies to develop new products.**

• **Marketing associated services through its network.** Underestimating for McKesson and Action, however, this strategic alliance failed. In August 1994, the partners announced they were writing off their combined investment of \$5 million and discontinuing the operations of SKU.

A spokesman for McKesson said that "the market for computer software hasn't developed as we had anticipated." The parties were unable to meet accounting losses at SKU.

#### Considerable risks

I include this example of a failed strategic threat to emphasize the point that strategic moves entail considerable risks, and neither information systems support nor shopping nor anything else can guarantee success. What looked like a promising move failed because market demand was misread.

While this venture failed, another seems headed for success. In 1988, McKesson purchased 3 P.M., a software developer and marketer of packages for pharmacies and florists. In 1994, McKesson negotiated a pact with the Florists' Transworld Delivery Association.

Under the terms of the agreement, McKesson will deliver, install and maintain personal computers and systems intended to handle a florist's business management functions such as payroll and accounts receivable and payable. It expects sales from this new venture to total about \$75 million over the next five-year period.

#### Banc One

The final example of a successfully developed strategic information systems vision involves one of the most innovative and entrepreneurial firms in the financial services industry, Banc One of Columbus, Ohio. John G. McCoy, the chief executive officer of this multibank-holding company formed in 1967, retired in 1994 at age 71 after 26 years in that position. When he took the reins at City National Bank (Banc One's forerunner) from his father in 1966, the bank had less than \$100 million in assets and primarily business customers.

With assets of more than \$7 billion and customers

drawn primarily from the consumer sector, Banc One ranked in 1994 in the top 10 among the 100 largest banks in the U.S. as three consecutive shareholders' measures of superior performance.

Though an ongoing series of mergers, it now controls 53 affiliate banks in Ohio. For the 19th consecutive year, net income and earnings per share increased. In the 1989-1990 period, net income skyrocketed from \$22.9 million to \$69.3 mil-

lion, employees from 5,105 to 6,999 and branch offices from 187 to 214.

What factors represent an extraordinary record of profitability and growth? How can it be explained? Why has Banc One, a relatively small, local bank in 1967, been able to succeed in the increasingly competitive national services industry, where the competition includes not only the leading national CityBank, Chase Manhattan and Chemical

Bank but also of retail giants like Sears Roebuck & Co. and financial superpowers like American Express?

While a number of explanations — ranging from luck to charisma — have been suggested, the most convincing account of Banc One's success can be given in terms of the powerful strategic information systems vision — a vision embodied, to be sure, in McCoy, but a vision nevertheless of the integral role to be played by information

systems in the bank's strategic evolution.

McCoy, the son of his colleagues, long believed that banks competed at a disadvantage vis-à-vis such entities as Sears or American Express. While the latter were free to develop an almost unlimited product portfolio or expand without geographical limit, banks were handicapped in these two strategic areas by federal and state regulations. Indeed banks could find ways

## Do you know who's accessing your CICS system?

ALERTACS™ customers can rest easy. They know that ALERTACS is not only easy to use, but is also a comprehensive CICS security system.

With ALERTACS each authorized user is only permitted to access the transactions, programs, files, and fields within scope that were defined for that user. Terminal security is also

available for each of these access levels.

ALERTACS customers also love its modular design. They can turn on as much or as little security as they want. This makes it easy for them to "phase in" ALERTACS's security.

But what really makes ALERTACS great is that it's completely man-

driven. ALERTACS customers do not have to learn a rules language. They simply fill in the blanks of the security screens.

So if you're uncertain about the security of your CICS system, call us today at 800-868-8881 to find out more about ALERTACS. And start resting easy!

## IN DEPTH/STRATEGIC PERSPECTIVE

around the regulations or get them changed in their favor, they found the growing prospect of erosion in some of their major business lines.

McGey's strategic response to these threats was twofold. First, to overcome the geographical expansion constraint, he formed the Banc One building company, which purchased the acquisition of other banks but not across state lines.

Second, to overcome the product development restric-

tion, he encouraged his managers to search for new products that would yield new sources of income and would protect the bank's cash flow stream from exposure to interest rate fluctuations.

Then, expansion through acquisition and product innovation were two strategic thrusts that Banc One would follow in its strategic journey. Both, it turned out, gave precisely the kinds of movements that could be supported or shaped by in-

formation systems.

McGey developed his strategic information system vision early. When he assumed the presidency, one of his first moves was to seek board approval for an annual research and development budget, not to exceed 5% of annual profits. He was approved, and every year, Banc One has been able to implement, primarily in the area of information systems.

In 1986, for example, it introduced the first bank

Automated credit card service outside California. In 1987, it initiated a major-value credit card processing network that today spans more than 20 states. In 1971, it joined with IBM in making the first significant test of point-of-sale systems using magnetically encoded cards. In 1986, with others, it conducted the first test of in-home banking through the use of customer televisions and the telephone system.

From the 1960s, McGey

realized the importance of information systems in the financial services industry. In a recent annual report, he explained why Banc One was so eager to implement the first Bank of America's Internet card which made him think it was such a good idea: "Well, there was some talk involved, but you have to remember that the time when this computer was first beginning to produce important changes in banking. We thought the credit card was an idea whose time had come because of the new computer capability."

The first on-line computer system in banking was designed for credit card authorization. We had one of the first ones here in Columbus. We examined major efforts to computer development in these early years, and we still do today. I might add. By 1970, to tell you how this revolution happens, we began to launch the first automatic teller machine equipment in our Upper Arlington branch because we saw it as a way to reach the customer, with a plastic card, directly to the computer."

#### Processing Services

As Banc One's reputation for information system innovation grew, other firms approached it for processing services. In the late 1970s, Merrill Lynch contracted with Banc One for data processing and Visa debit card transaction services associated with its new credit development account (CMA) service. As a result of this alliance, new also negotiated with other investment banks. Banc One is one of the nation's three largest Visa processors.

The primary vehicle to expand Banc One's processing services — related chiefly to credit and debit card processing outside Ohio banking markets and providing more than 30% of the corporation's net income — is the Financial Card Services Division. This spin-off has had an impressive growth record.

In 1988, the credit-card account base processed by Financial Card Services grew by 41.5% to more than 3.9 million. Of these accounts, 14% are Banc One affiliate banks' customers and 7% are Banc One customers originating from outside our market area, while 79% are derived from third-party processing for other banks, thrifts, credit unions, finance companies and brokers. Financial Card Services revenue grew 36% in 1988.

Late in 1989, a new four-year contract was negotiated with Merrill Lynch related to Banc One's processing of the CMA brokerage accounts. This is the third contract Banc One has had with Merrill Lynch since 1977, when Banc One was selected to be

# Looking for IMS Productivity Tools?

## Take a close look at AFS/IMS...

AFS/IMS is the application productivity system that for the first time, offers a strategic solution for IMS DB/DC and CICS/DI3 users.

With AFS/IMS, you won't have to settle for a development tool that meets just a few of your productivity requirements. AFS/IMS incorporates screen and application "painting," prototyping capabilities, and procedural and macro language support into a single, integrated architecture. With AFS/IMS, your development staff can design, prototype and implement batch and online applications in a fraction of the traditional time and cost — without sacrificing performance or functionality.

And AFS/IMS won't force your development staff to learn a new language or adopt a new design methodology. AFS/IMS is fully compatible with your existing source-level interfaces and generates native-level COBOL source code, without adding any run-time overhead.

...via the "FAST TRACK" Evaluation  
Your time is important. That's why SAGE has developed an evaluation pro-

cess that's quick and thorough. In 1-1/2 days, our "FAST TRACK" will give

cal overview of the AFS/IMS product plus a "hands-on" workshop session. You'll meet with our technical support staff, product development managers and corporate executives to gain the complete product knowledge you need to make an informed decision.

So if timing is critical, schedule a "FAST TRACK" session. Just call 800-638-8703 and ask to speak to a "FAST TRACK" Representative.

YES, I am interested in AFS/IMS.  
Efficiency is critical. Tell me about FAST TRACK.  
I'd like to have a representative contact me.  
I'd like to see the information.

## IN DEPTH/STRATEGIC PERSPECTIVE

the precursor for this revolutionary financial product.

While credit and debit card processing is important to Banc One's overall strategic scheme, it is the centralization of bank processing activities that has enabled the company to make its acquisition program work.

A small bank can be the Banc One affiliate (read: acquisition) proposition, offering opportunity to cope with the accelerating changes in financial services that would

otherwise engulf it — new regulations, the prospect of interstate banking, interest-rate deregulation and perhaps most critical, new technology demands induced by the convergence of information processing and telecommunications.

For Banc One, its acquisition program — called the "Uncanny Partnership" because it allows the acquired bank a reasonable degree of independence — enables it to reap large

economies of scale. Listen to McCoy on this partnership, taken from the 1983 annual report: "More recently, the Uncanny Partnership represents our chosen way of managing the holding company even though we could merge everything into a single bank. Instead, each bank is run by bankers from that area, each trying to be sensitive to community needs. As a result, a lot of our management strength and, certainly, the growth

and earnings potential, lies with our affiliates. We have limited the concentration of management in those areas that are most sensitive to economies of scale, such as data processing or the handling of investments. I expect this philosophy will remain for some time into the future."

Then, Banc One sees the strategic cost threat to shape its competitive strategy of growth via acquisition. In the case of a recent affil-

iation, according to another officer of Banc One, "We were able to save about a million dollars a year in combined operating expenses by converting the affiliate's data processing systems into our data system. There are some real economies of scale at work here."

#### Strategic alliances

Banc One also forged an innovative strategic alliance with Comp-U-Card, a computerized shopping and below-cost buying service. The two partners created Super Visa, a credit card issued by Banc One that Comp-U-Card offered up bids to have new customers.

This strategic information systems alliance serves Comp-U-Card's purpose of enhancing its offering to customers and forwarding the risk and expense associated with starting its own credit card system.

For Banc One, the alliance has already increased the bank's credit card account base by 100%. This has proved to be particularly profitable, because Comp-U-Card's customers have tended to let their accounts fall over to a greater extent than Banc One's other cardholders.

#### Creative force

For Don A. Bradstreet, McKenna, and Banc One, strategic information systems violent functions as a creative force transforming the organization through strategic moves supported or shaped by information systems. Other organizations, such as Citicorp, Federal Express, McDonnell Douglas Corp., American Hospital Supply Corp., and General Electric Co., also possess strategic vision. In its fashion, the strategic importance of information systems.

Strategic information systems vision is an ability that can be developed, and hence possessed, in varying degrees. Its most important prerequisite is the adoption of the strategic perspective on information systems.

Without this perspective, the systematic search and exploitation of strategic information systems opportunities would be doomed.

The conventional perspective encompasses the existence of only two information systems varieties: MIS and management support systems. Companies holding this conventional perspective lack the vision to see the convergence of strategic information systems opportunities falling further beyond their line of sight.

But by adopting the strategic perspective on information systems, by formulating a new paradigm of conceptual glasses, the world of strategic information systems opportunities appears.

## Databit Packet Networks...

## The BOCs' Choice for Data Communications

Now, more and more Bell Operating Companies are making Databit their dependable source for today's advanced packet-switching networks. A member of the Siemens family, Databit is part of one of the world's largest electronics companies. Joined with Siemens, Databit offers the BOCs solutions to the complexities of today's data communications networks.

Siemens-Databit packet networks provide the BOCs with complete network management, cost-effective network topology, high throughput, and multiple protocol support, plus the ability to grow and adapt their customers' changing needs.

Our packet-switching systems are field-proven, with X.75 connections to over 30 data networks worldwide. And in the U.S., more BOCs have chosen Siemens-Databit packet networks than all our major competitors combined.

#### Packet Switching, Advanced Network Processes, Data-Voice Multiplexers, and Modems

The network backbone is the EDKP, a powerful and flexible X.25/X.75 switch for public or internal data networks. With its state-of-the-art Network Nodes and Network Management Center, the EDKP offers redundant, hot-standby operation; multiple call and data priorities; and billing (including AAA) billing.

The access layer of the EDKP network, our Advanced Network Processor (ANP), supplies the power, versatility, and cost-effectiveness needed for X.25/X.75 packet network access. The modular and expandable ANP handles up to 128 subscribers, and it supports multiple protocols (including synchronous, SDP, DDP, X.25, and X.75) and multiple high-speed links up to 56Kb/s.

With our modems and data-voice multiplexers, and the integration of our network-control system in all layers of the network, we have become a dependable source for packet networks for the BOCs.

#### Comprehensive Services

In addition to supplying complete packet networks, we support our customers with a comprehensive array of services, such as network planning, commissioning, and installation, software and hardware engineering, and totally U.S.-based manufacturing facilities.

Join the growing list of BOCs and other telecommunications companies—including New York Telephone, Southern New England Telephone, Wisconsin Bell, Indiana Bell, New England Telephone, NEECH Communications (of U.S. West), and many more—who look to Databit for advanced packet-network systems.

# COMMUNICATIONS

## Merits of digital links may outweigh expense

By John Sirs

Digital communications facilities may be preferable to analog ones, but the economics and lead times associated with digital services are convincing some users with adequate analog networks to stand pat.

The merits of analog and digital facilities were hashed out by telecommunications managers at a session at Telecom '85, the recent International Communications Association meeting in Dallas. As one attendee noted, "If you have a good analog network, you can't cost justify anything else." However, this will change if analog private-line rates increase.

Other than the expense and the amount of time it takes to install digital facilities — depending on the geographical area and the speed of the line needed — digital facilities usually outperform analog lines hands down. Some benefits of digital facilities include the following:

■ Many things can affect data transmission over an analog facility, such as circuit degradation because of phase jitter and noise interference such as cross talk.

Digital circuits are not subject to the same problems and typically, but less frequently, quit outright instead of fail slowly.

■ Because there are fewer things that can go wrong with digital facilities, they are correspondingly easier to troubleshoot. Digital transmission quality can be ascertained using one scope, whereas analog leased lines require use of multiple monitoring tools. This fact fortifies the time required to train network operators.

■ Digital facilities are more reliable and require less maintenance. Uptime of 99.5% or better is not unheard of with digital facilities. No modems are required.

See ENR/AT, page 61

## MCI unveils packet-switch net service

By John Sirs

CI Staff

DALLAS — MCI Communications Corp. officially unveiled a packet-switching service for large users at the International Communications Association's Telecom '85 meeting here and unveiled its virtual network service.

The service, called MCI Datacenter, is aimed at users who spend at least \$100,000/mo on data communications, said Bob Yundt, director of data communications services at MCI. The service is being marketed like a private network offering enabling users to contract for customized services.

MCI network facilities include four Northern Telecom, Inc. 8L-10 packet-switching nodes — located in San Francisco, Los Angeles, St. Louis and Washington, D.C. — interconnected with redundant MCI 56K bit/sec. facilities.

Access facilities, service-level agreements and network control are all determined on an individual customer basis, Yundt said.

Terminal and host interfaces available include Level 8.25 and support of those protocols: asynchronous communications, IBM SDD Binary Synchronous Communications, IBM Synchronous Data Link Control and IBM SJE S780/2780. The user can also customize support for nonstandard protocols like those typical of point-to-point terminals, Yundt said.

Customer access is provided at 9.6K bit/sec. and 56K bit/sec. over dedicated lines, and dial-up connections to dedicated ports are supported at 1,200 bit/sec. For sharing for dial-up service will be available in the future, according to Yundt.

Contractual service-level agreements can specify network availability, service contractual guarantees and message delivery times. The user can also contract for added network control where needed, providing customized subnetworks and control over

## Managers cite integration woes

By Paul Karszenowski

CI Staff

DALLAS — Managerial rather than technical problems are hindering the acceptance of voice and data integration in many corporations.

That was the view of speakers at a session of the recent International Communications Association annual meeting, Telecom '85.

The audience at the session was asked to select the chief problems that telecommunications managers face. One major problem cited was the murky distinction between data processing and communications functions.

"Data processing personnel are always trying to run the communications side of the house, and communications people are trying to decide how to run data processing," one attendee noted. Most of the ap-

proximately 100 session attendees were telecommunications managers.

The tension between the two disciplines was evident in remarks made by speaker Kerry Overlan of United Brands Co. Overlan said, "As voice became digitized [at United Brands], telecommunications functions were incorporated into the data processing department, and a war started," he said. "Data processing managers welcomed communications professionals into the IBM webworld [Digital Equipment Corp.]."

Rather than fighting the change, Overlan recommended that telecommunications managers use it to their advantage. "Today, disciplines are unfused, and there are not clear managerial boundaries," he noted. He listed a number of areas where voice and data processing functions now overlap: Many private branch exchanges

See TELECOM, page 61

## Data channel service unit available for AT&T's DDS

SIMI VALLEY, Calif. — Teleprocessing Products, Inc. has announced a combination channel and data service unit for AT&T's Dataphone Digital Service (DDS) that supports IBM's Synchronous Data Link Control protocol.

The TP-502 CSE/DSU digital termination unit is said to provide non-interfering remote diagnostics and network management capability to DDS networks. The company's network management approach, dubbed Multidrop Network Management, reportedly enables diagnostic information to travel on existing DDS links simultaneously with live data.

An IBM Personal Computer XT-based control site diagnostic facility offers the user access to diagnostic and performance characteristics of

the network, according to the company.

The TP-502 is priced at \$1,795.

The Multidrop Network Management system, to be introduced at user conferences in upcoming weeks, will range upward in price from \$38,000, depending on the number of lines supported and management options selected, the vendor said.

Teleprocessing Products has also announced price reductions across its standard line of digital terminal units. List prices on the TP-501 for 2.4K to 9.6K bit/sec. and TP-507 for 56K bit/sec. have been reduced from \$1,025 and \$1,095 to \$950 and \$750 respectively.

Teleprocessing Products is located in Building 7K, 4605 E. Industrial St., Simi Valley, Calif. 93063.

## Wang terminal introduced for use with Intecom PBXs

DALLAS — Intecom, Inc. and Wang Laboratories, Inc. announced a terminal made by Wang for use with Intecom's private branch exchange switches.

Originally hinted at back in September at the Telecommunications Association Conference in San Diego, Keystone is the first product to come out of the alliance created when Wang bought 30.5% of the switch manufacturer.

Keystone is a combination telephone and, initially, TTY-type dumb terminal. Through connection to Intecom's IRIX PBX, Keystone is said to provide speed dialing, voice messaging and terminal emulation. It has a 128K-byte memory and can communicate with an IRIX at 19.2K bit/sec. According to Intecom, users will

be able to connect Keystone with the CPU portion of a Wang Professional Computer, providing access to MS-DOS-based applications.

What's the function?

When an IRIX is connected to a Wang VS computer, Keystone is said to be able to function as a VS workstation capable of accounting Wang Office applications such as electronic mail, managing, file management and calendaring; however, it does not allow access to VS-based word processing.

Keystone is being offered to existing IRIX customers at \$2,400 and will be available in the third quarter, Intecom said.

Intecom is located at 801 Intecom Drive, Allen, Texas 75002.

## COMMUNICATIONS

## Uninet net to support IBM protocols

LENEXA, Kan. — Uninet, Inc. has added IBM synchronous protocol support to its packet-switching network.

The service offerings include 3270 Binary Synchronous Communications (BSC) emulation/termination, 3270 Systems Network Architecture/Synchronous Data Link Control (SDLC) emulation/termination service, X.25 cluster controller support, micro-to-mainframe connection capability and X.750 support.

The IBM 3270 BSC and SDLC service enable customers to use IBM 3270 series terminals and devices with Uninet and enable personal computers equipped with asynchronous modems to emulate 3270-type devices.

Host connections can be made through packet assembler-disassembler or with IBM's NPSI communications program. The X.750 service allows users to operate RJE applications from 3780 and 3780 devices.

The service offerings are scheduled to become available on June 1 in Kansas City, Mo., New York, Chicago and Los Angeles, the vendor said.

Uninet is located at 10661 Lakeview Ave., Lenexa, Kan. 66219.

## VOICE/DATA COMMUNICATIONS

ITT Telecom has added data switching ability to its line of System 3100L private branch exchanges.

The feature supports simultaneous voice and asynchronous data transmission, the vendor said. System 3100L is said to supply speed and format conversion and automatic data call setup. Devices are supported with RS-232C or RS-422 interfaces.

The System 3100L supports between 40 and 388 lines or ports, and 180 ports are nonblocking. Data can be transmitted at speeds up to 19.2K bit/sec. per port.

System 3100L features station message recording, least-cost routing, direct inward dialing, direct inward system access, intercom, paging and teleconferencing.

The company said that a system with data switch option and terminal adapter devices costs approximately \$800 per line.

ITT Telecom, Business and Consumer Communications Division, 6131 Falls of the Neuse Road, Raleigh, N.C. 27608.

Nokle-Kline Corp. has announced a device that enables users to send data over existing twisted-pair telephone wiring.

The product, ECD-SW, is said to enable users to transmit full-duplex synchronous or asynchronous communications at speeds up to 19.2K

bit/sec. over two wires. The phone can be used normally when data is not being transmitted.

The product costs \$700 per node. Nokle-Kline, 6450 Bryden Dairy Road, Largo, Fla. 32543.

Data General Corp. has announced a computer-to-private branch exchange interface board for its Eclipse 32-bit computer systems.

The DG CPU/24 board adheres to the interface standard developed by Northern Telecom, Inc. and Digital Equipment Corp. and supported by Rolm Corp., Mitel, Inc. and Intecom, Inc. The board enables DG computers to be interfaced to these manufacturers' PBXs through a CPU interface at 1.54M bit/sec.

The CPU/24 board is a single 16-in. intelligent PBX link controller that provides 24 10.2K bit/sec. asynchronous channels. Computers may be installed at distances of up to 1,600 ft. from the PBX.

The CPU/24 intelligent PBX link controller board, available immediately, is priced at \$4,000.

DG, 4400 Computer Drive, Westboro, Mass. 01581.

Octel Communications Corp. has announced a smaller capacity version of its Aspen voice message system.

Called the Aspen Branch voice message system, the low-end version can be interfaced with any private branch exchange and integrated with

Rolm Corp.'s CBE, Northern Telecom, Inc.'s ML-1, Lincor UTX-1001, all Mital, Inc. switches and Centrex services.

The Aspen Branch system is housed in a cabinet measuring 21 by 18 1/2 by 13 1/2 inches.

The price of an Aspen Branch system capable of supporting 50 to 100 users starts at \$40,000 for a four-port system with 6.4 hours of message storage. A version of the Mital-integrated Aspen Branch systems will be sold for \$85,000 as a result of an arrangement with Mital.

Shipments of the Aspen Branch system are scheduled to begin this month, and volume shipments are expected to begin in July.

Octel, 1841 Sander Road, San Jose, Calif. 95112.

GTE Communications Systems Corp. has announced the Translink telecommunications transmission package, said to combine a channel bank with equipment necessary to provide subscriber services.

According to a spokesman, the primary application of Translink is to connect voice or data telecommunications circuits or program channels from a central office to a customer's location via T1 transmission lines. Translink employs GTE Communication Systems' standard 9004B channel bank, which digitizes 24 or 48 voice channels at 54K bit/sec. for transmission over one and two standard T1 lines.

Translink measures 61 in. high by 60 in. wide by 18 in. deep.

Do you still think automatic configuration management is "pie in the sky"?

Think again.  
It's here. Now. Proven.  
Deliverable today!

With Softech's Charge and Configuration Control (CCC™) tool, you're in charge.

**CCC Automates:**  
• management of changes and configurations • control over releases of changes and where • tracking of release reports • maintenance of previous versions • document control • management reports archiving • and, much more.

**CCC is Interactive And Personal:**  
It supports all programming languages, and comes with on-line manuals.

**CCC is a Proven Product:**  
Over 1,800 Softech products are installed worldwide. CCC is supported on the Apollo, DEC VAX,

IBM MC, Gould B.E.I., Honeywell 6000 series Lasec 88, DPS 8000, HP 9000, IBM SPS, 3600 and 4300 computers.

**CCC is the Solution for the 80's.**  
It resolves the most important problem facing the software industry today: configuration management. CCC offers true configuration control: a means of managing all components of a given release can be managed as a unit.

There is More.  
CCC is a stand-alone component of Softech's Interactive Programming Environment (IPE™) also available.

Call today for more details or a hands-on demonstration.

# The computer system that made mothers' eyes glisten and management faces glow.

A special bouquet of flowers says love in a way that nothing else can.

Ask the more than 1,000,000 mothers who received them from distant sons and daughters through the floral network of Florists' Transworld Delivery (FTD) this Mother's Day.

It was a big job for FTD,\* and this sort of peak surge could strain an ordinary computer system to the breaking point. But FTD doesn't use an ordinary system. They use a Sperry 1100 Series central computer, backed by the Mapper System. There is other equipment involved, but Mapper provides for very special applications to handle the very special needs of FTD.

When your flower order is sent

via this network, the florist who will be making the delivery has all the information quickly and in printed form. Eliminating the possibility of error.

You can't expect Florists to become computer experts, and that's why this system was designed to be so easy to use. Non-DP people can master it in a day. And it's all in plain English.

An advantage of Mapper, according to FTD Executive Vice President, William Mass, is that, "Complicated internal analyses and customized management reports can be designed and tested in less than half the time it takes to write a program in COBOL."

The Sperry Mapper System also allows FTD management

to provide inventory control and telemarketing to its floral members.

In the words of Bill Mass, "Our task would be far more difficult without Sperry...without the Mapper System."

Mapper: The system that brings joy to mothers and management.

For more information on the MAPPER System or to arrange a demonstration at a Sperry Productivity Center, write: Sperry Corporation, P.O. Box 500, Blue Bell, PA 19424-0024. Or telephone 1-800-547-8362.

FTD and its emblem are registered trademarks of Florists' Transworld Delivery Association. Mapper is a trademark of Sperry Corporation.

## COMMUNICATIONS

Continued from page 50

28 in. wide by 35 in. deep. The package will serve one T1 line, up to 24 channels, using any combination of 56Kb/s channel units, including data, voice and program channels. A second T1 line can be added by including another T1 channel service unit, additional common equipment and secondary channel units.

Transmit, scheduled for third-quarter availability, is priced up to \$15,000 for a 3-channel version. **GTE Communications, 2600 W. Douglas Road, Phoenix, Ariz. 85007.**

**Stromberg Communications Systems, Inc.** has announced that it will introduce a T1 interface and a Digital Multiplexed Interface (DMI) for the System II and III private branch exchanges.

The digital T1 interface will be compatible with industry standard T1 buses and DS-1 interfaces and support DS0, DS0, DS1 and the P0 format. It will reportedly be available in July at prices that have yet to be determined.

The company also said it will develop DMI, an interface that specifies T1 signaling, which was developed by AT&T Information Systems. **Stromberg is located at 186 Wood Ave. S., Iselin, N.J. 07030.**

## Western Union unveils SDNS

**SADDLE RIVER, N.J.** — Western Union Corp. has announced Software Defined Network Services (SDNS), which is said to have rates roughly 35% lower than its Optimized Wire rates and approximately 50% lower than AT&T Wire rates.

Subject to approval by the Federal Communications Commission, the service is reportedly aimed at large corporations with heavy calling traffic between multiple branch offices. All SDNS lines have access to Western Union's nationwide network, giving users a single trunk group for all voice/data communications.

To create a software-defined network, Optimized Wire users have to provide Western Union with the telephone numbers of their various branch offices to be entered into the SDNS data base. Western Union then assigns individual telephone numbers for each location and extension. This enables users to access branch office dial-up facilities with private dialing plans.

SDNS will initially be available in New York; Chicago; Phoenix; Los Angeles; San Francisco; Detroit; Dallas; Cincinnati; White Plains, N.Y.; Toledo, Ohio; Washington, D.C.; Boston; Houston; and Philadelphia. The maximum discount applies when the customer reaches 60 hours of usage.

SDNS customers who also use Western Union's Easylink electronic mail service, worldwide Telex and/or TWX services, are reportedly eligible for the recently announced joint service discount. This is said to allow SDNS customers to apply 35% of their other Western Union service bills against their SDNS bill to a maximum of \$1,000 per month or 10% of their long-distance service bill.

**Western Union, One Lake St., Upper Meriden, N.J. 07458.**

### NEW T1 PRODUCTS / TELECOM

**Polymet Technology & Electronics Corp. (PTEC)** has announced the Model 4545 modem, which operates at 4.8K bit/sec, full duplex and over two-wire leased or dial-up lines.

The 4545 has an echo cancellation feature that weakens echoes by a factor of 80db for full-duplex operation over two-wire dial-up lines, the vendor said. Echo cancellation enables the telephone bandwidth, 300Hz to 3,400Hz, to transmit in both directions simultaneously.

The 4545 provides synchronous operation and offers as an option an asynchronous-to-synchronous converter. The 4545 has an automatic answer/disconnect feature and is

available in both stand-alone and rack-mounted models.

The 4545 complies with CCITT V.23, which defines modems operating at 4.8K bit/sec over two wires and that have fallback speeds of 2,400 bit/sec or 1,200 bit/sec. The 4545 will also be compatible with the future 9.6K bit/sec, two-wire full-duplex modems when operating in the 4.8K bit/sec fallback mode.

The model 4545 is priced at \$2,500 and is available immediately. **PTEC, 12 Seely Ave., Paterson, N.J. 07654.**

**Canoga Data Systems** has announced an eight- to 16-channel, point-to-point multiplexer for asynchronous or synchronous traffic that uses a fiber-optic link of up to one mile.

The CMX-816 multiplexer can combine eight or 16 asynchronous channels ranging in speed from 2,400 to 19.2K bit/sec over the DMZ, which is being driven at 1.92K bit/sec. In asynchronous applications, the multiplexer can handle channel speeds to 19.2K bit/sec.

Each channel on the CMX-816 can be clocked externally or can be programmed for its own internal clock rate. The multiplexer can support different asynchronous rates and external timing on different channels, the vendor reported.

The eight-channel CMX-816 multiplexer can be expanded to 16 channels and can support an RS-232C, V.24 or RS-422 interface for each channel. The CMX-816 costs \$2,750.

**Canoga Data Systems, 11215 Vanowen St., Canoga Park, Calif. 91302.**

# Lost Data Means Than to Others.

**TELECOM** *from page 57*

digital coding signals, personal computers and telephone functions are merging and local-area networks run electronic mail applications.

"All of these products and services are just now evolving, and telecommunications managers are standing at crossroads," he added.

The key way for telecommunications managers to gain power is to take charge of the office automation applications. Overton cited the following two reasons for this approach:

"OA is an area with which most telecommunications managers are familiar."

"Taking charge will help the manager gain power in the corporation."

"Whoever controls office automa-

tion will control a corporation," Overton claimed. "It will be the key corporate application in a few years." To gain this control, a telecommunications professional must establish a relationship with IBM. "IBM will be the prime supplier of office automation applications," Overton predicted.

Let out and out.

Overton urged attendees to go out and sell themselves and their position to the corporation.

"Today, managers face a tremendous amount of risk," he concluded. "But there is also a tremendous amount of reward. If the telecommunications manager plays his cards right, he could control his applications. If he doesn't, he will be relegated to merely providing the switch that is used for those applications."

**MCI** *from page 57*

contains applications.

The privatized service will contain three basic rate elements: access charges for the line facilities used; time or purchase of access equipment used, such as packet communication devices; and usage rates. Contract terms are flexible, Yundt said, and may be for less than a year, although he expects some users will want the flexibility offered by long-term contracts.

MCI's Sprintnet is available now. The Security Pacific National Bank in Los Angeles has reportedly been using the service since last year. Yundt said MCI expects to sign three or four other customers by the end of the year.

MCI also unveiled MCI V Net, a software-defined network service

targeted at users with multiple locations and total voice traffic of at least 200,000 min./mo.

MCI V Net is said to enable virtual private networks to be custom designed, providing corporate network access to all company employees from any location, the company reports.

Advantages over other software-controlled networks, according to MCI, is that it supports credit card traffic, enables customers to price services to corporate departments by hour from MCI bills, supports international calling and provides directory assistance for all V Net users. Security Pacific will also be the first company to use V Net, which is scheduled to be installed in November.

MCI is located at 1125 10th St. N.W., Washington, D.C. 20004.

**DIGITAL** *from page 57*

digital bit-error rates also reduce the number of retransmissions required when compared with analog facilities.

When lines are dropped, the mean time to repair digital links is generally far shorter than the time required to troubleshoot analog facilities. One user said the average time to repair an analog line in his network was two days, as opposed to two hours for his digital lines.

Another obvious advantage of digital links is the ability to support higher data rates. Users hesitate to push anything higher than 9.6K bit/sec. over analog voice-grade leased lines, with many opting for 4.8K bit/sec. because of reliability (the bit-error rates at higher speeds can negate the throughput advantages). The maximum theoretical rate for voice-grade lines — no conditioning — is 16.8K bit/sec. Digital services support rates up to 1.54M bit/sec.

Problems that have cropped up with digital services are usually associated with the multiplexing hardware — particularly in the case of T1 multiplexers for 1.54M bit/sec. facilities — rather than the service line, subscribers reported.

Users also voiced concern about the problem of backing up digital links. Putting in redundant facilities is usually too expensive, and dial backup for digital links is offered by only a few vendors (users noted General Datacomm Industries, Inc. in Danbury, Conn.) and is still limited and expensive.

But selling migration to digital facilities to management can be a hard task, given present-day rates, particularly when you are a short way into the depreciation of current modems and other communications hardware used in analog networks.

Some users expect tariffs for leased analog lines to increase and equal digital rates and perhaps surpass them. If this happens, the merits of digital will make it the obvious choice for data networks.

# More to Some People

As a manager with PC data to archive, you're probably more than a little concerned.

Your neck is on the chopping block. But it needn't be. A PC Megastore® hard disk/streaming tape subsystem from Ampex can give you safety and convenience no other storage can match.

Why? Three unique differences:

One: The tape's formatable and uses the subsystem's processors to skip over error-causing flaws in disks and tapes. So it won't corrupt files as you move them from tape back to disk.

Two: The tape's bootable. So you can access both your operating system and data files directly if a disk fails.

Three: The tape's addressable and uses cache memory to store your file directory. So you can get any backup file you need in under 92 seconds—not the 1 hour, 4 minutes other streamers take.

Even if the file you need is on another PC Megastore subsystem, there's no problem. Tapes are interchangeable. Once you've slipped in the host adapters—you can move PC Megastore from one kind of computer to another just by moving its plug.

Sound safe and easy? It is. It'll stay that way too. The PC Megastore subsystem is warranted for a full year by a company known for manufacturing quality computer peripherals for over 30 years: Ampex.

So if you're worried about PC file security, call us at 800 421-6868 (800 821-9473 in California).

We'll help you keep your data—and your head.

# SYSTEMS & PERIPHERALS

## Data base machine's appeal rising

By Susan McElwain  
CIW

Installing a host-and-processor dedicated to maintaining a large data base is a concept that is growing quickly among data base users.

During a time when software vendors appear quite secure about their relational data base management systems that give end users direct access to information, integrated hardware and relational DBMS software — known as data base machines — are managing to find a niche of their own.

That niche could get much bigger, according to one user. Michael Coppi, vice-president of systems and technology in Citibank's retail-banking division, is sold on the idea of the data base machine. His division purchased two Teradata Corp. DEC/1012 machines about a year ago and uses the dedicated systems for information center operations and more recently for transactions in its branch operations.

"I don't believe software alone can solve the problem of high-performance processing and rich information retrieval," Coppi said. Complex information retrievals are a major concern for one of the world's largest private banks, which

British-Lee, Inc. data base machine

on any given day may want to ask the data base how many of a particular type of certificates of deposit were more than \$10,000 it sold at a particular location. Parallel processors within the data base machine allow the entire data base to be searched at the same time, Coppi said. "I could do a [complicated] retrieval question and get an answer back in five minutes — sometimes even a few seconds. At the

same time, I can interrupt it and do some transactions like a balance inquiry," he noted.

The machine used at Citibank is from one of two vendors making headway in the data base machine market, according to Shaiun Aizer, a private consultant specializing in data bases. While Teradata's DEC/1012 data base machine is aimed mostly at large IBM mainframe shops, British-Lee, Inc., with a user base of approximately 300, focuses primarily on the mid-range systems, particularly Digital Equipment Corp.'s VAX systems. British-Lee has been shipping its product for approximately four years, while Teradata has been shipping its product for about 14 months.

Aizer and other industry observers said they believe that for now, data base machines are best suited to users implementing specific applications on huge data bases. Research and development projects are one such area, she said.

"Users today are companies that are doing leading-edge research," according to T. Capers Jones of Software Productivity Research, Inc. in Acton, Mass. "Of the universe 500 companies, probably 10% would have the need for a data base machine, and

## Library of Congress tests optical disk system

By Wally Smith  
CIW Washington Bureau

WASHINGTON, D.C. — The optical disk system being tested at the Library of Congress may someday help the world's largest library to store and preserve its collection of old documents, maps, photos and recordings, as well as enhance retrieval of the materials, officials said at a recent conference here.

The system will not only let the public use VDTs to view such things as ancient maps too fragile to handle but will also give the library's Congressional Research Service (CRS) access to library materials, according to Felix P. Kraybill, section head of CRS office systems.

In a presentation at the Association for

Information and Image Management's recent conference here, Kraybill and Alan Linden, senior systems analyst, disclosed that CRS also is studying the feasibility of transmitting CRS reports and library materials from the optical storage system to computer terminals in the offices of U.S. legislators.

Transmission could occur on an installed network of broadband coaxial cable or possibly on phone lines, twisted-pair cable or fiber-optic lines, they said, adding that a report due in June will explore the options.

CRS is a unit of the library whose charter is to provide Congress with unbiased reports on public policy issues, frequently drawing on the library's extensive book

and periodicals collections.

The CRS researchers will respond to an estimated 460,000 congressional inquiries this year, Kraybill said, producing 37.5 million pages of information from the existing Xerox Corp. microfiche reprographics system. Out of a staff of 860 people, 13 do nothing but carry papers from the library buildings to legislative offices across the street, he said.

Kraybill and Linden stressed that the optical disk pilot program — which will run through 1986 — is undergoing extensive evaluation by library and CRS users. The library also is building a laboratory to test the archival properties of the optical disks, since preservation of fragile images

## Automation seen driving revolution in office functions

By Deane Robinson  
CIW Staff

NEW YORK — Office systems are revolutionizing the secretary's job, while managers and professionals are starting to fire off computers.

That was the conclusion of a recent study which contends that office technology decisions are quickly becoming the realm of the MIS/ID manager and not the office manager. The study also asserts that office microcomputers are increasingly being bought at retail stores and that electronic communications in the office is increasing rapidly.

The study, "Techtrends '86: Inside the American Office," published by the Omni Group, Ltd., said the number of secretaries using electronic

spreadsheets will double by 1986, from 21% to 41%, while secretarial use of graphics software will leap to 33% from 16%.

A ransom secretaries are using computers for more applications is that their bosses are bored with computer use. More than one-third of 201 people — mostly department managers and personnel administrators — in the top 4,000 companies surveyed cited boredom as a critical problem associated with computer use.

References in the report to office computers refer to desktop computers, personal computers, integrated office systems, stand-alone word processors or other equipment generally believed to be of use in the office en-

See DBMS page 68

## Disaster service enhanced

DEC expands offerings, increases coverage area

MAYNARD, Mass. — Digital Equipment Corp. has introduced a series of data center recovery services. The service includes the following five components:

- Recover-All, which provides users with an on-site maintenance service for items not typically covered under conventional maintenance agreements. The service features movement to and from a safe place, repair and replacement of equipment damaged by incidents not covered under service agreements, such as fire, water damage, natural disasters, power failure, theft, burglary and vandalism, DEC said.
- Reserve, which gives users a

computer-ready room known as a shell site that is equipped with power, communications capabilities and climate control when the computer room is not functional, but the user's hardware is working. Equipment replaced under Recover-All would be installed at the shell site, and administrative office at the same site would be available to the customer.

- Restart, which keeps business operations running at a remote backup facility. The plan includes 10 VAX systems configurations and administrative space and 600 communications lines. Customers can use their applications interactively, and if a major area disaster strikes several companies at once, they can be tied into other systems at the seven existing centers around the country. This service is intended to be an emergency

# SOMETIMES YOU NEED MORE THE QUESTION IS,

## THE MINI TOWER

## THE TOWER

Maybe you run a small business. A department of a large business. Or a nationwide network of businesses.

No matter what size business you run, one of the NCR Towers™ above can help you run it better.

Because they all give your people a lot more speed, memory, storage and versatility than personal computers. For a lot less money.

**MORE THAN A PERSONAL COMPUTER  
IN MORE THAN ONE.**

The Towers utilize UNIX SYSTEM V® or

RM/COS® as their operating system. Which means they're perfect for the sophisticated user who wants to write his own programs, as well as for the beginner who can choose from hundreds of off-the-shelf solutions to his problems.

If your business or department has already invested in IBM or IBM-compatible personal computers (the NCR PC 4, for instance), you can use them as intelligent work stations with any of the Towers.

And, finally, the Towers can all stand

alone or be networked together. As well as communicate with other computer systems via SNA, X.25 and other industry standard protocols.

**THEY PERFORM BRILLIANTLY  
BECAUSE THEY'RE BUILT BRILLIANTLY.**

The Towers are all powered by Motorola microprocessors (the regular Tower by the 68000, the XP and Mini by multiple 68010's).

Other state-of-the-art features include Winchester hard disk and the Intel Multibus®. Not to mention an error-correcting memory

# THAN A PERSONAL COMPUTER. HOW MUCH MORE?

## THE TOWER XP

and a unique power-failure recovery system that enables all the Towers to survive power outages (thus keeping your data intact).

**PEOPLE WHO NEED MORE  
THAN A PERSONAL COMPUTER DON'T  
ALL HAVE THE SAME NEEDS.**

Of course, the Towers do have their differences.

You can choose from 512 kilobytes of memory to eight megabytes. From twenty-five megabytes of disk storage to 260 megabytes. From a system for one to eight

users to a system for up to sixteen users. Starting for as little as \$6,995.

But no matter which Tower you choose, you'll choose a computer that's a good deal more than a personal computer. And one which is backed by service from 1,200 offices throughout 120 countries.

Which means that in addition to getting all the computer you need, you'll get all the support you need.

For more information on the NCR Towers, dial us toll-free at 1-800-CALL NCR.

**NCR**

**INNOVATIVE COMPUTER TECHNOLOGY.  
YOU CAN EXPECT IT FROM NCR.**

## DATA STORAGE

A Zetaco, Inc. has announced its BMX-3, a disk drive controller that supports a data transfer rate of 1.5M bytes/sec. using disk drives attached to Data General Corp.'s Eclipse and MV series minicomputers via the DG Burst multiplexer channel.

BMX-3 is said to offer full emulation of Data General disk subsystems including Data General's 6122, 6160, 6161, 6214, 6060, 6061 and 6067 subsystems under DG's unmodified AOS/Vs, AOS and Eos operating systems. It supports any mix of up to four Fujitsu America, Inc. RSM2 storage module device interfaces and/or storage module device drives, the vendor said.

Electronically erasable program-

mable read-only memory on the BMX-3 allows the unit to be configured through included Zetaco software.

The parameters of most popular drives are already programmed in, and the user can input the characteristics of new drives with Data General emulations as they become available, the vendor said.

Zetaco also offers cabling for the BMX-3, either for Data General's Federal Communications Commission-compliant chassis or the company's older non-FCC-compliant chassis. External cables for the FCC-compliant chassis cost \$400. Non-FCC-compliant chassis do not need additional cables.

The BMX-3 costs \$4,500. Quantity discounts are available.

Zetaco, 6350 Shady Oak Road, Eden Prairie, Minn. 55544.

## OMNI from page 63

viroment, a spokesman said.

Out of 316 interviews with members of planning committees, administrative services, departmental representatives and MIS managers in Fortune 1,000 companies, 70% of the companies surveyed said MIS is the most influential department for personal computer (as opposed to other office system) purchasing, the report said. MIS is responsible for deciding which software packages will be bought for personal computers in 74% of the firms surveyed.

MIS controls purchasing of office systems in general in 57% of Fortune 1,000 companies, the report said. The next most powerful group is an office automation committee (in 8% of the companies surveyed), but the typical committee is dominated by MIS, the

report said.

Corporate personal computer buyers prefer to make their purchases from retail computer stores, the same segment of the survey showed. Almost half (46%) of the firms surveyed claim to prefer retail stores, while 44% prefer to buy directly from the vendor.

The reasons given for each preference were similar — lower prices, better price breaks, availability, service and support.

Based on 81 interviews with MIS and telecommunications representatives or people in a position to affect the planning and purchasing of communications equipment in Fortune 1,000 companies, electronic communications is increasing rapidly. Local area networks have been installed in 40% of the companies surveyed and by next year more than 80% of respondents will have put up networks, even if they are only small pilot projects.

Thirty-six percent of the companies surveyed use private branch exchange-based communications now; 72% of respondents claim they will use PBX-based communications by 1986, the study said.

Sixty-two percent of the companies surveyed already use some form of long-distance electronic messaging, including Telex, the survey said. Only 8% of the companies plan to start using this technology, the study said.

A summary of the survey is available free from the Omni Group at Suite 460, 116 E. 67th St., New York, N.Y. 10022.

## LIBRARY from page 63

is a major objective of the project, Linden said.

For the analog system, the 12-in. video disks are being mastered by Sony Corp. and generally include color images, such as the motion picture collection, photographs, architectural drawings, maps and cartoons, the CBS officials said.

The digital optical storage system will be used mostly for black-and-white images, such as magazine articles and journals. The system was designed by Integrated Automation, Inc., an Alameda, Calif.-based systems integrator. It includes paper and film scanners, a jukebox-type optical disk drive that uses 18-in. optical disks from Pariscast-Thomson CSP, high-resolution monitors and Xerox 2700 and 6700 laser printers.

The pilot project is being watched closely by other government offices and libraries because the digital optical disks store 1G byte of data on a side. Also watching closely is an advisory council from the publishing industry, which is worried about copyright protection for works stored on the optical disks.

"The publishers are watching us like hawks," Linden said, and they have granted permission to store their works for the duration of the pilot program.

## SEARCH and you will FIND... ...Even faster than Spot!

Spot's friendly and so is SEARCH...

Spot's smart and so is SEARCH...

Spot finds things that are lost and so does SEARCH...

Spot can be your best friend...

...and SEARCH will be your business' best friend

If the system you use makes it difficult to find information, you need SEARCH.

SEARCH is the information retrieval software that provides fast, comprehensive searching and display of all types of textual documents — letters, memos, reports, contracts, proposals — from one page to hundreds of pages.

SEARCH is the only program that lets you store and retrieve information in its natural state — original text. It's easy to use because it stores and retrieves the way you write and think. Your word processing output can be the input to SEARCH, eliminating the need to index or tag specific parts of your text for retrieval. Every word is stored for searching, even the full text of long, multiple documents.

SEARCH was developed by BRS, one of the largest online systems in the world. It's design reflects the experience of thousands of information professionals performing millions of online searches.

Plan to attend the FREE SEMINAR on BRS/SEARCH in Washington, D.C. on June 3 & 4.

For more information call Joseph Pitman at (800) 235-1209.

Power...  
Flexibility...  
Ease of Use.

SEARCH is the  
ultimate retriever  
for all your  
information  
management  
needs!

For mainframe,  
mini and micro-  
computer systems.

## RECOVERY from page 83

cy short-time service. DEC said details of the types of applications to be run at the site would be specified in a vendor-user contract.

Information Management Consulting/Education Service, which provide help in developing contingency plans.

in Data Protection Service Centers, which store customer media — both DEC and non-DEC — in environmentally controlled vaults. The shell sites and DEC-configured sites are in these centers, the vendor said. All sites will be completed by the end of this summer, DEC said. Each vault can hold 70,000 disk packs or 250,000 tapes, the vendor said.

DEC offers pickup and delivery service seven days a week, and customers within a 60-mile radius of the

center can get emergency pickup or delivery within three hours, the vendor said. Contracts exist in Boston, Chicago, Los Angeles, Toronto, Dallas, Atlanta and New York. Annual storage fees range from \$600 for small businesses to \$30,000 per machine for large companies.

Customers can see any or all parts of the recovery service, the vendor said, although Recover-All, Instant Backup and Recover-All for DEC's contract customers only.

A medium-size customer, such as a \$125 million business, would pay roughly \$50,000 for full services, DEC said. A small business using a minicomputer to control its basic accounts could store its data off-site and buy Recover-All protection for approximately \$1,000 per year.

More information is available from DEC, Maynard, Mass. 01754.

## DBMS from page 83

only about 20 or 30 are actively looking at them," he said. Part of the reason for this, he said, is that data base machines are relatively new technologies. "I know a number of companies whose stated policy is not to be at the leading edge but to use proven technologies," he said. Imagine a data base machine in a major airline, where hidden bugs damage the data base. The repercussions could be so enormous that companies like airlines want 100% reliable equipment, not necessarily what offers a lot of potential advantages.

For some companies, data base machines are simply too new. "When we established our data base strategies, the data base machine was not in vogue," said Frank Chamberlain, director of corporate data resources at the Hartford Insurance Group. Hartford has been using IBM's hierarchical DBMS for approximately 10 years, Chamberlain said.

Data base machines are not currently manufactured by IBM, which has converted its technology to acceptance in the market, according to Dorian Khalid, a consultant at International Data Corp.

The data base machine was not the best approach at The Boston Globe, which purchased a Britton-Lee machine two years ago. According to Dave Pearson, assistant manager of data processing, it was the reliability of storing data and the ability to off-load data bases onto a separate machine that played the paper's interest in a data base machine. "We found we just weren't getting the horsepower we needed out of the [Digital Equipment Corp.'s] VAX 11/780s."

While the machine was first purchased for use with decision support system applications, a networking problem prevented the paper from accessing more than three VAXs with the Britton-Lee machine. Pearson said. Prohibitive costs and some support problems caused the Globe to use the data base machine for small applications with data requiring few updates, Pearson said.

The expense of the data base machines are luring the Globe away from a full-blown data base machine toward a software solution, Pearson said. "Our [Britton-Lee] IBM configuration ran us closer to \$350,000," he said. "Every time we put a new VAX into the system, it was costing us \$20,000 for the software interfaces in the box."

Let DJC open your eyes. A company with only one product line can give you tuned vision. At DJC, we focus on your needs—not on brand preference. It's a difference we think you'll find quite eye-opening. DJC expands your horizons. With DJC, you'll see quality peripherals and systems from the leading manufacturers. And while this may make it harder to decide what to buy, we believe it's the only way to come to the right decision. We invite you to choose from integrated voice/data terminals, word processing systems, personal computers, video terminals, modems, protocol converters and printers...in stock, ready for delivery.

## Renier: IBM not leader in factory

## O. P. M. Leasing stock bid awaits court OK

By Peter Barabasi  
CW Staff

BURLINGTON, Mass. — IBM will not dominate the industrial automation market in the same manner that it dominates the mainframe market, the vice-chairman of Honeywell, Inc. predicted last week.

James J. Renier, who in February was elevated to share the company's chief executive office with Chairman Edson W. Spencer, said IBM would have to undergo "another kind of culture adjustment" if it hoped to repeat its mainframe history in the industrial automation area.

Prior to opening a two-day trade fair here to mark Honeywell's centennial, Renier commented on his company's goals of merging controls and computers with communications to automate factories and offices. In 1984, Honeywell's controls and control products divisions accounted for \$2.6 billion of the company's \$4 billion revenue; the information systems division, of which Renier had been president prior to the February reorganization, accounted for \$1.8 billion of the total revenue.

"When he named Renier to the chief executive office, Spencer said the reorganization would enable Renier 'to manage the integration of our computer and controls businesses. . . Information systems will be a central part of the company's plans to provide integrated systems using computer, communications and controls for key industrial, commercial building and government markets.'"

Renier said Honeywell is well positioned to assert a presence in those markets based on its strength in systems inte-

NEW YORK — A purchaser has been found for the stock of what used to be one of the nation's largest computer leasing firms, O. P. M. Leasing Services, Inc. of Greenwich, Conn., currently undergoing bankruptcy proceedings under Chapter 11 of the Federal Bankruptcy Act.

The court-appointed trustee in the case, James P. Hassett, has been granted a May 20 hearing to propose that a U.S. affiliate of the British firm Mercantile House Holdings in London buy O. P. M. Leasing's common stock for \$7 million.

An additional 50,000 shares of preferred stock would be distributed to creditors, and 10,000 shares of preferred stock would be retained for the management of the new company. The preferred stock would have a total value of \$5.6 million under the proposed stock purchase agreement, said Hassett's attorney, Mesachem

Zelmanovitz of New York.

"The company is going to continue in business," he said.

The previous owners of O. P. M. Leasing were convicted of fraudulent financing amounting to \$225 million by borrowing money to finance nonexistent leasing transactions. Former owners Mordecai Weissman and Myron S. Goodman were sentenced to 10 and 12 years in prison, respectively, after pleading guilty to fraud charges.

About \$60 million would be available from the company to pay off creditors, and \$47 million in tangible assets, including computer equipment for lease, would remain with the business under the new owners, Zelmanovitz said.

Mercantile House U.S. Holdings, Inc., the parent company's affiliate, is not yet the stock's approved bidder. Other parties may still bid until the court acts on the trustee's application, Zelmanovitz said.

## Tandon moves to counter slump

By Kathleen Burton  
CW Staff Writer

SAN FRANCISCO — Tandon Corp. plans to broaden both its customer base and product portfolio in an effort to reverse a recent drop in its sales, even if that means turning down business from its largest customer.

Only a year ago, Big Blue accounted for 56% of Tandon's total sales, making it the smaller firm's largest customer by far. Today, IBM's share of Tandon's revenue has shrunk to 15%, and the figure is unlikely to exceed 20% through 1987, according to company President Surjan Lal Tandon.

The vast majority of Tandon's business during the last two years will come from new, non-IBM sources. But with a possible shakeout looming on the horizon, "our problem now is to find healthy new customers," Tandon said recently at a Stan-

brecht & Quist Technology Conference.

A few days after the conference, the company posted second-quarter revenue of \$61.1 million, compared with \$106.7 million a year earlier. Losses for the recent quarter totaled \$18.9 million, compared with profits of \$10.4 million a year earlier.

At the conference, Tandon said his company will increasingly diversify its product line and revenue base by expanding into rigid disk drives, systems and subsystems, and private-label sales by computer manufacturers.

Last year, flexible disk drives accounted for 80% of Tandon's revenue, rigid disk drives for 8% and systems and subsystems for 7%. In 1985, this mix will shift, with personal computers constituting 25% of Tandon's sales, rigid disks approximately

## No relief for chip industry

INDUSTRY INSIGHT  
Peter Barabasi  
CW Staff Writer

There's no rest for the weary in the depressed semiconductor industry, according to the latest figures released by the Semiconductor Industry Association (SIA).

The SIA reported last week that average monthly orders for the three-month period ended in April were down 7.6% from the figure for the three-month period ended in March. According to the SIA, March is a traditionally high month for orders, and April orders slumped 37% from the high point.

SIA President Thomas D. Hinch-

man said recent U.S. Department of Commerce figures for computers and office equipment orders indicate that semiconductor orders should increase by the third quarter. However, he said, the SIA now projects that U.S. market billings, or shipped orders, for 1985 will be down 20% from 1984.

"The lackluster April orders picture is a result of continued declines in the shipping rates for computer and office equipment, causing these manufacturers to postpone semiconductor orders," Hinchman said.

If the chip industry problems continue to be reflected in depressed stock market prices, some securities analysts who continued to predict forthcoming recoveries

## Export regulations eased

By Charles Weller  
CW Staff

WASHINGTON, D.C. — Computer industry representatives have hailed the U.S. Department of Commerce's lifting of software export regulations as the removal of a major barrier to international high-technology trade.

The Commerce Department announced April 29 that it had rescinded its Dec. 31 regulations that, in the opinion of industry spokesmen, would have required government approval for virtually all software exports. The announcement climaxed an intense four-month lobbying effort by the Association of Data Processing Service Organizations, Inc. (Adapco), the Computer and Business Equipment Manufacturers Association (Cbema) and other organizations.

"We are really pleased," said Adapco Assistant General Counsel

Dave Wormer. "Our big complaint [with the Dec. 31 regulations] was that [the Commerce Department] imposed unilateral restrictions on software exports. This decision avoids unnecessary harm to our economic security while at the same time protecting our national military security."

The December regulations would have required a validated Commerce Department license for the export of 27 categories of software that previously required such a license only for sale to Soviet bloc nations. The April 29 decision reverses the regulations to their prior status and eases restrictions on a port of software not specifically listed by the Commerce Department to all nations except Cuba, Cambodia, Libya, North Korea and Vietnam.

"Before this decision, [the Com-

# Are expert systems more trouble than they are worth?

**OUTSIDE LOOKS**  
L. J. Katten

**R**ecently, *Computerworld* has had a number of articles de-  
scribing how expert systems  
software will revolutionize the way  
Americans do business. These pro-  
grams will bring the knowledge of  
experts to everyday people. No long-  
er must an expert be consulted to  
solve a difficult problem.

This got me wondering — what is  
an "expert"?

After some thinking, I concluded  
that experts are people who are li-

ble for their mistakes. They know  
when the standard rules apply and  
when they do not apply; their exper-  
tise allows them to go to the core of a  
problem instead of wasting time on  
the peripheral problems.

A system only as good as its user?

This raised another question:  
What good is an expert system if the  
person using it does not have the  
ability to tell whether the system is  
operating correctly? The user could  
be using it on incorrect advice.  
Take the following example.

You buy an expert system to write  
a will. Unbeknownst to you, your  
factual situation is so unique that  
the standard will-writing methodolo-

gy used 99.99% of the time is not  
applicable. Nevertheless, the will is  
written; six months later you die.  
Your heirs attempt to probate the  
will, and they learn the will is void.

If a lawyer relied on an incorrect  
expert system, that lawyer theoreti-  
cally has the skill and knowledge to  
recognize this error and correct it.  
Using this incorrect system and fail-  
ing to catch the error makes the  
lawyer liable for malpractice.

But what happens when  
nonsystems users this system? Will  
they have the skill or knowledge to  
recognize that something is wrong? I  
doubt it. In such a circumstance,  
there are only two ways to ascertain  
the will's validity — hire an attor-

ney to review it before using it or die  
and let a court examine it.

Neither is a very good choice. Hir-  
ing the lawyer to review the will can  
cost more than hiring one to write it  
originally. Dying to determine the  
will's validity defeats the purpose of  
using the expert system.

Similar problems exist in other ar-  
eas. For example, people use income  
tax preparation programs to prepare  
their taxes. I have seen many people  
take a home office deduction who  
were not eligible. Most of these later,  
the Internal Revenue Service invariably  
caught up with them, and they had  
to pay some more taxes, plus interest  
and penalties.

The expert systems they used did  
not tell them they were ineligible.  
But had they gone to H & R Block,  
Inc. or any other tax preparation  
service, the odds are the human tax  
preparer would have cautioned them.

So where does this lead? I wish I  
knew. But before everybody rushes  
off to this new navior, they should  
first ask themselves a few ques-  
tions: "What is my recourse if the  
advice I receive from the expert sys-  
tem is bad?"

*Katten is a writer specializing in  
computer law topics and a member

book, Computerized Tax Preparation  
Guide, was published last year by  
Friedman-Hall, Inc.*

## Realla COBOL. Migration without migraines.

Until recently, you had to abandon the business computer language when you developed micro-  
computer application software. The available micro COBOLs were inadequate—too limited, too  
slow. The best alternative—the XT/370 or AT/370 using IBM's COBOL—was very expensive and  
still too slow. To get acceptable performance, you had to retrain your programmers in Pascal or C.

**Realla COBOL is the cure for such headaches.**

Realla's compiler supports most IBM VS/COBOL and VS/COBOL II features, such as:

- COMP and COMP-3 data
- GOBACK, EJECT, and SKIP statements
- SELECT assignment names
- Structured programming extensions of VS/COBOL II
- Multiple entry points

You can download mainframe systems for development, maintenance, and testing. Productivity  
will soar.

You can compile faster with Realla COBOL than in most mainframe environments, even on  
floppy-based systems. Compile-time options allow cross-reference, brief and full code listings,  
and helpful features like subscript and decimal value checks.

Our interactive debugger lets you follow the program source, display and modify data, and set  
breakpoints using the normal optimized machine code.

**The results are startling.**

Our users report that their systems run up to 20 times faster when compiled by Realla COBOL.  
That's compared to our nearest micro competitor. The ratio is up to 100 times faster when  
compared to any of the others.

On the IBM PC AT, your programs can run at 370/148 to 370/158 speed. Realla's file system  
really makes your machine deliver, giving it a distinct edge over Pascal or C. Our indexed file  
system even has full key compression and buffer controls just like VSAM. The generated code is  
pure MS-DOS, so it can be run on most of the 8088/8086 machine family.

**And you can sell your programs without paying us a royalty fee.**

Realla COBOL is priced at \$995, including one year of maintenance and upgrades. Subsequent  
maintenance and upgrade contracts are currently priced at \$125/year/copy. Available for the  
IBM PC, PC XT 3270 PC, PC AT, PC-compatibles, and the TANDY 2000.

## Realla COBOL. What a relief.

IBM, PC, XT, AT, PC XT, 3270 PC, PC AT, and TANDY are registered  
trademarks of International Business Machines Corporation. MS-DOS is a  
registered trademark of Microsoft Corporation.

## British Telecom takes over Mitel

**KANATA, Ontario** — British Tele-  
communications PLC, the UK's major  
telecommunications company, will  
acquire 51% control of Mitel Corp. It  
was announced here recently.

Mitel, a telecommunications equip-  
ment manufacturer headquartered  
here, will sell British Telecom treasury  
shares worth more than \$300  
million (Canadian) if approved by  
Mitel shareholders, regulatory  
authorities and British Telecom's board  
of directors.

British Telecom was formerly con-  
trolled by the British government un-  
til last November, when the govern-  
ment sold off its 50.2% holdings  
under its privatization program.

In a prepared statement, British  
Telecom's chairman, Sir George Jeffer-  
son, said, "We intend to build on  
Mitel's management and research  
and development resources in coun-  
tries where it now operates."

Mitel was an early leader in the  
sale of small digitized private branch  
exchanges and was once believed to  
be an acquisition candidate for IBM,  
until IBM broke off joint develop-  
ment arrangements in favor of  
acquiring an equity interest in Rolm  
Corp.

Mitel suffered through five con-  
secutive losing quarters before show-  
ing a profit of \$44,000 for the quar-  
ter ended Feb. 22.

The company posted revenues of  
\$107.6 million for that quarter, but  
slightly under that of the year-earlier  
period.

## Paradyne holds customers despite lawsuit

By Kathleen Burke  
San Jose Staff Writer

**SAN FRANCISCO**—Paradyne Corp.'s sales and daily operations have been unaffected by its involvement in a highly publicized lawsuit, according to Robert S. Wiggins, chairman, president and chief executive officer.

The suit, instigated by a Securities and Exchange Commission investigation in 1983, accuses the Largo, Fla.-based communications vendor of violating federal procurement policies in winning a \$118 million contract from the Social Security Administration (SSA).

The 1981 contract called for the establishment of a nationwide communications network encompassing 1,650 SSA terminals NW, March 1984.

### Customers returning

Despite the suit, returning customers accounted for 50% of Paradyne's business in 1984. Wiggins said last week at a Roundtable & Quiet Technology Conference here. In 1983, the figure was reportedly 55%.

The case has not driven

old or new customers away to our knowledge," Wiggins said during an interview. "If they're not buying from us for that reason, then they're not telling us that."

This year, Paradyne will win 1,200 large accounts, each worth at least \$25,000, he predicted.

Wiggins' upbeat assessment comes at a time of

sharply reduced quarterly earnings for Paradyne. In the first quarter ended March 31, the company's profits totaled \$151,000 on revenue of more than \$68 million. During the same period in 1984, Paradyne earned nearly \$3 million on sales of \$60 million.

According to Wiggins, the lowered earnings were a result of delays in several

planned customer shipments.

Although he declined to identify which customers or products were affected by the delays, he did say the delinquencies had been resolved for the third quarter.

"This quarter's drop [in profits] is just a wrinkle and has nothing whatever to do with the pending litigation," Wiggins said.

Wiggins

## EDS doubles first-quarter profits

**DALLAS**—Electronic Data Systems Corp. (EDS), acquired by General Motors Corp. last October as a wholly owned subsidiary, recently announced that revenue for the first quarter more than tripled over year-earlier results, with profits more than doubling.

EDS reported that revenue from GM and its subsidiaries accounted for \$449.2 million of the firm's 1984 revenue. Revenue from non-GM clients was \$231.6 million, compared with \$150.3 million a year earlier.

Profits for EDS in the first quarter were \$38 million, or \$1.35 per share of GM Common Stock, compared with \$18.1 million a year earlier.

"I'm afraid we're not the dealership that offers a free digital watch with every text drive."

## WHEN YOU INTEGRATE VOICE AND DATA SYSTEMS, WE CAN HELP YOU AVOID THE RISKS.

When it comes to integrating voice and data systems, one wrong step can prove disastrous. That's why it pays to have someone on your side who knows the ropes. PacTel Communications Systems.

We took the time to evaluate all the available voice and data products so you won't have to. So while most voice and data suppliers sell you only the equipment they make, we set you up with the solutions you need.

We start by carrying only products designed with an Open Architecture, from such reputable manufacturers as Northern Telecom, Data General, Codex, Timeplex and C. Itoh.

Our rigorous evaluation ensures these products to be the most reliable, compatible and cost-efficient on the market today. Besides working with one another, they can

## H & R Block spurns bid to buy subsidiary

KANSAS CITY, Mo. — The board of directors of H & R Block, Inc. voted recently to reject an offer from the former head of its Compuserve, Inc. subsidiary to buy Compuserve for \$72.5 million.

Jeffrey M. Wilkins, Compuserve's former chairman and chief executive officer, was fired from his position by H & R Block last month.

Wilkins organized a group of investors in Ohio, Compuserve's home state, to buy back the computer services subsidiary, but the H & R Block board brusquely turned him down at a regularly scheduled board meeting May 8. Following the vote, Wilkins resigned from the parent company's board.

"Our conclusion has been

and continues to be that it would not be in the best interests of our company... to divert resources of Compuserve, which continues to play a key role in our strategy for corporate growth and profitability," said Henry W. Block, president and chief executive officer of H & R Block.

Wilkins had made offers

to buy smaller parts of Compuserve in the last six months. H & R Block executives had advised against diverting any amount of Compuserve, Block said.

Claudio W. McColl, Compuserve president and chief operating officer, was named chief executive officer. The rest of Compuserve's top management will remain.

## CDC buys part of DP service firm

SAN FRANCISCO —

BankAmerica Corp. announced recently that it has agreed to sell the California operations of its Datacom Data Services Corp. to General Data Corp. for an undisclosed amount of cash.

Datacom is a contract DP service company specializing in time-sharing services for small and medium-size banks.

The sale was the latest in a series of moves by BankAmerica to divest its DP businesses and concentrate on banking operations. Last month, BankAmerica sold Datacom's computer leasing operation to General Electric Credit Corp.

A CDC official said the acquisition represented a key strategic move for the Minneapolis-based firm, which is a vendor of high-end computer systems and time-sharing DP services.

"It provides us with a strong West Coast market for our rapidly expanding financial industry services," said David P. White, president of CDC's Business Services division.

## Miniscribe reports loss

LONGMONT, Colo. — Miniscribe Corp. recently announced a loss of \$12.6 million, or 67 cents per share, in the first quarter of 1986. The company's revenue for the three months ended March 31 was \$28.8 million, 30% lower than the \$33.9 million reported in the year-earlier quarter. In the first quarter of 1984, the company reported a profit of \$1.3 million, or 7 cents per share.

A spokesman for the microcomputer disk drive manufacturer attributed the first-quarter loss, like those of the previous quarters, to the cost of transferring production operations from Colorado to Singapore and Hong Kong. The spokesman also cited the costs of introducing Miniscribe's 844-in. and 5¼-in. disk drive product lines.

The company also announced formal completion of its previously announced \$20 million venture capital financing agreement with a group led by Hambrecht & Quist, a San Francisco-based investment firm [CW, May 6]. Gower said the transfer of disk drive production to the Far East would reduce Miniscribe's manufacturing costs by 30%.

also be integrated with most of the stand alone PCs, word processors and local area networks your office already uses. And with most of the new automation equipment you'll use in the future.

And when it comes to support, we won't leave you hanging. Whether you need something as simple as a few modems or as complex as a totally integrated digital voice and data system, we'll have it up and running in no time. And we'll back it up with our exclusive High Performance Service.™

So if you're up in the air about integrating voice and

data, remember the voice and data supplier that can get you there one step at a time.

# Datamart targets summer for opening DP showrooms

By Thomas Haffman

**SAN FRANCISCO** — Basing its claim off the fact of Boston's Business Computer Industry trade mart, Datamart is scheduled to open its doors late this summer.

The 100 million project from the Bay West Development Co. will be built in two phases near Shoreline Square Mall. Carrying a \$21 million price tag, Datamart's first phase will contain 175,000 sq ft to house approximately 60 year-round showrooms for computer-related companies. The second phase, slated for a 1990 completion date, will include 500,000 sq ft of space for 150 showrooms. The project is being financed by R.A. Marquette Co., a subsidiary of Bank of America National Trust & Savings Association.

Although to date only 10% of the first phase has been leased, Datamart President Richard Crouch said that the Datamart concept can work, despite the problems with Boston's CW April 85. He said Datamart wants to fill in where retailers left off, attracting visitors whose companies are not frequently targeted by direct sales firms. "We want to provide a medium for the manufacturer to sell directly and leverage its resources toward a large number of people," he said.

## Boston too early

Datamart predecessors like Boston were too quick to come up with a retail solution aimed by retailers and direct sales firms, according to Crouch. "Boston was too early a solution to the problem before the problem was recognized," he said.

Crouch said he expects Datamart to benefit from Boston's Infomart, which opened earlier this year (CW, Jan. 28). "Boston and Infomart were not daring to capture the market," he said, "interesting top billings like IBM and Xerox Corp."

However, it could be some time before large companies find their way to Datamart, because they are new to the mart concept, Crouch said. Some companies overestimated the amount of space they needed in Boston, according to Crouch, who said he believes the big commitments will start rolling in by the first quarter of 1986. "I'm not going to sign a lease with us until they know how much square footage they need," he said.

## Seeking 100,000 visitors

While Datamart continues its leasing efforts and its attempts to attract 100,000 visitors annually, Datamart officials said they will launch the center this fall with a variety of conferences for vertical markets. The first conference, slated for Sept. 16-18, will be "Computers in Finance." Other conferences will focus on applications for high-tech and health care industries.

One of the companies taking a wait-and-see approach to the Datamart concept is Acme Technology, Inc., which manufactures an integrated spreadsheet for a range of machines. The company signed a letter of intent to lease space at Datamart. "We happen to be looking for more exposure on the West Coast, and we're waiting to see what other companies [Datamart] can persuade," Acme Technology President Allan

Kushman said. While waiting for a field of participants, now limited to Spinn America, Inc. and Metastar Computer, Inc., Kushman is mulling over the types of services provided by the Datamart staff. Supplying a Datamart staff member at the booth site to demonstrate software products might be one way to make the participation cost-effective for his company, Kushman said.

Despite his promise to be in the software market, Apple Computer, Inc., has yet to participate in computer marts of any sort, according to company spokeswoman Susan Rodriguez. Somewhat more hesitant than Acme Technology, Apple is interested in seeing what results before it commits

to leasing space, she said.

## Study on trade marts

Crouch is not alone in his belief that a computer mart can succeed. Bill Maserve, senior management consultant at Arthur D. Little, Inc., wrote the study on computer industry trade marts for Planning Investments, Inc., a branch of the Boston project. Maserve also testified before the Senate Committee on Washington, D.C., in favor of building a 1.5 million sq ft worldwide trade mart across from the Washington Convention Center. "I am a believer that there is a market requirement for this type of facility," he said.

Trade marts will be regional in na-

ture, Maserve said. "Each region has its unique situations for drawing additional members to make their particular trade mart viable," he said. But across with a concept like a computer or trade mart will not come without attracting big names, according to Maserve. "You need a threshold. If you don't get a threshold, you run a substantial risk," he said.

Maserve has a four-year term for trade mart success. First, he said, it must be the site and not the vendors that attracts customers. Second, the building must be convenient for those coming to the show. Third, developers must provide the right facilities in support booths, and last, developers must promote the mart.

8000 Star Workstation

8000 Star Workstation

Matt's office has been winning a lot of new business lately. And it's really not much of a secret.

Because he and his co-workers have been able to make more efficient use of their resources. How? Well, Matt brought in Team Xerox.

Which includes Xerox 8000 Star

I heard  
you  
underbid  
us by half  
a million.  
What's  
your  
secret?"

Workstations, high speed laser printers, file servers for organizing and storing data and communications servers for accessing mainframe data bases, all linked together with a Xerox Communications Network. For complex analytical tasks, Xerox also included a Xerox Artificial Intelligence System.

So Matt (and the people in his domestic and international offices) could create, access, share and react to information more quickly and more easily than ever before.

And since Matt's office has become so much more productive, he was able

to cut costs—and enter a bid that was \$900,000 less than anyone else's.

To make Matt's secret yours, call Team Xerox at 1-800-833-2323, ext. 42 or send your business card to Xerox Corp., Dept. 4203, P.O. Box 24, Rochester, NY 14292.

## ONCE KNIGHT-RIDDER CHOSE AT&T THE FINANCIAL PICTURE LOOKED BRIGHTER.

In the demanding world of financial markets, everything depends on getting the right information. Fast.

For over 30 years, America's leading futures dealers have relied on Knight-Ridder's Commodity News Service. Now, Knight-Ridder is introducing a new service and they're relying on AT&T.

Only AT&T could provide the complete system Knight-Ridder needed for MoneyCenter, one of the most comprehensive financial market information systems ever developed. The system features personal computers, printers, local area networks, and custom-tailored modems. All supported by an unparalleled national service organization.

For traders, just a few seconds can mean millions of dollars in either profit or loss. Knight-Ridder chose the AT&T PC 6300 because of its incredible speed. And also because its high resolution screen is easy on the eyes.

As Knight-Ridder's services expand, their AT&T system can too. Our unique open architecture assures that any AT&T system is flexible enough to meet changing needs and permits our products to work with other vendors' products as well.

To find out why an AT&T system is the right choice for your business, call AT&T Information Systems at 1-800-247-3212, Ext. 535.

**AT&T**  
The right choice.

INTRODUCING THE HEWLETT-PACKARD TOUCHSCREEN

OFFICE AUTOMATION MADE EASY POINT BY POINT.

# II

The new Hewlett-Packard *Touchscreen II* personal computer is the mainstay of an office automation system designed to be easy.

Easy to learn ■ Easy to operate ■ Easy to place in an office information network.

In short, *Touchscreen II* makes it easy to be productive ■ Here are a few pointers.

## WHEN YOU SEE WHAT YOU WANT, POINT.

Sit down to work, and *Touchscreen II* displays a selection of application software on a high-resolution 12-inch screen.

Find the one you want to use, then touch the point on the screen where it appears ■ Instantly, the program is activated.

You're freed from typing complicated gibberish commands ■ Simply look, touch, and move on.

## THERE'S PLENTY TO POINT TO.

*Touchscreen II* allows you to choose from over 600 of the most popular business software packages ■ In addition, you can use Hewlett-Packard's own software library ■

With the new *Touchscreen II*, it's easy to put your finger on a problem (and a solution). Simply point at what you want.

When you take a look at the *Touchscreen II*, the first thing you'll see is our new high-resolution 12-inch screen.

Including our new Graphics Gallery, which offers you presentation graphics of a quality previously available only from larger computers. And, with HP's new Executive MemoMaker, it's easy to merge graphics with text—right on the screen.

Most of these packages are enhanced through the use of touch and soft keys, which execute complex commands in one stroke. This not only speeds the operation of *Touchscreen II*, it speeds the learning process required to use it.

### EVERYONE IN YOUR OFFICE WILL GET THE POINT.

*Touchscreen II* requires minimal orientation, even for the beginning user. This is largely due to an ingenious system called Personal Applications Manager, or PAM.

PAM displays program applications as English-language labels. These labels, when touched or activated through soft keys, get you into programs immediately.

PAM also enables you to accomplish a number of common jobs—such as switching from pc to terminal mode—with a single keystroke.

*Touchscreen II* is easily set up for peripherals like printers and plotters, thanks to the pictorial menu. Simply touch the pictures that match the devices in your system.

### GET YOUR POINT ACROSS.

*Touchscreen II* makes it easy to communicate.

Built-in terminal capabilities and a variety of data communication devices allow

*Touchscreen II* to exchange information with Hewlett-Packard, DEC and IBM host computers. Acting as a terminal,

*Touchscreen II* enables you to tap into the power of these larger computers, making use of their software, databases and peripherals.

*Touchscreen II* will also relay information among pc's (including IBM) and peripherals as the hub of a 3Com<sup>®</sup> Ethernet Local Area Network.

### A BIG HAND FOR OUR PERIPHERALS.

Plotters, LaserJet and ThinkJet printers, mass storage devices, user interfaces and more are available from Hewlett-Packard.

And they're all built to Hewlett-Packard's meticulous standards of quality. Not merely quality of construction. But a quality of thinking that precedes it.

If you'd like more pointers on the quality and simplicity of the new *Touchscreen II*, call us toll-free at 1-800-FOR-HPPC, Dept. 282A, for the name of your nearest Hewlett-Packard dealer or sales office.

The more you simplify, the more you'll produce. And productivity is, after all, the point of this discussion.

3Com<sup>®</sup> is a U.S. trademark of 3Com Corporation.

**HEWLETT  
PACKARD**

### Directories List 32,000 D P Users

Each directory of computer installations lists 15,000 computer users covering the NY Metro Area (NY, NJ & CT), and the Mid-Atlantic States (PA, VA, MD, DC, WV & DE). Each site includes a profile of the hardware installed, (language, databases, etc.), peripherals used, firm,

plan, applications and DP executive's names, titles, and phone numbers. An index provides quick access to 135 cross references by hardware, software and industry. Price: NY-6370 and MA-6205. Call (212) 463-0466. Computer Management Research, Inc. 20 Westside Plaza, NY, NY 10019.

### SUPERMARKETS

Intenson, Inc. has established an International Switching Products Division. The purpose of the division is to introduce and provide support to users of telecommunications and DP features for the company's line of video/data products interna-

tionally, the firm said.

GTE Supply has started a business unit to supply DP and information systems managers with data communications products.

The unit, called GTE Data Communication Products, markets a full line of items, including modems, multi-plexers, printers, protocol converters, terminals, workstations, connectors, cable, supporting equipment.

NEW, Inc. of Hudson, N.J., announced it has been named as a defendant in a \$4 million lawsuit filed by the Burton Group of Los Angeles.

The suit alleges breach of contract and other matters in connection with NEW's termination of its plans to acquire the Burton Group. NEW announced on Jan. 15 that negotiations were based primarily on the Burton Group's failure to meet all of the terms and conditions spelled out in the original letter of intent between the two companies.

Jerome Burpee, president of the Association of Data Processing Service Organizations, Inc., has been appointed to the industry sector advisory committee on electronic and instrumentation for trade policy matters. The committee acts as an advisory body on trade policy matters.

Atlantic Research Corp. has acquired the rights to manufacture and market a line of computer enhancement devices, called the M-40 series, which were developed and previously marketed by Oxyx, Inc. of McLean, Va. Atlantic Research established a subsidiary, Memory Sciences Corp., to market the M-40 line. George Dill, formerly president of Oxyx, is the president of Memory Sciences.

Amdahl Corp. has signed a distributorship agreement with Centel Business Systems, an operating unit of Centel Corp., under which Centel Business Systems will market Amdahl's data and voice communications products. Products covered by the renewable contract include Amdahl's 982 series of limited-distance modems, 983 series of data service unit/channel service unit products, and the 2211 time-division multiplexers. The announcement was made at the Communication Networks Conference and Exposition held in Washington, D.C., in January.

Centel also will provide field service and technical support for these products. Amdahl's worldwide sales organization will continue to market, service and support its line of communications systems products directly.

NIN, Inc. announced a recent out-of-court settlement with Datascan, Inc., a California-based corporation, for Datascan's alleged illegal copying of NIN Oxyx 3000 software.

NIN's complaint against Datascan, filed in 1983 with the U.S. District Court for the Central District of California, alleged copyright infringement, unfair competition, conversion and unjust enrichment.

## Novell introduces the best way to improve your network reception.

In a relatively short time, the local area network (LAN) market has attracted a host of members. Each has a LAN system to sell. And each is fighting for a proverbial piece of the LAN pie.

Avoid all these LAN contenders, only one company is out to make all LAN systems perform better. Only one company offers high-powered LAN operating system software that improves the performance of every major LAN system on the market. Only one company is building the job for other LAN makers begin.

The company is Novell. The company's solution is NetWare.

### NetWare performs.

How good is NetWare? In recent benchmark tests conducted by Novell as well as independent laboratories, NetWare significantly improved the performance of

every LAN system tested. In fact, NetWare currently runs on 54 different LAN hardware systems, outperforming the original software for every one.

### Serving all LANkind.

Whichever LAN hardware you choose, NetWare is the LAN software designed to get the most out of your network. When it's time to improve the reception your network gets from those who use it every day, plug into NetWare. It's from Novell, the people dedicated to serving all LANkind.

For more information, call or write Novell, Inc. 1770 N. Industrial Park Drive Orem, Utah 84057 (801) 226-8200.

## THE HP DOWN'S CONNECTED TO THE TRIM DOWN, THE TRIM DOWN'S CONNECTED TO THE KINE DOWN...

Only AT&T now offers the total networking solution for all your business communications.

By now, everyone knows how important it is to get all your office equipment working and communicating together. You also know how difficult it is.

Some networking solutions are fine for one function, but not so fine for another. Others are great in one neighborhood, but are lost outside of it. Still others are downright snobby about it all—they'll only work with their own kind.

AT&T can now put virtually all your equipment on speaking terms, no matter what it does, where it is, or whose logo is stamped on it.

It all starts with our Premium Distribution System (PDS), the only wiring scheme that connects local area networks, like our own Information Systems Network (ISN), or ADIT STARLAN PC Network; ADIT System 86 and ADIT System 76 PBXs; workstations; even IBM equipment.

To this full line of networking and communications products, AT&T now announces the following enhancements:

**PBX-2-AN Integration.** PBX for voice, LAN for data, and never the twain shall meet. Right? Wrong. PDS—the common wiring scheme we mentioned—brings them together.

Through it, our System 86 or System 76 PBX can now be fully integrated with our local area network ISN, giving you the powers of both in a single system. What's more, we've increased the number of lines System 76 can handle, and given it even greater networking capability.

Linking multiple ISNs and PBXs over a large area gives you a wide area network. So across the street or across the country, you'll get fast, efficient voice and data communications throughout your entire corporation.

**STARLAN Interfaced.** STARLAN is our new PC network. It links PCs, allowing them to exchange data. STARLAN interfaces links STARLANs. So our PC networks can work together as well as with other PCs, mainframes, or any devices hooked into ISN. Once again, credit the elegant simplicity of our common wiring system, PDS.

**ISN-Ethernet Bridge.** This essentially does for Ethernet Local Area Networks what STARLAN Integration does for STARLANs. It links multiple Ethernets into one large network. So terminals and devices on one Ethernet can communicate with those on another more effectively than ever before.

**IBM® Compatibility.** This off-board phrase usually has to do with IBM PCs. But here we're talking about something bigger—IBM mainframes and 3270 terminals. Now, with ISN or our PBX, you can consider those 3270s emancipated. Each terminal is free to access many IBM mainframes, rather than be enslaved to a single one. And low-cost dumb terminals can do the same.

A total networking solution may not be as difficult as you thought. All you've got to do is use the old headline, and make the right choice—AT&T. For more information call your AT&T Information Systems Account Executive, or 1-800-247-2222.

**AT&T**  
The right choice.

## COMPUTER INDUSTRY

## INDUSTRY

from page 71

might have to start updating their revenues when clients begin to add up the paper losses with which they've been hit.

The bankruptcy filing by Columbia Data Products, Inc. (CWP, May 18) raises yet again the potential of an embattled family of computers. Yet one of Columbia's large customers is not too worried.

Honeywell, Inc. resists Columbia Data machines under the Honeywell label, and last week the vice-president of Honeywell's Small Computer and Office Systems Group managed to find an element of good news to Columbia Data's Chapter 11 filing. Gene Manno, head of the Billerica, Mass.-based Honeywell division, said the protection from creditors that

Columbia Data will receive under the Federal Bankruptcy Act will enable the Columbia, Md., company to get its organization into shape.

Columbia Data, Manno said, "has continued to build and to deliver [under] its contracts." The filing will not affect Honeywell's sales, he said, because "the one we sell has the Honeywell label on it."

Nevertheless, Honeywell Vice-Chairman James J. Boring revealed that the company has been studying additional resale agreements with a number of other vendors and expects to make an announcement soon.

Regarding the industry slump that led his division to announce layoffs and enforced vacation periods,

Manno said, "It appeared to us early, and we were able to anticipate the first-quarter [downturn], but it is continuing into the second quarter."

## EXPORTS

from page 71

more Department) cast a very wide net," said Boston attorney Robert Brubaker, whose clients include Culbert Software, Inc., Computer Corp. of America and Applix, Inc. "There was a tremendous outcry so soon as the regulations were published. It was like saying you can drive your car, but you have to get permission from the police every time you drive it."

"The way [the regulations] were written, they could have been used to apply to anyone producing anything other than a [personal computer] spreadsheet or a video game."

Brubaker said the regulations would have been particularly restrictive to companies attempting to export software designed for data base management, computer-aided design

and manufacturing, microprocessor development, inventory and compiling and high-level language-based development systems.

"I think the folks in Washington, D.C., have no idea how many people are out there making software," Brubaker said. "When that dawned on them, they realized there wasn't enough paper to accommodate the flood of applications."

The regulations never officially took effect after they were announced. Their enforcement was delayed until February and again until April 25.

Adapco and Citicorp held seminars here and in Boston, San Francisco and Dallas to encourage opposition to the regulations. Approximately 250 industry representatives attended each seminar, according to an Adapco spokesman.

## RENIER

from page 71

gration and 30-year history in construction. With established customer bases in both areas, he said, "Customers are asking Honeywell to take on the systems integration role. This is especially true in the areas of industrial automation and office automation."

Renier said IBM "will sell a lot of mainframes [in the industrial automation] area, but won't dominate it like it has the financial industry and the insurance industry." The emerging market, he said, requires vendors that can provide large, value-added systems.

"One thrust, one company"

For years, Renier said, Honeywell purposely kept its mainframe business separate from its other businesses. Now, "we should have one thrust, one company, one organization," he added.

One element of that strategy is the decision made last year to resell NEC Corp. mainframes on top-of-the-line Honeywell DPS 90 machines. Renier said the company did not cut back expenses through that alliance because it "simply had never been doing research and development at the mainframe levels above the DPS 88," Honeywell's previous high-end machine.

Renier pointed to Honeywell's 20-year relationship with NEC, to which it recently sold its Japanese subsidiary, and said the business alliance was "very easy." He rejected industry perceptions that the relationship became strained when NEC challenged Honeywell for its business with General Electric Information Services Co. (Geleco).

The challenge for a new contract to supply the CPUs for Geleco's time-sharing networks was, according to Renier, "simply an event that occurs in the life of a business; there was a very obvious direction in which to go, and we did that." The agreement was the agreement to bundle Honeywell's operating system with NEC's large mainframe.

Regarding the current sales slump many vendors are experiencing, Renier said Honeywell recognized a trend last fall and tried to prepare for it. However, he noted, "The softening was deeper than we expected to see." Honeywell's Massachusetts-based Small Computer and Office Systems Group recently announced some layoffs and mandatory vacation periods (CWP, April 15).

## When the worst happens... You can get the best of it!

Your on-line processing begins at 8:00 a.m. At 4:00 p.m. there's a crash! Three vital files are gone — wiped out!

Now you're on the phone with the payroll supervisor. You think he's shouting something about printing checks, but you can't hear very well with the controller pounding on your desk. He's yelling in your face about billing and collections. And now, you see the inventory control supervisor heading for your office. He's waving the inventory printout over his head like a banner, and his face is lobster red!

Someone will be held accountable for this lost time and money... Will it be you?

## DATA RECOVERY SYSTEM

### Ensures Data Integrity

The Data Recovery System (DRS), from Sterling Software Marketing ensures data integrity and minimizes the problems associated with lost or corrupted data. Once you invoke DRS, the system automatically reconstructs data without the need for source documents.

### Restores Data Without Data Re-entry

Through journal processing, DRS provides forward data recovery to the point of failure. Now you can recover data without time-consuming manual file recovery and data reconstruction. You won't have to spend frustrating hours explaining or apologizing for disruptions or backtracking to locate lost entries. Using records which are journaled on an ongoing basis, DRS provides rapid data recovery, with minimum disruption to your critical online environment.

DRS also provides historical tracking and complete audit trail information. This enables you to analyze what went wrong, and helps you to prevent another emergency. In addition, DRS allows you to back out bad changes in files. And, with DRS's simulate mode you can see the effects of a recovery or reconstruction before you carry it out.

### Data Recovery System Ends The Data Loss Nightmare

For more information about Data Recovery System, call TOLL FREE 800-824-8512 or 916-835-5535, collect, in California, Hawaii, Alaska and Canada.

# POSITION ANNOUNCEMENTS

## COMPUTER PROFESSIONALS

As a major water and power utility in Arizona, maintaining top performance depends on our state-of-the-art computer technology. That's why we use sophisticated computer systems like the IBM 3084, IBM 3033, with MVS/3A, VM, CICS, and the IBM M3<sup>™</sup> added to this extensive off-line system of PC's and terminal/printers for data entry and the IBM 4381's that are used to support Distributed Data Processing. Our operating environment includes TSO/BPF, VM/CMS, 4 GL support development tools, and COBOL, along with a wide variety of structural methods.

If you have a degree in Computer Science, Business Management or Mathematics you owe it to yourself to talk to SFP. We're especially interested in speaking to computer professionals with at least 2 years of experience to fill these positions:

- DP TECHNICAL WRITERS
  - DATA BASE ADMINISTRATORS
  - DATA ANALYSTS/DATA MANAGER
  - DICTIONARY
  - COMPUTER OPERATORS
  - DATA MODELER
  - PROGRAMMER ANALYSTS
  - COMPUTER OPERATIONS ANALYSTS
  - SYSTEMS PROGRAMMERS
  - RESOURCE PLANNERS
- A VARIETY OF OTHER COMPUTER SPECIALISTS

SRP is talking your language! And, we can offer you the opportunity to work in a state-of-the-art IBM environment with top professionals in your field. Learn more about the unlimited recreational and cultural attractions of Phoenix, Arizona and our excellent compensation and benefits program. Send your resume and salary history to: S. Kranitz, Salt River Project, Dept. CV530, P.O. Box 53025, Phoenix, AZ 85072-3025.

# Perhaps The Greatest Development Challenge A Systems Professional Has Ever Faced...

## And You Will Be Right At The Center When You Join Us In The San Francisco Bay Area.

### We Are Talking About One Of The Largest Development Projects Ever.

Bank of America has undertaken one of the largest systems development projects ever by a financial institution. Upon completion, Bank of America's International Banking Systems will link over 2500 terminals spanning the globe from Frankfurt to London to New York to San Francisco to Hong Kong. Utilizing IMS DB/DC technologies, the entire project will be centrally managed from San Francisco, so you'll be able to take advantage of our vast technological resources.

### We Use Technological Sophistication And Strategic Ability To Build Value, Quality And Service.

You will be involved in the development of a fully-integrated real-time global banking system. This system uses the most advanced technology to achieve worldwide delivery of financial services. You'll work in a new, highly responsive, multi-technology development environment—one designed to provide development capabilities equal to the IMS challenge.

Initially, you'll be working in San Francisco and will later move to Bank of America's new Bay Area Technology Center.

### We Are Looking For The Right Experience.

We are particularly interested in talking with you if you have a proven

track record in banking/financial systems applications development, and have worked in a large scale IBM MVS, IMS, COBOL environment with integrated on-line IMS DB/DC based systems. Demonstrated hands-on experience with systems design, programming and testing in a mainframe environment is required. All positions require superior analytical, written and oral communications skills.

### We Have Unprecedented Opportunities Available Now.

We have openings in Systems Management, as well as a wide range of technical positions. If you have a solid background in MVS, COBOL, IMS DB/DC, IMS ADF, in an integrated on-line environment and have 3 or more years experience in design, programming, testing or project planning, we would like to hear from you.

Our Systems Architecture Group has openings for individuals with experience in IMS and MVS modeling and prototyping. Additional opportunities exist for candidates with knowledge of international banking applications, combined with a strong systems analysis background.

### We Respect Diversity, Recognize Contributions, And Reward Achievement.

We're looking for results-oriented innovators to play a major role in the development of our global systems network. We offer an outstanding salary, benefits and education package designed to attract and maintain top professional talent.

### We Are Prepared To Move Quickly. So Must You.

But we can't respond until we've heard from you. Please forward your resume and salary requirements to: Sr. Staffing Specialist, Global IMS Staffing, Dept. 5302-CW529, Bank of America NT & SA, P.O. Box 57000, San Francisco, CA 94137. An equal opportunity employer. Only direct applicant inquiries will be considered.

Share Our Strategy. Strengthen Our Team.

## Data Processing Professionals:

Participate in NEW developments  
utilizing on-line and DB technologies!

Northrop DSD, as a leader in the electronics industry with annual sales in excess of \$800 million continues to grow to meet the needs of its customers. Outstanding opportunities are available to those professionals who aspire to participate in new developments utilizing the latest in on-line and data base technologies.

### Systems Analysts

#### We seek:

- 5+ years experience utilizing CICS, DBMS, IMS/VS and COBOL.
- Background in total design/analysis of manufacturing engineering applications (e.g., Bills of Material).
- Degree or equivalent experience preferred.

### Data Base Analysts

#### We seek:

- 5+ years DB experience.
- 2 years DBMS.
- DBMS interests and related utilities, a plus.
- Experience interfacing with application development and information center for and user computing.
- Degree or equivalent experience preferred.

### Our Environment

Utilizes an IBM 308K running IMS/VS and DBMS, CICS command level, COBOL.

### We offer:

- Outstanding growth potential.
- Competitive starting salary and full range benefits package including tuition reimbursement, savings plan 401K, generous vacation plan, institutional coverage and retirement program.

For immediate consideration, forward resume with salary requirements to: Mr. David Rasmussen, Personnel Representative, NORTHROP CORPORATION, General Systems Division, 400 Hanks Road, Rolling Meadows, IL 60068. We are an equal opportunity employer M/F/V/H.

## NORTHROP

## SENIOR PROGRAMMER/ANALYST

Lancaster-based corporation seeks experienced professional for project leadership and the analysis and programming of business applications. Responsibilities will include defining, coding, testing and implementing new programs/systems from production specifications; providing design and programming needs in management; developing user guides and presentations of on-line systems; and maintenance of all on-line systems.

This individual will have at least two years' experience in:

- System analysis and design techniques
- DEC equipment, including VAX with VMS
- Structured programming techniques in COBOL

The successful candidate will possess an Associate's, B.A., or B.S. in Computer Science or six years' current experience in coding business applications, project supervision and coordination abilities, and complete knowledge of COBOL and BASIC languages using structured design methodologies. Good income and salary requirements to Person and Dept.

Technologies, Inc.  
Member of International Group of Related Group

Smith, Department Head, College of Technology, Michigan State University, East Lansing, MI 48824.

## The Key For Data Processing Professionals Seeking Growth

Advanced Programming Resources, Inc., a dynamic, growth-oriented national services organization is seeking for individuals in the SOFTWARE ENGINEER with 3-6 years work experience in telephony and database communication technologies to fill these positions:

### Software Engineers/ Hardware Engineers

- Real time software systems architecture, design, development, programming and maintenance
- Data communications equipment including synchronous and asynchronous protocols such as X.25
- Micro-processor-based software development and debugging network protocols and intelligent peripherals
- Operations support systems development
- Telecommunications systems planning, switching system requirements, call processing, power systems, test development and testing device design
- Structural programming and configuration control
- Hardware development for VLSI
- Signaling processing and switching
- CCITT signal systems 5, 6, 7
- Test cells
- Large software software experience

Individuals with B.S./M.S. degrees in Electrical Engineering and/or Computer Science preferred.

APR provides an excellent salary (commensurate with years of experience and education), along with fully paid company benefits. If you wish to be considered, please send your resume to: Advanced Programming Resources, Inc., 10000 High Street, Columbus, Ohio 43240, 614-464-3364. An equal opportunity employer, m/f.

The following openings are for Southern California and Marietta, Georgia. Applicants should possess an advanced degree and a minimum of 2 years' experience.

**Electronics & Electro-Optics**

Advanced Communications, Signal Processing, VLSI/VHSI, Image Processing, MMW, Image Fusion.

**Advanced Software**

Artificial Intelligence, Real Time AI, Reusable Software, Signal and Symbolic Processing Architectures.

**Fluid Dynamics**

Shear Flow, Vortex Flow, Turbulence, Hypersonics, Powered Lift, Combustion.

**Physics, Chemistry & Materials**

IR, Lasers, Electromagnetics, Wave Theory, Physical Chemistry, Polymer Chemistry, Metallurgy.

We also have openings in Scientific Computing for CRAY, VAX, and IBM Systems Management, Applications and Operations, Test Data Systems, and Networks.

Help start some of tomorrow's most exciting projects. Forward your resume in confidence to Director of Technical Development, Lockheed Advanced Aeronautics Company, Dept. 077-3, 2515 Avenue Stanford, Box 2, Valencia, CA 91355. Lockheed is an equal opportunity, affirmative action employer. U.S. citizenship is required.

The technical expertise responsible for some of the most dramatic accomplishments in aeronautics is coming together in a single organization.

Lockheed Advanced Aeronautics Company was formed to combine the spectrum of experience covered by the divisions of Lockheed-California, Lockheed-Gear, and Lockheed Aircraft Service Company.

This base of experience includes the C-6 airlifter, the TR-1 reconnaissance aircraft, the legendary SR-71 Blackbird, and numerous advanced modifications and systems integration programs. To apply this pool of experience to future projects, Lockheed has already committed more than \$100 million to the development of new facilities. A Weapons Systems Simulation Center of unmatched sophistication, a new research complex, and a CRAY supercomputer are just the beginning.

In addition to drawing on the most experienced personnel from other Lockheed divisions, Lockheed Advanced Aeronautics Company wants additional talent to build its new Advanced Research and Scientific Computing Organization.

**Lockheed Advanced Aeronautics Company**  
Giving shape to tomorrow.

**MANAGER OF M.I.S. RECRUITING**

Persons 50 or older is seeking a Recruiting Manager for the Management Information Systems area of the company.

The ideal candidate will have a minimum of 5 years experience recruiting personnel plus 2 years inside an experience in M.I.S. Ability to recruit and interview candidates with M.I.S. personnel required. A.S. degree in Information Systems or Computer Science a plus.

We offer a top salary and benefits including Paid Vacation.

# A Sunbelt Lifestyle and the Challenge of Growth

## For Systems Programmers

Live in one of the country's most growing cities. Sailing and other water sports is one way to spend your time. Golf, year-round on our famous courses. Play on the smooth sand of our beaches.

And answer our challenge. Make your professional success part of the success of the Southeast's largest bank holding company. Internationally our corporate offices spread from such cities as London, Hong Kong, and Chicago to such global cities as London, Hong Kong, and Sydney. We have begun the march toward interstate banking. Help us meet the challenge of our future.

### SYSTEMS PROGRAMMER

With a college degree and 3 to 4 years experience or, without a degree, 6 to 10 years experience. You would be installing and maintaining operating systems software. A strong working knowledge of MVS-JES 3 is needed. Applicants should have experience with CICS, MVS/2A, IMS.

DP Environment includes: IBM 3083 and 3033, MVS SP JES 3, TSO, CICS, VDM.

If you believe your skills can meet our needs... if your goals for success match our own... if you prefer the enriching quality of life our area can give: Contact us. Write or call Cathy Jervi, Personnel Manager, NCNB Personnel Division, COI-3, P.O. Box 25900, Tampa, Florida 33630 (813) 887-1157

**NCNB**  
Corporation

Equal Opportunity Employer M/F/H

## Programmer/ Analysts

We are seeking Programmer/Analysts to aid in the development and integration of an automatic flight scheduling system for the U.S. Air Force.

Positions will initially be located at our project for the Jet Propulsion Laboratory in Pasadena, California. Upon completion of development efforts, personnel will be assigned to the Pacific Northwest for the operational test and evaluation phases of the program.

Selected individuals will interface with customer and military personnel during the development, test and evaluation of the Distributed Information Control System (DISICS) for the Military Airlift Command. Candidates should have at least a Bachelor's degree in Computer Science or a related discipline, and a minimum of 5 years' experience in real-time scientific programming, as well as knowledge of FORTRAN, BASIC and Simulation Management Techniques. Experience networking IBM XT's is desired.

We offer a unique and challenging work environment and an excellent salary and benefits package, including a tax deferred option savings plan.

For consideration, please send resume including salary history to: Mr. James Langlois, ITT Federal Electric Corporation, Suite 201, 5000 E. Fortin Way, Pasadena, CA 91107

U.S. Citizenship required.

## Why should a Systems Programmer join Central and South West?

Because CSW provides an environment where your success is guaranteed. i.

- You enjoy working toward far-to-common objectives in a team environment but also enjoy planning and doing your own work
- You seek the opportunity to apply your knowledge
- You are motivated by your own professional pressure to do a job well

Currently opportunities are available for persons to apply CICS experience and for persons to apply MVS/ESA knowledge and/or experience as we move toward MVS.

- **Senior Systems Software Analyst - MVS**  
Will plan and implement MVS/ESA conversion. Will also provide technical support for MVS/ESA including installation, maintenance and problem determination. Could support VM and VSE.
- **System Software Analyst - MVS**  
Will assist in installation, maintenance and problem determination of MVS/ESA. Will assist in conversion activity for MVS/ESA.
- **Senior Systems Software Analyst - CICS**  
Will provide primary support for planning and implementing CICS and evaluating system performance. Will direct and monitor the work of others.

Our environment includes Amdahl 470 VEs and 380 with MVS, VM, VSE, JES2, TSO/ISPF, ACF2, IMSL, CICS, BMP, DPF and ROSCOE.

For immediate consideration, please send your resume and salary requirements to the Employees Relations Department, Personnel only.

Central and South West Corporation

P.O. Box 20084 • Dallas, Texas 75220

Employment Agency for Professionals

## INSTITUTE OF SYSTEMS SCIENCE NATIONAL UNIVERSITY OF SINGAPORE

We require Teaching and Development staff in the following areas:

- Information Resource Management
- Project Management
- Systems Development Methodologies
- Data Base Management Systems
- Data Communications
- Office Automation
- Microcomputer-based Information Systems
- Local Area Networks

### THE JOB

You will be working in small teams to develop short intensive courses aimed at upgrading the skills of executives, users, I/S managers and I/S professionals from organizations in Singapore and South East Asia. You will also participate in teaching a Diploma in Systems Analysis. In addition you will have opportunities to engage in consultancy and applied research. ISS provides a stimulating environment for state-of-the-art practitioners from a variety of backgrounds to interact and develop through close teamwork.

### THE INSTITUTE

Established in 1981 by the Singapore government, ISS is focused on promoting the rapid development of leading edge computerization both in the public and private sectors, and participating in the development of Singapore as a regional center for software development and services. Technical leadership is exerted through quality management education, advanced technical training, consulting services and applied research. ISS has excellent educational and computer facilities.

### SINGAPORE

Singapore is well known as a commercial, financial, industrial and communications center in South East Asia. Vigorous economic growth persists, and it has the second highest per capita income in Asia after Japan. American and British expatriates have consistently rated Singapore as one of their top 3 overseas postings.

### APPLICANTS

Applicants should have a strong practical background in at least one of the areas mentioned and be motivated towards a job involving a substantial portion of development and teaching of leading edge material.

Applicants for positions at a more junior level are likely to have 3-6 years of experience.

### COMPENSATION

Salary (to US\$60,000/year) is commensurate with experience. Benefits include an additional 25% Provident Fund contribution, heavily subsidized housing, medical and leave benefits, passage assistance and baggage allowance, setting-in allowance and children's education allowance.

Application forms and further information on conditions of service may be obtained from:

The Director  
Personnel Department  
National University of Singapore  
Kang Ridge  
Singapore 0611

Mr. Peter Lim  
Director, North America Office

# IMMEDIATE OPENINGS for COMPUTER SYSTEMS PROGRAMMERS (DATA BASE SPECIALISTS)

with the  
**U.S. NAVY FLEET MATERIAL SUPPORT OFFICE  
Mechanicsburg, PA**

Computer Systems Programmer positions are at the GS-9, GS-11, and GS-12 levels, with starting salaries ranging from \$21,804 to \$41,105.

Applicants for GS-9 must possess a background which includes 1 year of work in a GS-9 or equivalent level position which demonstrates a knowledge of computer requirements and techniques in carrying out project assignments consisting of several related tasks. Applicants for GS-11 must possess a background which includes 1 year of work in a GS-9 or equivalent level position which demonstrates accomplishment of computer project assignments that require a range of knowledge of computer requirements and techniques. Applicants for GS-12 must possess a background which includes 1 year of work in a GS-11 or equivalent level position which demonstrates accomplishment of computer project assignments that require a wide range of knowledge of computer requirements and techniques. At all grade levels the background and experience must demonstrate: (a) proficiency in the use of a particular assembly level programming language (e.g., ALGOL), (b) Knowledge of general techniques for analysis of system software requirements, and (c) skill in development and implementation of specifications for system software programs.

In addition to the above, all applicants must have experience in Integrated Database Management System (IDMS) or other CODASYL-style database management system such as IDS/II, DMS/1100, DBMS/10, EDMS.

Applicants must file a separate application for each grade level for which they wish to be considered.

Application forms (SF 171, Personal Qualifications Statement) are available at the Federal Job Information Center nearest you. These centers are listed in your local telephone directory under U.S. Government, Office of Personnel Management. Completed applications must be received at the following address no later than June 19, 1986.

### DATA PROCESSING MANAGER

We are looking for a talented professional to manage our present staff of programmers and operators and to participate in the implementation of a master plan to further automate our company. Responsibilities will include programming in RPG II and OCL and the configuration of hardware, software and communications requirements. In addition, you will provide scheduled and customized accounting, financial and management reports, analyze end-user requirements and provide for programming, training and documentation to satisfy these requirements.

Strong technical skills in RPG II and OCL programming are required. The successful candidate will have a B.S. in Accounting or Business with a minimum of 5 years' experience as a programmer/analyst. Supervisory experience in an IBM system 34/36 environment for a minimum of 2 years is also required.

Individuals interested in the above opportunity should send resumes plus salary requirements, in confidence, to the Director of Personnel.

## We're looking for a frustrated IDMS Data Base Administrator!

We're looking for the person who recognizes the power of IDMS as a software tool but is in an organization slow to utilize that power.

We are fully committed to IDMS. We have the latest in software — in fact, we were a Beta test site for IDMS Release 16.0.

Major new developments are underway and we need your IDMS expertise to support project teams in data base design.

Not only do we have full commitment to IDMS, we are also fully committed to training. Most importantly, our team environment affords the opportunity to apply your knowledge.

So, if you are ready for a positive change, let us know.

Please send your resume and salary requirements to the Employee Relations Department. Principals only.

Central and South West Corporation
